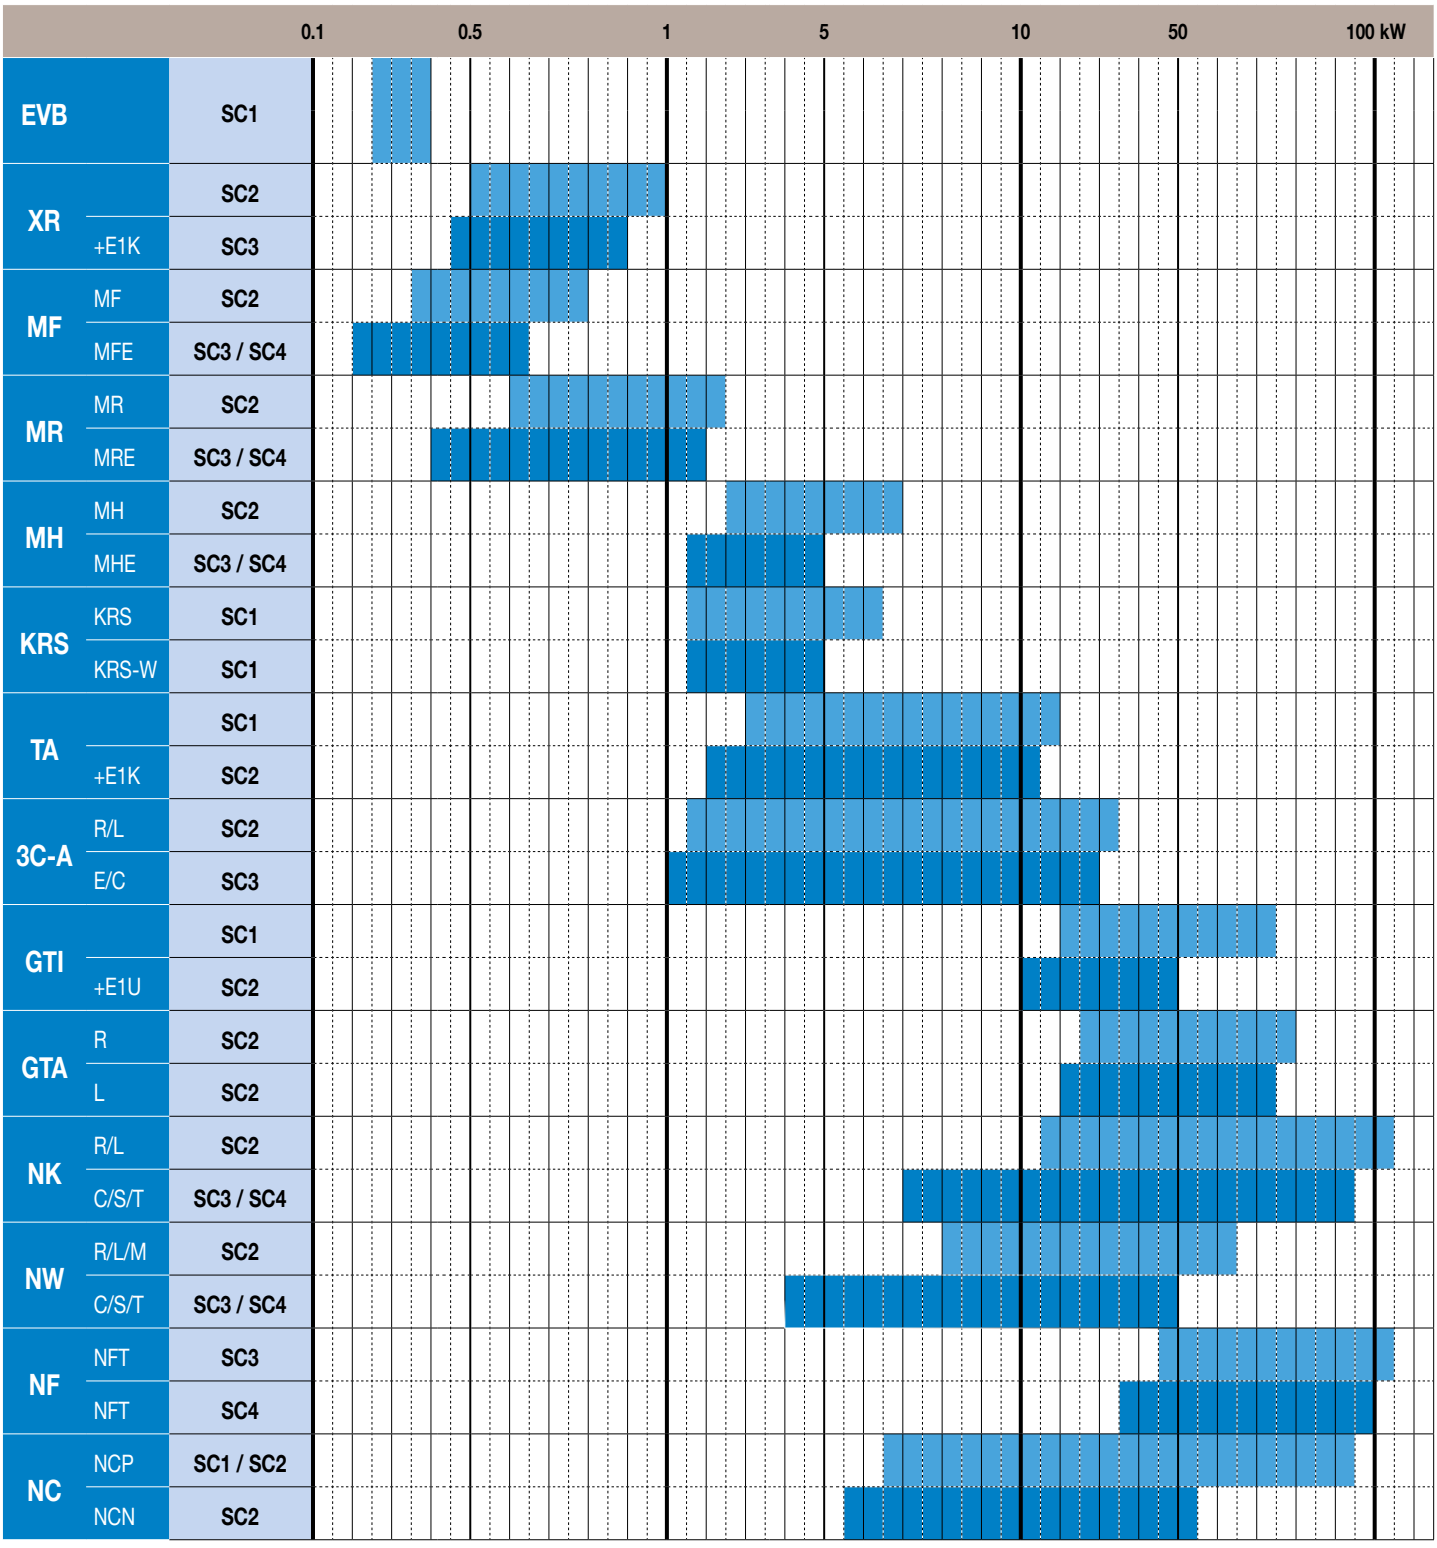
CONDITIONS STANDARD	t_{A1} - AIR INLET TEMP.	t_e - EVAPORATING TEMP.	DT1 STANDARD
SC1	+10 °C	0 °C	10
SC2	0 °C	-8 °C	8
SC3	-18 °C	-25 °C	7
SC4	-25 °C	-31 °C	6
SC5	-34 °C	-40 °C	6



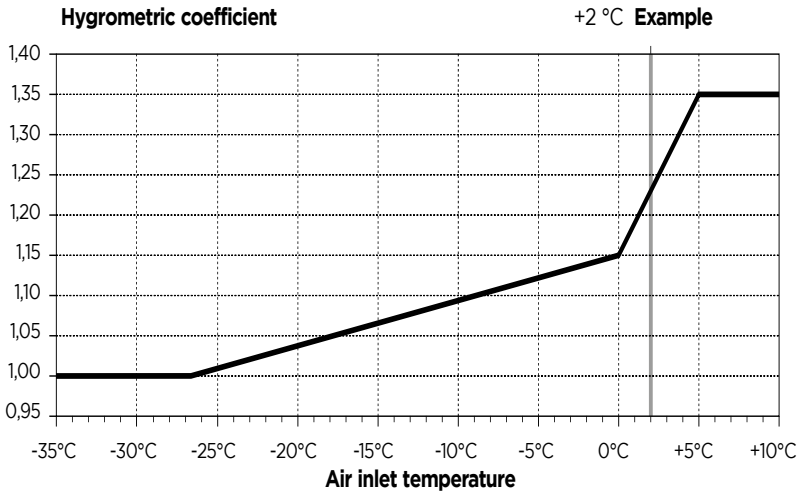
SELECTION COEFFICIENTS

Standard conditions

Standard conditions	t_{A1} Air inlet temp.	t_e Evaporating temp.	DT1 standard
SC 1	+10°C	0°C	10 K
SC 2	0°C	- 8°C	8 K
SC 3	-18°C	-25°C	7 K
SC 4	-25°C	-31°C	6 K
SC 5	-34°C	-40°C	6 K

Hygrometric coefficient

Standard conditions	Relative humidity	Nominal capacity / Standard capacity
SC 1	85%	1,35
SC 2	85%	1,15
SC 3	95%	1,05
SC 4	95%	1,01



Correction coefficient of DT1

For low glide fluids (less than 1K), or no glide, it is accepted that the capacity is directly proportional to the difference between the inlet air temperature and the evaporation temperature (DT1) i.e.:

$$\text{Required capacity} = \frac{\text{Nominal capacity x DT1 required}}{\text{DT1 standard}}$$

Fin material coefficient

Aluminium fin	Protected aluminium fin
1	0,97

Refrigerant coefficient

Refrigerant	R404A	R134a	R507A	R407A	R407C	R407F	R448A	R449A	R450A	R452A	R513A
SC 1	1	0,93	0,97	1,19	1,21	1,19	1,23	1,21	0,92	1,10	0,91
SC 2	1	0,91	0,97	1,24	1,26	1,24	1,26	1,23	0,91	1,12	0,91
SC 3	1	0,85	0,97	1,28	1,31	1,29	1,28	1,24	0,84	1,13	0,85
SC 4	1	-	0,97	1,32	1,36	1,35	1,31	1,26	-	1,15	-

Example

Whereby:

Capacity required	**Q = 6000 W**
Air inlet temperature	**t_{A1} = +2 °C**
Evaporation temperature	**t_e = -8 °C**
Refrigerant	**R 22**
Coil with protected fins	

In which case:
DT1 = tA1 - te = (+2)-(-8) = 10K

To select under standard conditions, the following correction coefficients must be applied:

- Relative humidity coefficient	**1,15/1,23 = 0,935**
- Correction coefficient for DT1	**8/10 = 0,8**
- Refrigerant coefficient	**1/0,95 = 1,05**
- Fin material coefficient	**1/0,97 = 1,03**

Expressed for given standard conditions, the required capacity of 6000 W becomes:

6000 x 0,935 x 0,8 x 1,05 x 1,03 = 4854 W

One therefore selects an **3C-A 3245 L**

On-board equipment

Our units are static. Included in a refrigeration system, they may be exited by motors, compressors, diesel engines, vehicles or others and suffer from vibration.
The person responsible for the system must ensure that the excitation frequency may not, under any circumstances, provoke the resonance of other components as this could result in irreparable damage (in particular in the case of on-board systems).

Description of the different protection options

	Different types of anti-corrosion treatments				Other anti-corrosion protection option
	BAE 1 Epoxy paint treatment	**BAE 2** Lacquered aluminium protection	**BXT** Blygold treatment	**BHE** Heresite treatment	**BIN** 304L stainless steel protection
Definition	**Epoxy** treatment *on the fins + end plates*	**Lacquered aluminium** foil, *only on the fins*	**Blygold** treatment *on the whole coil*	**Heresite** treatment *on the whole coil and on all the elements fitted before treatment*	**304L stainless steel** *Stainless steel or aluminium fins Stainless steel tubes Stainless steel guard plates*
Description	Very good flexibility, allows the coils to withstand thermal shocks without damage. Treatment thickness: 60-80µm.	Very good finish, high thermal conductivity, good drawing and low density.	Treatment thickness: 25-30µm. Composed of polyurethane, which allows the coil to have good thermal conductivity. No anti-bacterial treatment.	Low flexibility. High sensitivity to shocks. Treatment thickness: 75µm.	-
Method of application	**STAGES:** **1.** Cleaning and degreasing the coil **2. Spraying powder paint by hand using a spray gun and by robot** **3.** Oven drying at 190°C **4.** Visual inspection	Ready to use rolls of **lacquered aluminium**	**STAGES:** **1.** Cleaning and degreasing the coil **2. An operator sprays 4 criss-cross layers of polyurethane by hand** **3.** Drying at 20°C in the open air if the coil is > 80cm or in the oven at 80°C if the coil is between 50 and 80 cm **4.** Visual and endoscopic inspection	**STAGES:** **1.** Cleaning and degreasing **2. Several layers of resin applied by soaking** **3.** Oven drying at approx. 120-142°C **4.** Finished using a spray gun and dried in the oven at 180°C. **5.** Visual inspection	Ready-to-use rolls of **304L stainless steel**
Resistance to neutral salt spray *(tests carried out in accordance with the ASTM B117 and NF EN ISO 92/27 standards)*	**1500 hours**	**1000 hours**	**2500 hours**	**3500 hours**	-

ISO 12944 standard - Classification of environments

The **ISO 12944 standard** is a guide for choosing paint for steel structures that will ensure a certain level of durability in a given atmospheric environment.
The atmospheres are classified into 6 categories from C1 to C5-M.
In-situ or artificial laboratory tests make it possible to choose the most suitable coating.
This standard does not therefore apply directly to our products. However, we have used the classification of the different atmospheric environments and our neutral salt spray test results in order to provide you with an estimated classification for them.
The notion of durability does not constitute a warranty period.
It is an indication established according to the results obtained in salt spray tests.
A maintenance plan must be established to keep the heat exchangers in their original condition.
Not leaving deposits on their surfaces will in many cases avoid corrosive attack.

UNDER-COUNTER UNIT COOLER

COMMERCIAL RANGE

Bars / Hotels / Restaurants

HFC CO2*

240 > **410** W

EVB

- The EVB unit coolers meet the requirements of under-counter coolers and cooling units: compactness, hygiene and performance.
- Minimal thickness of only 8 to 8.9 cm depending on models.
- No condensation retention zones thanks to the ABS drain pan with rounded corners.
- The treated coil is standard as well as the stainless steel screws guaranteeing protection when used in a corrosive environment.
- Radial motor ensuring an excellent air distribution.
- 2 bi-lateral blower models available.

** Operating pressure 60 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

EVB - Commercial under-counter unit cooler

R404A | CO_2

DESCRIPTION

Casing

- **Aesthetics:** white casing.
- **Hygiene:** no condensation retention zones thanks to the ABS drain pan with rounded corners.
- **Compactness:** limited height and depth.
- **Anti-corrosion:** enamelled galvanized steel casing and stainless steel screws.

Ventilation

- **Anticorrosion** : turbine aluminium.

Coil

- **Anti-corrosion:** polyester coated coil.
- **Performance**: 5/16" tubes, low internal refrigerant volume.

Defrost

- **Defrost**: optional heater kit (a retrofit is particularly easy on an already installed unit cooler).

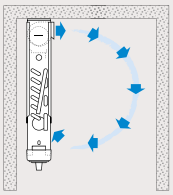
(1) Operating pressure 60 bar - Tube diameter to define the order.
(2) When the chamber size allows air circulation.
(3) Motor, class B, long-life bearings.

ADVANTAGES

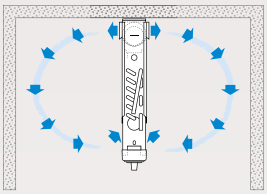
Installation

Easy reversing of casing and drain pan according to the site conditions to facilitate installation.

The models M1, M2 and M3 (wall mounting) are optimized with low space requirements and long air throw.



The models C1 and C2 (central mounting) ensure optimized air flow as well as partitioning of the zone in two sections.



Servicing / Maintenance

The unit cooler becomes totally accessible with easy removal of the "clipped" fan panel and drain pan rendering cleaning and maintenance far simpler.

435 > **1030** W

XR

- The XR range is designed for use in refrigerated cabinets, bars, under-counter unit and small storage cold rooms: compactness, hygiene and performance.
- Wall or ceiling mounted.
- Directional ABS intermediate drain pan reduces the condensation effect on panelling.
- Coil with aluminium fins spaced at 4.23 mm totally treated as standard.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

XR - Commercial ceiling unit cooler

DESCRIPTION

Casing

- Aesthetics white-enamelled galvanized steel and plastic casing.
- Intermediate drain pan for ceiling mounting, to limit water condensation.
- Single cardboard box packaging.

Ventilation

- The electric fans Ø 200 mm (photo n°1) used in the XR range are of the enclosed, single-phase type, 230 V, 50-60 Hz, class B, permanently lubricated delivered with a one meter long 3 x 0.75 mm2 cable:
  - 4P = 1,500 rpm, impedance-protected motor (low noise level).
  - 2P = 3,000 rpm, motor with thermal overload protection incorporated (high performance).

Coil

- The finned coils of the XR range are designed with corrugated aluminium fins with polyester finish (photo n° 2) with fin spacing of 4.23 mm and internally grooved copper tubes.

CERTIFICATIONS

ADVANTAGES

Installation
"Keyhole" fastening requiring only one person.
Drilling template printed on the cardboard packaging.
8 knock-out holes for passage of tubes and cables.
Factory provided as ceiling-mounted model. Simple transformation into a wall-mounted model.
4 drain pipe positions possible when ceiling mounted (2 for wall mounting) in order to offer the user the maximum volume available (photo n°3).
Servicing / Maintenance
Access to all components from the front.

MR / MRE

- The 28 models in the MR range meet the requirements of small storage cold rooms.
- Low depth of only 209 mm enabling optimum use of storage space in the cold room.
- Sturdy and corrosion-resistant unit, coils totally anti-corrosion treated as standard, ABS casing and stainless steel screws.

** Operating pressure 60 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MR / MRE - Commercial ceiling unit cooler

DESCRIPTION

Casing

- The ABS recyclable casing guarantees a high quality with regard to:
- **Sturdyness**: high thermal (at low and high temperatures) and mechanical shock resistance.
- **Aesthetics**: the design, finish and granulated white casing enable perfect integration of the unit into the surrounding environment.
- **Hygiene**: no condensate retention zones favouring the development of harmful germs thanks to the casing with rounded corners and no corrosive elements (for example: stainless steel fastening screws).
- **Safety**: no sharp or cutting edges.

Ventilation

- The MR and MRE models are equipped with a 50-60 Hz, Ø 200 mm fan with an enclosed motor, class B, impedance protected, permanently lubricated, connected in a junction box (except for MR 75/65) (photo n°1).
- Fan guards compliant with safety standards.

Coil

- The highly efficient and compact MR range finned coils are designed with corrugated surface aluminium fins (fin spacing 4.23 or 6.35 mm) and internally grooved copper tubes.
- The coils are supplied via Venturi distributors for models MR 160/140 to MR 270/250 and MRE 135/120 to MRE 270/250.
- The entire MR coil has a polyester paint protection coating, particularly important for corrosive environments (photo n°2).

Defrost

- The electric heating element is fitted in slots under the coil. This layout considerably simplifies maintenance and guarantees homogenous dispersion of heat over the entire coil. This enables perfect defrosting.
- Condensate is collected in an intermediate drain pan then drained through a large condensation drain fitting (Ø 1" G).

Kit	Factory	
		Coil
	WCO	Glycol water, coolant (please contact us for details).
	CO2	R744 optimization (please contact us for details).
		Defrost
E1K	**E1U**	Light electric defrost: MR...R and MR...L.
	THD (MRE)	For low temperature cold storage rooms with end of defrost thermostat with single-pole, reversing switch at +12 (±3 K) and delayed fan start up +2 (±3 K), supplied with a sensor and fastening bracket.
		Fully equipped unit coolers
	DMP	Expansion valve fitted.
	EEC	Fully equipped unit cooler: - Expansion valve fitted. - Solenoid valve fitted. - Piping pre-fitted with a ball valve (siphoning function provided by the collector).

ADVANTAGES

Installation

The expansion valve may be supplied factory pre-fitted (option DMP), as well as fully equipped (option EEC) to help reduce installation time.

Servicing / Maintenance

The MR range has been designed for easy commissioning, maintenance and cleaning.
Casing fitted with polyamide hinges (photo n°3) to provide total access to all unit cooler elements (coil, electric fan, defrost heater, connections,...).
These hinges also enable removal of the casing.

The electric heating elements are fitted in slots under the coil offering unimpeded front access which considerably simplify maintenance (MRE).

FRIGA-BOHN

HK® REFRIGERATION

MH / MHE - Commercial ceiling unit cooler

DESCRIPTION

Casing

- Sturdy and sober casing made of white pre-painted sheet steel.
- Its low depth enables optimum use of storage space in the cold room.

Ventilation

- The MH range is fitted with factory wired axial fans:

Ø 300 mm: 230V 50-60 Hz, single-phase, IP42, class B.

- The fan guards are compliant with safety standards.
- 2 to 4 fans are necessary to cover the requirements of the entire range of capacities.

Coil

- The highly efficient and compact MH range finned coils are designed with corrugated aluminium fins (fin spacing 4.23 or 6.35 mm) and internally grooved copper tubes.
- The coils are supplied via a Venturi distributor.

Defrost

- Shielded electric heating elements are inserted in slots both on the front and rear coil faces.
- One of these shielded heating elements is also fastened in slots under the coil. This slot assembly guarantees homogenous dispersion of heat over the entire coil.
- The defrost heating elements are factory connected to a terminal block (MHE range only).
  - 230V/1 power supply for all models MHE 320E, 380E and 250C, 310C.
  - 400V/3 power supply for models MHE 460E, 550E, 640E, 770E and 370C, 450C, 510C, 630C.

ADVANTAGES

Installation

The expansion valve may be supplied factory pre-fitted (option DMP), as well as fully equipped (option EEC) to help reduce installation time.

Servicing / Maintenance

The MH range has been designed for easy commissioning, maintenance and cleaning.
The casing is fitted with hinges offering total access to all elements of the ceiling unit cooler (coil, fan, defrost heater, connections,...).

The electric heating elements are fitted in slots under the coil offering unimpeded front access which considerably simplified maintenance.

KRS / KRS-W

- KRS direct expansion and glycol water (KRS-W) refrigeration cassettes are compliant with workplace requirements: noise level, hygiene, ventilation and aesthetic quality.
- Vibration damper pads placed under the motor help reduce the noise level.
- Drip tray under the coil and condensate discharge pump.
- 6 motor speeds with 3 pre-wired as standard enabling precise setting of the air flow-rate.
- 4 adjustable deflectors guarantee smooth air distribution in all directions.
- Unit body totally encased in the false ceiling.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

KRS / KRS-W - Commercial refrigeration cassette

DESCRIPTION

Casing
- The casing of the KRS range is made of double-insulated galvanized sheet steel: inside with a polyurethane shell and on the outside with a thick, closed cell, foam insulating layer.
- Equipped with a drip tray under the coil.

Diffuser
- Its high aesthetic quality is perfectly adapted to all environments.
- Made of smooth ABS, white colour, it has an interior insulation lining to eliminate the risk of condensation.
- A manually adjustable deflector system enables distribution of air in four directions.

Ventilation
- The KRS range is equipped with 6-speed centrifugal fans with high static pressure and air flow efficiency.
- 3 speeds are factory pre-wired on each model. It is possible to select 3 other intermediate speeds depending on noise level requirements (refer to the table opposite).
- The motors are of the type, single-phase, 230V, 50Hz- Hz, class B with internal thermal overload protection.
- The fan blades are specially designed for this range and provide a high air flow-rate while guaranteeing a low noise level.

Coil
- The high-performance and compact finned coils are composed of aluminium fins crimped onto copper tubes:

Aluminium fins	KRS	KRS-W
Spacing	2,81 mm	2,1 mm (KRS-W1) 1,81 mm (KRS-W2)
Epoxy protection	yes	no
Grooved copper tubes	yes	no

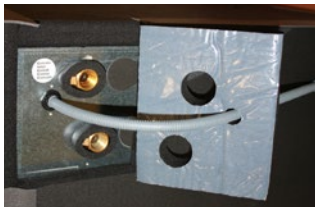
Condensate discharge pump
- The maximum discharge height is 650 mm in relation to the pump height.

CERTIFICATIONS

ADVANTAGES

Installation

The KRS cassettes are delivered with a condensate discharge pump with float switching device.



The pre-cut insulation foam is easy to fit and guarantees total isolation of the casing once all tubes have been connected.

Servicing / Maintenance

The casing is designed to offer complete access to all components rendering maintenance tasks easier (photo n° 1).

The washable filter clipped onto the diffuser is easily accessible and has a stand-by position for cleaning (photo n° 3).

ABS 7

HFC CO2* W GLYCOL

2 > **22** kW

TA

- The 40 models in the TA range meet the requirements of laboratories, cutting and work areas, air locks, etc...
- Exceptionally low noise levels with the 6 or 8-pole models.
- The low air flow speed guarantees comfort as well as accurate control of both temperature and hygrometry.
- Optimised air throw up to 12 m.
- Sturdy and corrosion-resistant unit, coils totally anti-corrosion treated as standard, ABS casing and stainless steel screws.
- An intermediate drain pan avoids condensation on the casing.

** Operating pressure 60 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

TA - Commercial dual-discharge unit cooler

DESCRIPTION

Casing

Aesthetics and accessibility

The recyclable ABS casing of the TA guarantees a high level of quality and finish.

Sturdiness

Highly resistant to thermal shocks.

Aesthetics

The TA unit blends easily into its surroundings thanks to the casing with integrated fan guard.

Hygiene

Rounded corners eliminate condensate retention zones which favour the development
of harmful germ, use of protected steel sheets and stainless steel screws.
Internal drain pans to avoid condensation on the casing.

Safety

No sharp or cutting edges.

Ventilation

- The TA range is equipped with bell mounted electric fans Ø 350 mm.
- The motors are of the enclosed type, single-phase with a capacitor, 230 V, 50-60 Hz, IP 55, class F and internal overload protection.
- Available in the following versions: 4-pole = 1,500 rpm, 6-pole = 1,000 rpm or 8-pole = 750 rpm, depending upon the admissible noise level.
- The fan guards, incorporated into the casing, are compliant with safety standards.

Coil

- The highly efficient and compact TA range finned coils are designed with corrugated aluminium fins (fin spacing 3.63 or 6.35 mm) and internally grooved copper tubes.
- The coils are supplied via a Venturi distributor.

CERTIFICATIONS

DESIGNATION

TA 5(1) **R**(2) **6P**(3)

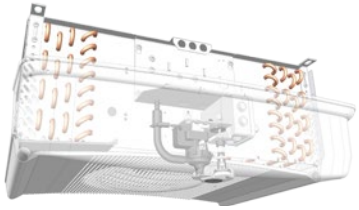
(1) Model
(2) Fin spacing: **R** = 3.63 mm - **L** = 6.35 mm
(3) **4P** = 1,500 rpm, **6P** = 1,000 rpm or **8P** = 750 rpm

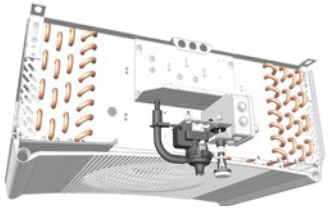
ADVANTAGES

Installation

Simple installation and commissioning with easy access to the expansion valve (see photo).

A condensation evacuation pump may be provided factory-mounted in the casing to help reduce installation time (option **PRK**).





Evacuation of condensation on left or right side.

Servicing / Maintenance

Hinged drain pan offering easy access to all components (see photo).

The electric heating elements fitted in slots under the coil considerably simplify maintenance tasks (see photo).

OPTIONS

Kit	Factory	
		Coil
	BAE	Paint coil protection.
	BXT	Blygold Polual XT coil protection.
	WCO	Glycol water, coolant (please contact us for details).
	CO2	R744 optimization (please contact us for details).
		Defrost
	HGB	Hot gas coils.
E1K	**E1U**	Light electric defrost.
2TH		**TH 5709L**: end of defrost thermostat with single-pole, reversing switch at +12 °C (±3 °C) and delayed fan start up +2 °C (±3 °C). **THS 5708L**: single-pole thermostat for overheating protection set at +24 °C (±3 °C). Recommended with electric defrost.
		Fully equipped unit coolers
PRK		Condensate discharge pump.
	DMP	Expansion valve fitted.
	EEC	Fully equipped unit cooler: - Expansion valve fitted. - Solenoid valve fitted. - Piping pre-fitted with a ball valve (siphoning function provided by the collector).

LENNOX
EMEA

CUBIC UNIT COOLER

COMMERCIAL AND SEMI INDUSTRIAL RANGE

Bars / Restaurants - Corner shops - Mini-markets
Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres
Food processing

HFC CO2* W GLYCOL

1 > **35** kW

3C-A

- The 3C-A range is designed for commercial and semi industrial refrigeration applications or low temperature storage.
- Numerous electric, hot water or hot gas defrost possibilities.
- Wide choice of options for specific environment (streamer, stainless steel, ...).
- EC motor (optional) enables optimization of noise level and power consumption.

** Operating pressure 60 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

3C-A - Cubic commercial and semi industrial unit cooler

DESCRIPTION

Casing

- The aesthetic, white pre-painted galvanized sheet steel casing enables easy cleaning of the unit.
- Articulated drain pan with rounded corners to eliminate condensate retention zones and no sharp or cutting edges to guarantee total safety.
- Hinged intermediate drain pan to help limit condensation (3C-A .. E/C).

Ventilation

- High efficiency motor fan factory wired.
- EC fans available as an option (electronic commutation).
- Fan guards are compliant with safety standards.
- The 3C-A unit cooler range is equipped with axial fans, requiring no routine maintenance:

	models	temp.	voltage	frequency	IP	class
Ø 300 mm 4P 1320 r.p.m.	3C-A 3XXX R/L	+	230V/1	50/60Hz	44	B
	3C-A 3XXX E/C	-	230V/1	50/60Hz	44	B
Ø 450 mm * 4P/6P 1320/1070 r.p.m.	3C-A 4XXX R/L	+	400V/3	50Hz	54	F
	3C-A 4XXX E/C	-	400V/3	50Hz	54	F

* Two-speed motorfans, high speed wired (Δ) by default.

Coil

- The highly efficient and compact 3C-A range finned coils are designed with aluminium fins (fin spacing 4 or 6 mm) and internally grooved copper tubes.
- The coils are supplied via a Venturi distributor.
- Coils for using the same unit cooler in positive or negative application.
- Multi refrigerant (HFC) coil.
- CO_2 or water glycol as an option on the entire range.

Defrost

- Depending on the condition in the cold room, different level of defrost capacity are available factory wired or delivered as kits (see table below).
- Shielded electric heating elements are inserted in the sleeved tubes in the finned coil.
- One of the heaters is fastened under the intermediate drain pan. This facility enables homogenous heat distribution for fast and efficient defrosting.
- 230V/1-phase, 230V/3-phase or 400V/3-phase connection possible.
- **3C-A .. E/C range:** standard, the heaters are factory wired to a terminal block in a sealed junction box and connected for 230V/1 and 400V/3.
- **3C-A .. R/L range:** optional heaters and wiring (E1U and E2U).
- The condensate is recovered in an intermediate drain pan and then drained via a large drain fitting (Ø 1"G).
- Hot gas or glycol water defrost in option.

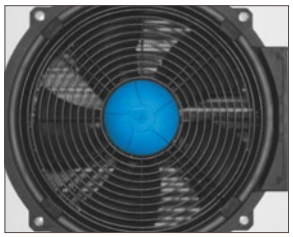
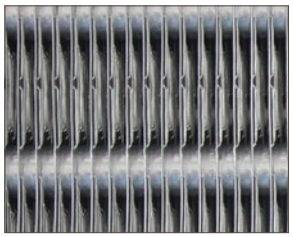
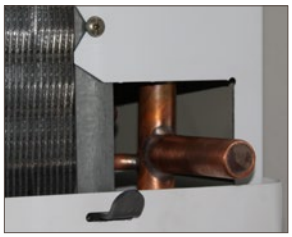
3C-A - Cubic commercial and semi industrial unit cooler







OPTIONS

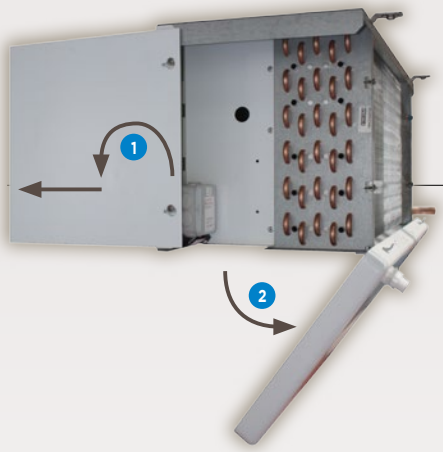
Kit	Factory	
		Casing
	PEI	White painted casing.
	CIN	Stainless steel frame.
	EIS	Insulated drain pan.
DPK		Intermediate drain pan Kit (3C-A .. R/L).
		Ventilation
	M23	Fan 230-400V/3/50hz (Ø 450mm).
	MM5	Fan 230V/1/50Hz (Ø 450mm).
	M60	Fan 230-400V/3/60hz (Ø 450mm).
	MP5	High air pressure fan 400V/3/50Hz (available air pressure 50Pa - Ø 450mm).
	2V5	2 speed 400V/3/50Hz fan assembly (Ø 450mm).
RFA		Shell / air stream deflector (streamer).
VGT		RFA + mounting parts for textile duct.
MSD		Flexible defrost sleeve.
VPM		VGT + MSD
	EC3	Dual speed EC fans (electronic commutation).
		Coil
	BAE	Paint coil protection.
	BXT	Blygold Polual XT coil protection.
	BHE	Heresite coil protection.
	WCO	Glycol water, coolant (please contact us for details).
	CO2	R744 optimization DX (please contact us for details).
		Defrost
	HG1	Hot gas (coil: hot gas, drain pan: electric heating elements).
	HGT	Hot gas (coil and drain pan).
	DEG	Hot glycol water defrost.
E1K	E1U	Light electric defrost: 3 coil heaters
E2K	E2U	Intermediate electric defrost: 2 coil heaters + 1 drain pan heater + intermediate drain pan.
E3K		Full electric defrost: 5 coil heaters + 1 drain pan heater + intermediate drain pan.
RVK	RVU	Shell defrost heaters.
HDA		Suction hood defrost.
2TH		Defrost and safety thermostats (5709L + 5708L).
THD		Defrost thermostat (5709L).
THS		Safety thermostat (5708L).
		Fully equipped unit coolers
	DMP	Expansion valve fitted.
	EVL	DMP + solenoid valve fitted.
	EEC	EVL + copper siphon equipped with a ball valve delivered not fitted.

AVANTAGES

Installation / Entretien / Maintenance

Large space available for easy installation of the expansion valve.

Large electrical enclosure rendering maintenance tasks easier.



1 Easy removable side panels and 2 articulated drain pans (interior and exterior), offering fast and easy access to all unit cooler elements (coil, fans, defrost heaters, connections...).

APPLICATION OF OPTIONS

Homogenous distribution of air flow

RFA option - Air stream deflector (streamer)
Provides increased air throw, optimized air flow and efficient distribution of air in the cold room.

Application requiring installation of a textile duct

VGT option used to fasten the textile duct (not supplied).

Defrost for low-temperature applications

VPM option - Shell / air stream deflector (streamer) + flexible defrost sleeve
Avoid circulation of hot air during defrost cycles.
Reduction of defrost cycle time for energy saving.

GTI / GTA

Direct expansion industrial range GTI / GTA
Glycol water industrial range GTI-W / GTA-W

- The GTI and GTA ranges meet the workplace comfort requirements for laboratories, meat cutting rooms, air locks, etc...
- Exceptionally low noise levels with the 8P (GTI) and EC motor (GTA) models.
- The low air flow speed guarantees comfort as well as accurate control of both temperature and hygrometry for the 8P models.
- The 2-speed electric fans guarantee appropriate noise levels and ventilation (GTA).

** Operating pressure 50 bar*

FRIGA-BOHN

HK® REFRIGERATION

GTI (-W) / GTA (-W) - Dual-discharge industrial unit cooler

DESCRIPTION

Casing

- The GTI (-W) and GTA (-W) casing is made of white pre-painted galvanized steel.
- On the GTA (-W), each removable drain pan (in 1 or 2 sections depending on the models) are fixed or hinged (**BCS** option). The condensats is evacuated via 2 large dimension drain pipes.
- GTI (-W) and GTA (-W) models are foreseen with end covers.
- GTI (-W) and GTA (-W) are delivered on a wooden base.
- GTA (-W) are delivered in their mounting position and designed for installation flush to the ceiling.

Ventilation

- The GTI (-W) unit cooler range is equipped with fans Ø 450 mm, 230-400 V/3/50 Hz: **4P** = 1,500 rpm - **6P** = 1,000 rpm - **8P** = 750 rpm
- The GTA (-W) unit cooler range is equipped with fans Ø 630 mm, 400 V/3/50 Hz, IP 54, class F, with incorporated thermal overload protection, 2 speeds depending on models: **4P** = 1330 rpm - **6/8P** = 890 / 690 rpm.
- Fan guards are compliant with safety standards.

Coil

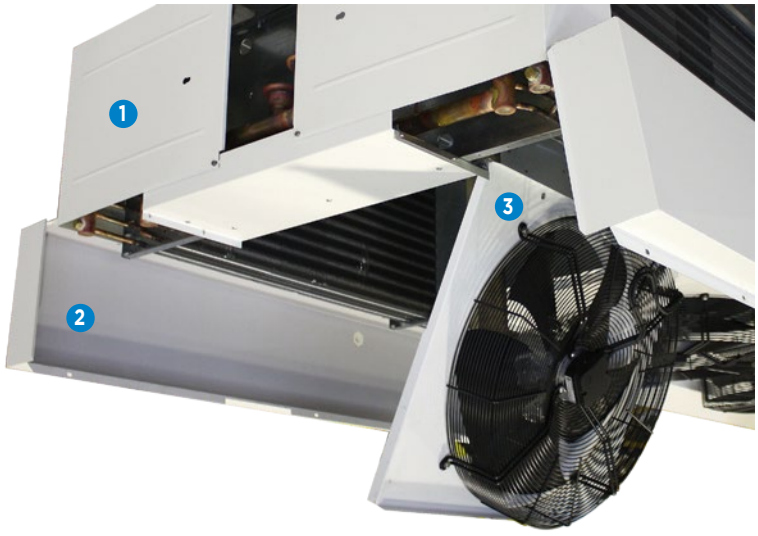
- **The GTA range is equipped with two new coil configurations optimized for direct expansion and glycol water applications.**
- The highly-efficient and compact standard finned coils of the GTI (-W) and GTA (-W) range are composed of aluminium fins with a spacing of 4.23 or 6.35 mm.

CERTIFICATIONS

DESIGNATION

GTI(1)-W(2) 34(3)4(4) 4P(6)
GTA(1)-W(2) 36(3) R(5) 6D(7)

(1) **GTI / GTA**: Direct expansion unit cooler
(2) **W**: Glycol water unit cooler
(3) Model
(4) Fin spacing: **4** = 4.23 mm - **7** = 6,35 mm
(5) Fin spacing: **R** = 4.23 mm - **L** = 6,35 mm
(6) **4P** = 1,500 rpm - **6P** = 1,000 rpm - **8P** = 750 rpm
(7) **4D** = Delta connection - 1,330 rpm
6D = Delta connection - 890 rpm
6Y = Star connection - 690 rpm



ADVANTAGES

Installation

The GTA (-W) are equipped with easily removable doors 1 thus providing easy access to electrical and coolant connections.

The GTA are supplied in assembly position.

Possibility of supplying a connection kit (option **EGK**) for the glycol water model to render installation easier.

Servicing / Maintenance

For all work on the GTA (-W), access to the drain pans does not require removal of the recovery vessel 2 and the fan units are mounted on an articulated panel 3 rendering maintenance work easier.

OPTIONS

Kit	Factory	
		Ventilation - GTI / GTI-W
	M60	Fans 230-400V/3/50-60Hz (adapted fan blades).
		Ventilation - GTA / GTA-W
	EC1	EC motors 400V/3/50-60Hz.
	EC2	EC motors 230V/1/50-60Hz.
	C3V	3-speed selector switch (motors EC1 and EC2).
	CMU	Motors factory wired.
	M60	Fans 400V/3/50-60Hz (adapted fan blades).
		Coil
	BAE	Protection of fins.
	BHE	Heresite coil protection.
	BXT	Blygold Polual XT coil protection.
	WCO	Glycol water, coolant (please contact us for details).
	CO2	R744 optimization (please contact us for details).
EGK		Glycol water and coolant extension.
		Defrost - GTI / GTI-W
E1K	**E1U**	Light electric defrost.
	HGB	Hot gas defrost (coil only).
		Defrost - GTA / GTA-W
	E1U	Light electric defrost.
	ELU	Electric defrost (coil + drain pan).
	HG1	Defrost with hot gas (coil: hot gas, drain pan: heating elements).
EEK		Drain pan electric defrost.
ECK	**ECU**	Additional coil electric defrost.
		Miscellaneous
	BCS	Hinged condensate tray (**GTA / GTA-W**).
	CIN	Stainless steel frame (**GTA / GTA-W**).
	ECB	Wooden crate packaging (**GTA / GTA-W**).
	EIS	Insulated drain pan.
		Other options
		Please contact us for details.

(1) Standard conditions (Eurovent) : SC2 / 0°C (air inlet temp.) / -8°C (evaporating temp.) / DT1 = 8K
(2) Residual air speed: 0.25 m/s, in compliance with standard.
(3) Average sound pressure level in dB(A) measured at 4 m, at fan height, in direct line of sight on a reflective surface, given for information only.
(4) Optional electric defrost kit.
(5) Setting of overload protection levels.
(6) Distributor: Male to be brazed.
(7) ODF = Female to receive a tube of the same diameter.
(8) Operating pressure 50 bar - Tube diameter to define the order.

*** Glycol water -** Capacity indicated for information only under the following conditions:

Fluid: Percentage of glycol = 30 %
Fluid inlet temperature = - 8°C
Fluid outlet temperature = - 4°C.

Air: Inlet dry temperature = + 2°C
Relative humidity = 85 %
Limitation of head loss at 10 m WC maximum.

Other conditions:
Possible optimization of exchanger circuiting according to the operating level.
System head loss taken into account, percentage of glycol,... (please contact us for details).

Connection kit available:
- 1 kit for horizontal connection (please consult us).
- 4 connection kits (please consult us).
  - steel weld-on sleeve
  - steel screw-on sleeve
  - steel weld-on sleeve
  - steel screw-on sleeve

CUBIC UNIT COOLER

INDUSTRIAL RANGE

Refrigerated storage and transit stocking
Food processing
Dispatch centres

HFC CO2* W GLYCOL

7 > **130** kW

NK

- The NK range is designed for industrial refrigeration, conservation or deep-freezing applications.
- **NK version T** (large heat-exchange surface):
  - Adapted to humidity-sensitive products.
  - Reduced number of daily defrost cycles offering a reduction in electrical power consumption.
- **NK version H** (high efficiency):
  - Adapted to the storage of packed products.
- Wide range of options for specific industrial applications (pressure sleeve, defrost...)
- 4 fin spacing distances: 4,23 - 6,35 - 9 - 12 mm.
- 2 fan diameters for air throw adapted to the application.
- Two-speed fans as standard.

** Operating pressure: NKT 40 bar - NKH 50 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

NK - Cubic industrial unit cooler

DESCRIPTION

Casing

- The casing is made of pre-painted, galvanized steel offering a high resistance to corrosion and impact damage.
- An internal aluminium drain pan limits the effects of condensation under the main drain pan during the defrost process.
- The NK unit coolers are delivered in mounting position in reinforced crates (ECB option).

Ventilation

- The external rotor fans are equipped with fan guards compliant with safety standards.
- 2 fan types are used for the NK range:
  - Ø 630 mm 4/6 pole (1500/1000 rpm)
  - Ø 800 mm 6/8 pole (870/630 rpm).
- The motors are of the three-phase type, 400V, 50Hz, IP54, class F.
- Selection of a unit cooler with various fan number/diameter combinations offering the dimensional and air throw characteristics best adapted to the size of the cold room.

Coil

- The finned coils of the NK range are designed with aluminium fins spaced at 4,23 - 6,35 - 9 or 12 mm, crimped onto copper tubes.
- Two types of fins are available depending on the application:
  - High-efficiency H type fins for an economical solution.
  This type of fin is particularly suitable for the storage of packed products.
  The reduced size of the heat-exchanger also enables fast defrosting.
  - T type fins with a large heat-exchanger surface. This type of fin limits dehydration of products. It also saves energy by reducing the number of defrost cycles per day;
- The coils are supplied via optimized R404A diaphragm distributor(s).
- For all other refrigerants, please contact us and specify when ordering.

Defrost

NKH ... C, NKH ... S, NKT ... C, NKT ... S, and NKT ... T

- The shielded electric heating elements are inserted in sleeves located in the finned coil, 2 or 3 heating elements are placed under the intermediate drain pan.
- This facility enables homogenous heat distribution for fast and efficient defrosting.
- The heaters are factory connected to a 400V/3 power supply on a terminal block in a junction box.
- Total gas defrost (HGT) or partial (HG1) available as optional extra.

NKH ... R, NKH ... L, and NKT ... L

- Light electric defrost (E1U) and "low temperature" electric defrost (ELU) models available as optional extra.
- The light electric defrost (E1K) is also available in kit form.
- A water defrost (DAE) option is available for room temperature equal to or greater than +4° C.
  In this case the unit cooler depth is increased by 40 mm.
- Maximum water flow-rate with NK:
  1 fan = 5 m3/h. - 2 fans = 10 m3/h.
  3 fans = 15 m3/h. - 4 fans = 20 m3/h.

CERTIFICATIONS

DESIGNATION

NKH(1) 3x6(2) D(3) B2(4) R(5)

(1) Fin type: **T** = Large exchange surface - **H** = High-efficiency fin
(2) Number of fans x Ø: **6** = Ø 630 mm - **8** = Ø 800 mm
(3) Motor connection: **D** = Delta - **Y** = Star
(4) Module
(5) Fin spacing: **R** = 4,23 mm - **L/C** = 6,35 mm - **S** = 9 mm - **T** = 12 mm

ADVANTAGES

Installation

Electrical and refrigerant connections easily accessible for simple installation.

The height-adjustable leg supports enable floor mounting of the unit (**KMS** option).

Servicing / Maintenance

Side panels 1, fan panels (**VSC** option) 2 and drain pan in galvanized steel are hinge-mounted: easy intervention, maintenance and cleaning.

External installation of fans offering easy access for possible interventions.

OPTIONS

Kit	Factory	
		Ventilation
	CMU	Motors factory wired.
	C2V	Motors wired for 2 speeds.
	M60	Electric fans 230-400V/3/60Hz.
VPA		Air pressure shell also allowing the connection of a textile duct.
	VSC	Hinged fan panels.
		Coil
	BAE	Protection of fins.
	BHE	Heresite coil protection.
	BXT	Blygold Polual XT coil protection.
	WCO	Glycol water, coolant (please contact us for details).
EGU		Glycol water extension (please contact us for details).
	CO2	R744 optimization (please contact us for details).
		Defrost
	DAE	Water defrost.
	DEG	Hot glycol water defrost.
E1K	E1U	Light electric defrost (coil + drain pan).
ECK	ECU	Additional coil electric defrost.
	ELU	Electric defrost (coil + drain pan).
HDA		Suction hood defrost.
VPM		Flexible defrost sleeve + air pressure shell.
	HG1	Hot gas defrost (coil: hot gas, drain pan: electric heaters).
	HGT	Hot gas (coil and drain pan).
RVK	RVU	Shell defrost heaters.
		Miscellaneous
	CIN	Stainless steel frame.
	ECB	Wooden crate packaging.
	EIS	Insulated drain pan.
KMS		Floor-mounting legs.

PRE-SELECTION

*Add defrosting:
E1U for a room temperature between +4 °C and +2 °C,
ELU for a room temperature between +2 °C and -5 °C.

APPLICATION OF OPTIONS

C2V option (2-speed wiring)

Adapted ventilation and noise level:
High speed during the charging phase requiring high capacity.
Low speed during the long storage period or in case of presence of employees for reduced noise level.

VPM + HDA option

Defrost for low-temperature applications :
Avoid circulation of hot air during defrost cycles.
Reduction of defrost cycle time for energy saving.

VPA option

Homogenous distribution of air flow:
Increased air throw, optimized air flow and efficient distribution of air in the cold room.

Application requiring installation of a textile duct:
Shell for textile duct with air stream deflectors (ducts not provided).

* ***Ø 630 mm*** : 400 V/3/50 Hz - Δ = 1500 rpm - 1900 W max - 3,2 A max - Y = 1000 rpm - 1350 W max - 2,2 A max (7)
* ***Ø 800 mm*** : 400 V/3/50 Hz - Δ = 870 rpm - 1900 W max - 3,9 A max - Y = 630 rpm - 1100 W max - 2 A max (7)

(1) Standard conditions (Eurovent) : SC2 / 0°C (air inlet temp.) / -8°C (evaporating temp.) / DT1 = 8K
(2) Operating pressure 50 bar - Tube diameter to define the order.
(3) Residual air speed: 0.25 m/s.
(4) Average sound pressure level in dB(A) measured at 4 m, at fan height, in direct line of sight on a reflective surface, given for information only.
(5) Electric defrost options.
(6) Electric defrost kit.
(7) Setting of overload protection levels. For air temperatures "ti" other than +20 °C, multiply the currents in relation to 293/(273 + "ti")
in order to obtain an approximate current value after the room temperature is attained.

* ***Ø 630 mm*** : 400 V/3/50 Hz - Δ = 1500 rpm - 1900 W max - 3,2 A max - Y = 1000 rpm - 1350 W max - 2,2 A max (7)
* ***Ø 800 mm*** : 400 V/3/50 Hz - Δ = 870 rpm - 1900 W max - 3,9 A max - Y = 630 rpm - 1100 W max - 2 A max (7)

(1) Standard conditions (Eurovent) : SC3 / -18°C (air inlet temp.) / -25°C (evaporating temp.) / DT1 = 7K - SC4 / -25°C (air inlet temp.) / -31°C (evaporating temp.) / DT1 = 6K
(2) Operating pressure 50 bar - Tube diameter to define the order.
(3) Residual air speed: 0.25 m/s.
(4) Average sound pressure level in dB(A) measured at 4 m, at fan height, in direct line of sight on a reflective surface, given for information only.
(7) Setting of overload protection levels. For air temperatures "ti" other than +20 °C, multiply the currents in relation to 293/(273 + "ti")
in order to obtain an approximate current value after the room temperature is attained.

LENNOX
EMEA

BLAST FREEZING TUNNEL UNIT COOLER

INDUSTRIAL RANGE

Food processing

HFC CO2* W GLYCOL

4 > **63** kW

NW

- The 54 models of the NW range meet the requirements of rapid deep-freezing and refrigeration applications.
- The high air flow speed guarantees extremely rapid refrigeration of food.
- The height-adjustable legs favour homogenous distribution of air over the products.
- Available air pressure of up to 200 Pa.
- Large heat-exchanger surface, large fin spacing of 6,35 - 9 or 12 mm and optimized defrost.

** Operating pressure 40 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

NW - Industrial freezing tunnel unit cooler

DESCRIPTION

Casing

- The casing is made of pre-painted galvanized steel offering a high resistance to corrosion and impact damage.
- Intermediate aluminium drain pan to protect against the risk of condensation.

Ventilation

- Two types of fans are used in the NW range:

Axial fans

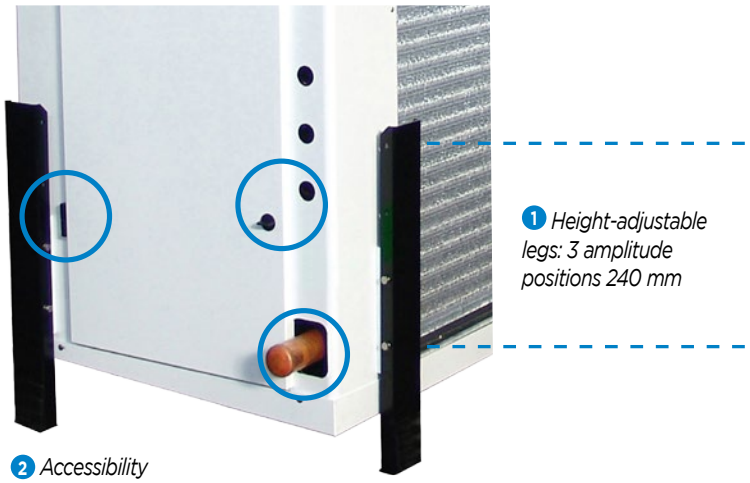
Models A - Externally mounted, their fan guards are compliant with safety standards. Three-phase external rotor motors, 400 V, 50 Hz, IP54, class F, 4 P (1,500 rpm), permanently lubricated, internal thermal overload protection. Available air pressure of up to 100 Pa.

Centrifugal fans

Models C - "Twin inlet" type with direct drive.
Three-phase enclosed motors, 230/400V, 50 Hz, IP54, class F, 4 P (1,000 rpm), permanently lubricated, internal thermal overload protection.
Available air pressure of up to 200 Pa.

Coil

- The high-performance and compact finned coils of the NW range are designed with flat-surface aluminium fins spaced at 6,35 - 9 or 12 mm, crimped onto copper tubes.
- The coils are supplied via R404A optimized Venturi distributor(s).
- For all other refrigerants, please contact us.



1 *Height-adjustable legs: 3 amplitude positions 240 mm*

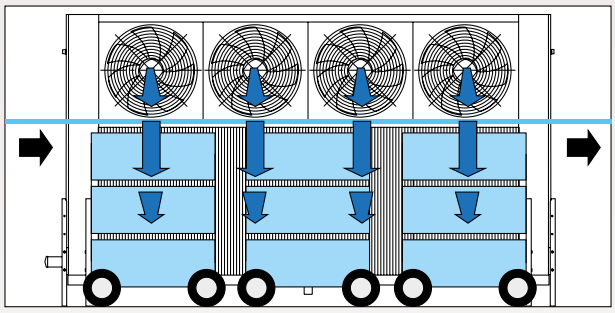
2 *Accessibility*

DESIGNATION

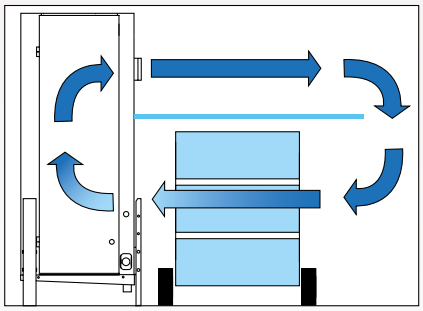
NW 11(1) **A1**(2) **S**(3) **100Pa**(4)

(1) Model
(2) **A** = Axial fan - **C** = Centrifugal fan / **1** = Number
(3) Fin spacing: **R/C** = 6,35 mm - **L/S** = 9 mm - **M/T** = 12 mm
(4) Available pressure

CERTIFICATIONS



Deep-freeze tunnel principle with an NW



ADVANTAGES

Installation
Installation of the unit up against a wall allows maximum filling of the cold room.
The height-adjustable feet favour homogenous distribution of air over the products 1
Two blowing positions possible: horizontal (H2) vertical (H4).
Floor mounting system for easy installation and maintenance.
Servicing / Maintenance
Easily removable main aluminium drain pan.
Hinged side panels offering easy access to electrical and refrigerant connections 2

OPTIONS

Kit	Factory	
		Ventilation
	CMU	Motors factory wired.
		Coil
	WCO	Glycol water, coolant (please contact us for details).
	CO2	R744 optimization (please contact us for details).
		Defrost
	DAE	Water defrost.
	E1U	Light electric defrost.
ECK	ECU	Additional coil electric defrost.
	HGT	Hot gas (coil and drain pan).
RVK	RVU	Shell defrost heaters.
		Miscellaneous
	ECB	Wooden crate packaging.
		Other options
		Please contact us for details.

BLAST FREEZING TUNNEL UNIT COOLER

INDUSTRIAL RANGE

Food processing

HFC CO2*

35 > **130** kW

NF

- High capacity of up to 110 kW.
- The high air flow speed guarantees extremely rapid refrigeration of food.
- Large heat-exchanger surface and large fin spacing of 9 mm.

** Operating pressure 40 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

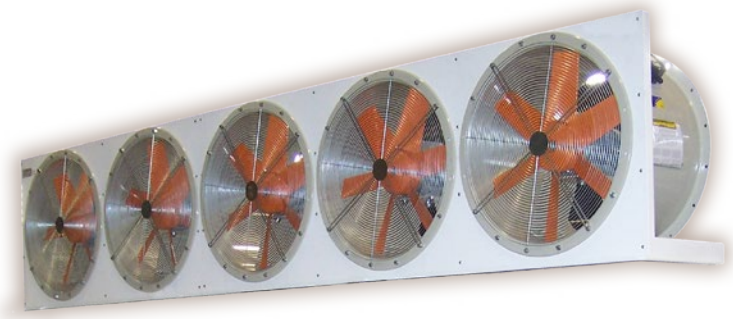
NF - Industrial blast freezing tunnel unit cooler

DESCRIPTION

Ventilation
- Fan delivered separately and installed above the coil.
- Fans Ø 710 mm 230/400 V/3/50 Hz, IP 55, class F.

Coil
- Coil with staggered copper tubes and embosed aluminium fins.
- Fin spacing of 9 mm.

Defrost
- Drain pan under the entire heat-exchanger.
- Electric defrost.

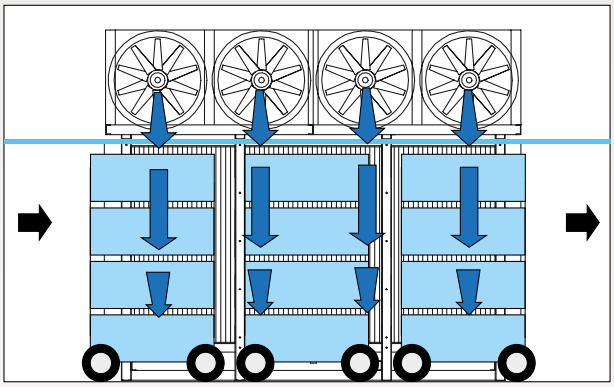


DESIGNATION

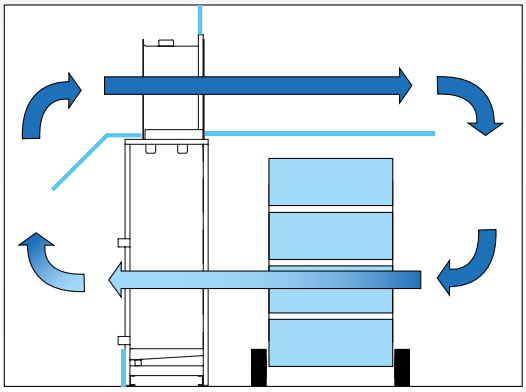
NFT(1) **280**(2)

(1) Fin spacing: **NFT** = 9 mm
(2) Model

CERTIFICATIONS



Deep-freeze tunnel principle with an NF



ADVANTAGES

Installation

Due to the unit height, the NF is supplied in 2 parts:
- a coil, frame, drain pan and heater assembly,
- a fans assembly.

Servicing / Maintenance

Inclination of the drain pan towards the largely dimensioned drain pipe (Ø 1 1/2" G) to avoid accumulation of soiling and render cleaning easier.

OPTIONS

Kit / Factory	
	Coil
CO2	R744 optimization (please contact us for details)
	Miscellaneous
ECB	Wooden crate packaging.

CENTRIFUGAL UNIT COOLER

INDUSTRIAL RANGE

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres
Food processing - Canteen kitchens

HFC CO2* W GLYCOL

5 > **95** kW

NC

- The NC range is designed for use in cold rooms or work areas.
- Centrifugal motors delivering an available pressure of up to 200 Pa.
- Wide choice of options for industrial applications.
- 4 blowing positions possible.
- Floor or ceiling installation.

** Operating pressure 50 bar*

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

NC - Industrial centrifugal unit cooler

DESCRIPTION

Casing

- Compact and sturdy, it is made of white enamelled galvanized steel.
- External aluminium drain pan.
- Intermediate aluminium drain pan to reduce the condensation effect.

Ventilation

- Direct-drive, "twin inlet" centrifugal type fans.
- Pressure of up to 200 Pascals available.
- Rotation speed 1,000 rpm.
- Enclosed motors with internal thermal overload protection, IP 54 class F, designed for operating conditions between -40 °C and +70 °C.

Coil

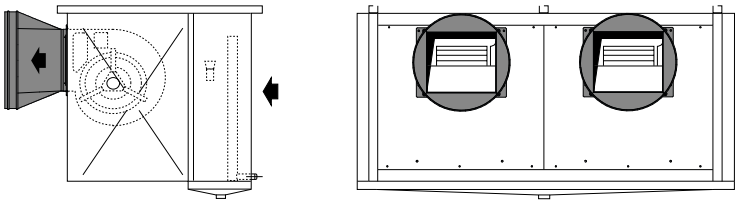
- The coils of NC unit coolers are designed with aluminium fins spaced at 4.23 mm (model P) or 6.35 mm (model N) crimped to staggered copper tubes Ø1/2" (12.7 mm).

CERTIFICATIONS

APPLICATION OF OPTIONS

Application requiring installation of a textile duct

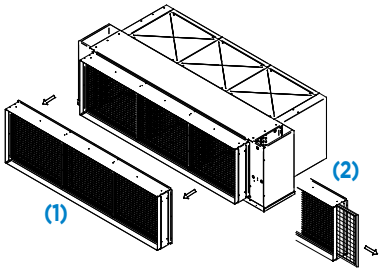
VGT option
Circular shell for connection of textile ducting (ducts not provided).



Air intake filter and ducting

FLA option
gravimetric air intake filter.

CFA option (1)
The enclosure enables connection of an air intake duct; the filter may be removed from the side of the enclosure for easy servicing (2).



Adapted power and noise level, thermal insulation

VVU / VVK option
modulated voltage speed controller. Guaranteed acoustic comfort at low and medium speeds for employees in the vicinity.

IPH option
10 mm thick insulation to help reduce the sheeting vibration and provide thermal insulation of the unit to limit the effect of condensation.

DESIGNATION

NCP(1) **6294**(2) **H3**(3)

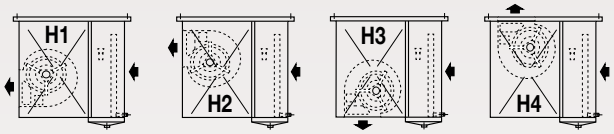
(1) Fin spacing: **NCP** = 4,23 mm - **NCN** = 6,35 mm
(2) Model
(3) Air direction

ADVANTAGES

Installation

The design concept enables floor or ceiling installation and offers easy access to all components.

4 blowing positions available (to be indicated when ordering).



Later modification is particularly easy.

Possibility to supply an optional speed controller factory fitted or in kit form (**VVU/VVK**) for optimization of the "power/noise level" ratio.

Servicing / Maintenance

Direct-drive centrifugal fans require no specific maintenance.

The external aluminium drain pan may be easily removed.

Easy access to the distributor.

(1) Additional pressure available in Pascals.
(2) Standard conditions : SC2 / 0°C (air inlet temp.) / -8°C (evaporating temp.) / DT1 = 8K
(3) Average sound pressure level in dB(A) measured at 4 m, at turbine height, in direct line of sight on a reflective surface, given for information only.
(4) Setting of overload protection levels. For air temperatures "ti" other than +20 °C, multiply the currents in relation to 293/(273 + "ti")
in order to obtain an approximate current value after the chamber temperature is attained.
(5) Electric defrost option.
(6) Operating pressure 50 bar - Tube diameter to define the order.

* Only for turbines : 230V/1/50Hz

Technical characteristics obtained with speed controller VVU or VVK:

VVU and VVK : 831 - 1622 - 2393

VVU Option with factory fitted speed controller.
VVK Speed controller kit shipped with the unit cooler chosen.

- Switching cabinet IP54.
- Single-phase electronic voltage regulator
- Potentiometer controller.
- One voltage regulator per fan.
- Setting of minimum voltage.
- Electrical wiring diagram.

VVK : 1591 - 3162 - 4693 - 6294

This option is in kit form shipped with the unit cooler chosen.

- Electromechanical voltage regulator.
- Manual rotary switch.
- Five stepped rotation speeds.
- Electrical wiring diagram.

On-board equipment

Our units are static. Included in a refrigeration system, they may be exited by motors, compressors, diesel engines, vehicles or others and suffer from vibration. The person responsible for the system must ensure that the excitation frequency may not, under any circumstances, provoke the resonance of other components as this could result in irreparable damage (in particular in the case of on-board systems).

Selection

'**P**' = condenser total heat of rejection.
In the absence of specific documents, "**P**" may be calculated using one of the two tables (previous page), based on the refrigeration capacity "**Q0m**". To define a model, the application conditions and the selection conditions must be harmonized. To do this, the required capacity "P" must be divided by the 5 coefficients indicated below. For that,'**P**' should be divided by the 5 following factors:

C1 Altitude factor
C2 DT1 factor
C3 Ambient temperature factor
C4 Refrigerant factor
C5 Fin material factor

according to the formula:

$$P1 = \frac{P}{C1 \times C2 \times C3 \times C4 \times C5}$$

Select a model in the table corresponding to the rotation speed chosen and check that the noise level corresponds to level required. If this selection process enables the choice of models **L** or **P**, without dimensional prerequisites, choose the least expensive model. In the same way, to define the capacity "**P**" of a model under conditions other than those indicated in the documentation, the following formula is applied:

P = P1 x (C1 x C2 x C3 x C4 x C5)

Example

Required capacity '**P**'	58 kW
Altitude	200 m
DT1	14 K
Ambient temperature	+30 °C
Refrigerant	R134a
Coated aluminium fins	0,97
Sound pressure level at 5 m (measured on a parallelepiped surface)	37 dB(A)

Whereby: **C1 = 0,99 - C2 = 0,93 - C3 = 0,98 - C4 = 0,93 - C5 = 0,97**

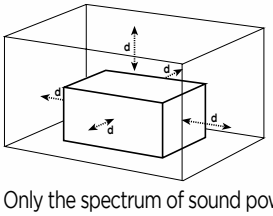
in which case:

$$\frac{58}{0,99 \times 0,93 \times 0,98 \times 0,93 \times 0,97} = 71,5 \text{ kW}$$

Sound pressure level in the conditions of the tables.
Distance correction = 6 dB(A)
37 - 6 = 31 dB(A)
The **NEOSTAR SE 16D P02 D2** will be selected.
Sound pressure level at 10 m = 31 dB(A)
Note : If the noise level is very different, then select a model from the other tables.

Noise levels

Noise level LpA :
The sound pressure level Lp indicated in the characteristics tables was measured at 10 metres, direct line of sight on a reflective surface in compliance with standard EN 13487 (parallelepiped reference surface). The relationship between sound pressure Lp and sound power Lw is derived from the following formula:



$$LpA = LwA - 10 \log \frac{Si}{So}$$

Si = parallelepiped surface for d = 10 m
So = reference surface 1 m^2

Only the spectrum of sound power and the LwA value are contractually binding. For a distance other than 10 m, refer to the correction factors below. For precise calculation of the sound pressure on site, take into consideration the sound power of each fan and its position as well as environmental conditions (directivity, reflection,...).be taken into account (directivity, reflections, ...).

A+ class
Energy ratio (**R**): **R ≥ 226**
Energy consumption: **extremely low**

A class
Energy ratio (**R**): **169 ≤ R < 226**
Energy consumption: **very low**

B class
Energy ratio (**R**): **109 ≤ R < 169**
Energy consumption: **low**

C class
Energy ratio **R**: **69 ≤ R < 109**
Energy consumption: **medium**

D class
Energy ratio (**R**): **37 ≤ R < 69**
Energy consumption: **high**

E class
Energy ratio (**R**): **R < 37**
Energy consumption: **very high**

THE ENERGY EFFICIENCY CLASS IS DEFINED BY THE RATIO R

Nominal certified capacity of the condenser in kW divided by the total certified input power of the motors in kW in the conditions of the rating standard.

Description of the different protection options

	Different types of anti-corrosion treatments				Other anti-corrosion protection option
	BAE 1 Epoxy paint treatment	**BAE 2** Lacquered aluminium protection	**BXT** Blygold treatment	**BHE** Heresite treatment	**BIN** 304L stainless steel protection
Definition	**Epoxy** treatment *on the fins + end plates*	**Lacquered aluminium** foil, *only on the fins*	**Blygold** treatment *on the whole coil*	**Heresite** treatment *on the whole coil and on all the elements fitted before treatment*	**304L stainless steel** *Stainless steel or aluminium fins Stainless steel tubes Stainless steel guard plates*
Description	Very good flexibility, allows the coils to withstand thermal shocks without damage. Treatment thickness: 60-80µm.	Very good finish, high thermal conductivity, good drawing and low density.	Treatment thickness: 25-30µm. Composed of polyurethane, which allows the coil to have good thermal conductivity. No anti-bacterial treatment.	Low flexibility. High sensitivity to shocks. Treatment thickness: 75µm.	-
Method of application	**STAGES:** **1.** Cleaning and degreasing the coil **2. Spraying powder paint by hand using a spray gun and by robot** **3.** Oven drying at 190°C **4.** Visual inspection	Ready to use rolls of **lacquered aluminium**	**STAGES:** **1.** Cleaning and degreasing the coil **2. An operator sprays 4 criss-cross layers of polyurethane by hand** **3.** Drying at 20°C in the open air if the coil is > 80cm or in the oven at 80°C if the coil is between 50 and 80 cm **4.** Visual and endoscopic inspection	**STAGES:** **1.** Cleaning and degreasing **2. Several layers of resin applied by soaking** **3.** Oven drying at approx. 120-142°C **4.** Finished using a spray gun and dried in the oven at 180°C. **5.** Visual inspection	Ready-to-use rolls of **304L stainless steel**
Resistance to neutral salt spray *(tests carried out in accordance with the ASTM B117 and NF EN ISO 92/27 standards)*	**1500 hours**	**1000 hours**	**2500 hours**	**3500 hours**	-
Estimation of corrosivity category of environments. *(ISO 12944, see below)*	**C4**	**C3**	**C5 - I** **C5 - M**	**C5 - I** **C5 - M**	**C5 - I**
Durability class *(limit, medium, high)*	High	High	High	High	High
Colour	White	Gold	Champagne	Brown	Silver
Operating temperature range	Higher than +180°C	Higher than +180°C to -16°C	+180°C to - 80°C.	+180°C to -75°C	Higher than +180°C
Photos					

ISO 12944 standard - Classification of environments

The **ISO 12944 standard** is a guide for choosing paint for steel structures that will ensure a certain level of durability in a given atmospheric environment.
The atmospheres are classified into 6 categories from C1 to C5-M.
In-situ or artificial laboratory tests make it possible to choose the most suitable coating.
This standard does not therefore apply directly to our products. However, we have used the classification of the different atmospheric environments and our neutral salt spray test results in order to provide you with an estimated classification for them.
The notion of durability does not constitute a warranty period.
It is an indication established according to the results obtained in salt spray tests.
A maintenance plan must be established to keep the heat exchangers in their original condition.
Not leaving deposits on their surfaces will in many cases avoid corrosive attack.

MA

- Protected coil fully painted as standard.
- 3 types de motoventilateurs: 4, 6 and 8 pole for optimum noise attenuation.
- 2 blowing directions with horizontal or vertical installation with legs (optional).
- Modular product comprising 9 models: 3 types of coils and 3 types of fans.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MA - Axial fan condenser

R404A | DT1 = 15K

DESCRIPTION

Casing

• Galvanized steel casing totally protected with polyester painting.

Ventilation

• 2 mono-fan models and 1 twin-fan model, Ø 350 mm.
• 04, 06 and 08P models for even better noise level attenuation.
• Fan(s) delivered unfitted, packing gland at bottom.

CERTIFICATIONS

OPTIONS

PIE Legs for MA installation with vertical air flow.

ADVANTAGES

Installation

Legs (optional) for floor-mounted installation with vertical air flow.

Highly modular coil + separate motor concept:
rapid connection during fan assembly, gland located at the bottom.

Servicing / Maintenance

Fans of the "plug" type for easy maintenance.

WA

- Painted casing and corrosion-resistant, stainless steel screws.
- Very low noise 12 and 16 pole models.
- 2-speed, axial fans.
- 2 blowing directions: horizontal or vertical installation as standard.
- Modular product comprising 34 models: 13 types of coils and 4 types of fans.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

WA - Axial fan condenser

DESCRIPTION

Casing

- Made of galvanized sheet steel, the condensers of the WA range are extremely well protected against corrosion thanks to the UV-resistant, polyester paint coating, as well as the use of white pre-painted, galvanized sheet steel.
- Components (fans, heat-exchanger coil) are fitted with stainless steel screws offering excellent corrosion resistance.

Ventilation

- The condensers of the WA range are equipped with axial fans:

  Ø 500 mm, 2 speeds:
  04/06P = 1,500/1,000 rpm.
  08/12P = 750/500 rpm.

  Ø 630 mm, 2 speeds:
  04/06P = 1,500/1,000 rpm.
  06/08P = 1,000/750 rpm.
  08/12P = 750/500 rpm.
  16P = 375 rpm.
  400 V, 3-phase, 50 Hz (50-60 Hz for 08/12P and 12/16P motors), monoblock, external rotor, with incorporated thermal overload protection, IP 54, class F.
- The high-efficiency, profiled fan blades turn at a very low noise level.
- The protection guards are compliant with safety standards.
- 2-speed motor connection: Δ = high speed, Y = low speed.

Coil

- The condensers of the WA range are equipped with a compact, high-efficiency, finned coil composed of staggered, grooved tubes placed in the air flow and with profiled aluminium fins, spacing 2.12 mm, optimizing the heat exchange coefficient.

CERTIFICATIONS

(1) Sound pressure level in dB(A), obtained in compliance with standard NF EN 13487 (parallelepiped reference surface).
(2) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only.
Values measured under nominal operating conditions with clean coils and rated voltage.
(3) Setting of overload protection levels.
(4) ODF = Female to receive a tube of the same diameter.

AXIAL FAN CONDENSER

COMMERCIAL AND INDUSTRIAL RANGE

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres
Food processing - Canteen kitchens

HFC

18 > **1240** kW

NEOSTAR

NEOSTAR POWER The choice of **performance** and **low space requirement**.

- Capacity of up to 1,250 kW!
- Compactness: optimized heat exchange for reduced size.

NEOSTAR SILENCE The choice of **efficiency** and **low noise**.

- Low rotation speed motors with optimized electrical power consumption.
- Perfect incorporation in an urban environment, extremely quiet motors.
- An electronic switching motor (EC) is proposed as an optional extra for all models in this range.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

This NEOSTAR range is sub-divided into two product lines to better meet the needs expressed in the various application fields:

neostar POWER

MASTER THE POWER

The “Power” range offers even more power in a space-saving unit.
The power rating of this unit may be as high as 1,250 kW!

An electronic switching motor (EC) is proposed as an optional extra for all our models to help reduce the energy footprint of the user's installations. Indeed, use of this type of motor offers a very significant reduction in energy consumption for a given power rating.

neostar SILENCE

LISTEN TO THE SILENCE

The "Silence" range is perfectly adapted to city centre commercial applications and all other applications where quiet operation is a key factor. In compliance with Eurovent standards the sound pressure level at 10 metres is as low as 19 dB(A) per module!

DESCRIPTION

Casing

- The casing is made of galvanized, as well as white pre-painted, galvanized sheet steel.
- The use of stainless steel screws guarantees excellent, long-lasting corrosion resistance (standard ISO 7253) and aesthetic quality.
- All components used have successfully passed the salt mist corrosion and Kesternich tests.
- The units are delivered screwed to a wooden base.
- Wooden crate packaging available as optional extra.

Ventilation

- The NEOSTAR air condenser range is equipped as standard with 2-speed, external rotor fans (star or delta connections).

NEOSTAR POWER

- The NEOSTAR Power range is equipped with the following motor fan units:
  - Ø 800 mm (PN) : 06P (D/Y) = 885/685 rpm.
  - Ø 910 mm (PU) : 06P (D/Y) = 880/670 rpm,

NEOSTAR SILENCE

- The NEOSTAR Silence range is equipped with the following fan units:
  - Ø 800 mm : 08P (D/Y) = 680/540 rpm,
  - Ø 800 mm : 12P (D/Y) = 440/330 rpm (special fan)
  - Ø 800 mm : 16P (Y) = 255 rpm.
- These enclosed motors are of the type 400V/3/50Hz, IP54, class F, compliant with standard EN 60529, permanently lubricated. Please contact us when the temperature exceeds 60°C.
- The motor fan units are wired as standard and factory connected as follows:
- 1 to 3 switching boxes for the models L (motors connected in line),
- 2 to 8 switching boxes for the models P (motors connected in parallel).
- We are also able to deliver the units unwired upon request (SCU option).
- Fan guards are compliant with safety standards.
- Fans units with special voltage ratings:
- M60: Fans 400 V/3/60Hz, IP54, class F, in version 06P Ø 910 mm
- M26: Fans 230 V/3/60Hz, IP54, class F, in version 06P Ø 910 mm

EC motor

- Electronic switching fan motors (EC) are also proposed as an optional extra and enable optimized operation of your installation. **This motor offers a reduction in energy consumption for a given power rating: a detailed comparison of the energy balance may be carried out for each project.**

Coil

- The air condensers of the NEOSTAR range are equipped with a high-performance, finned coil designed with profiled aluminium fins crimped onto internally grooved copper tubes.
- For this latest generation of condensers, a new optimized fin has been specially designed to improve performance, efficiency and compactness of the units.
- Special coil coatings are available (Vinyl protection (**BAE**), Blygold Polual XT protection (**BXT**)) offering greater corrosion resistance when used in aggressive atmospheres.

Selection software

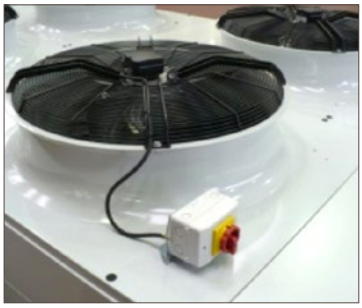
- A wider selection of models is given in our software package to better meet your needs and expectations.

DESIGNATION

PN(1) **06**(2)**D**(3) **P**(4)**08**(5) **A2**(6)

(1) **PN** (Power Normal) - **PU** (Power Ultra)
SN (Silence Normal) - **SE** (Silence Extra) - **SU** (Silence Ultra)
(2) Number of poles
(3) **D** = Delta connection - **Y** = Star connection
(4) Fan arrangement: **L** = fans in line - **P** = fans in parallel
(5) Number of fans
(6) Type of module

CERTIFICATIONS



ADVANTAGES

Installation

Installation horizontal or vertical position as required: in case of installation with horizontal air flow, the predominant wind direction must be taken into consideration to avoid any risk of hot air recirculation.

Motors supplied factory wired and connected to reduce installation time.

Support legs extended up to 1,840 mm (optional) to meet installation requirements.

Servicing / Maintenance

Unimpeded access to the coil rendering maintenance easier.

OPTIONS

Kit	Factory	
		Ventilation
	M60	Fans 400 V/3/60Hz (please contact us for details).
	M26	Fans 230 V/3/60Hz (please contact us for details).
	MTH	Motors equipped with a protection thermostat. Recommended with frequent start sequences (more than 30 start sequences per hour) or when a speed controller is used.
	IRP	Rotary proximity switch(es).
	C2V	2-speed factory wired in the switching box.
	SCU	Without factory wiring. To be indicated when ordering if the condenser unit is to be delivered unwired.
		Coil
	MCI	Multi-circuits.
	BAE	Vinyl protection of fins.
	BXT	Blygold Polual XT protection of coils.
		Casing
	RAL	Special colours.
	REH	Legs extended by 240 mm (ground clearance 800 mm)
RE2		Legs extended by 840 mm (ground clearance 1400 mm)
RE3		Legs extended by 1340 mm (ground clearance 1900 mm)
RE4		Legs extended by 1840 mm (ground clearance 2400 mm)
	ECB	Wooden crate packaging.
		Protection and control enclosure
	MEC	Condensation pressure control with speed variation using an electronic switching motor (EC).
	CMP	Motor protection cabinet.
	RP1	CMP + condensation pressure control with cascade stoppage of fans.
	RP2	CMP + condensation pressure control with speed variation (voltage).
	RP3	CMP + condensation pressure control with speed variation (frequency).
MSK		Floor mounting kit.

Other options
Please contact us for details.

(1) Capacities are expressed in kW for R404A with DT1 = 15 K. They are equal to the capacities measured in accordance with standard CEN EN 327.
"DT1" represents the difference between the ambient air temperature and the condensation temperature considered equal at an equivalent condenser inlet pressure.
(2) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only. Values measured under nominal operating conditions with clean coils and rated voltage.
(3) Power required for all motors.
(4) Setting of overload protection levels.

(1) Capacities are expressed in kW for R404A with DT1 = 15 K. They are equal to the capacities measured in accordance with standard CEN EN 327.
"DT1" represents the difference between the ambient air temperature and the condensation temperature considered equal at an equivalent condenser inlet pressure.

(2) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only. Values measured under nominal operating conditions with clean coils and rated voltage.
(3) Power required for all motors.
(4) Setting of overload protection levels.

(1) Capacities are expressed in kW for R404A with DT1 = 15 K. They are equal to the capacities measured in accordance with standard CEN EN 327.
"DT1" represents the difference between the ambient air temperature and the condensation temperature considered equal at an equivalent condenser inlet pressure.

(2) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only. Values measured under nominal operating conditions with clean coils and rated voltage.
(3) Power required for all motors.
(4) Setting of overload protection levels.

(1) Capacities are expressed in kW for R404A with DT1 = 15 K. They are equal to the capacities measured in accordance with standard CEN EN 327.
"DT1" represents the difference between the ambient air temperature and the condensation temperature considered equal at an equivalent condenser inlet pressure.

(2) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only. Values measured under nominal operating conditions with clean coils and rated voltage.
(3) Power required for all motors.
(4) Setting of overload protection levels.

MXW

MICROCHANNEL COIL TECHNOLOGY

- A range designed to minimize unit footprint.
- High power density for an optimized energy consumption.
- Micro channel technology allowing a significant reduction of refrigerant charge.
- State of the art design with hidden fans for a perfect architectural integration.

FRIGA-BOHN

HK® REFRIGERATION

MXW - Condenser with microchannel coil technology

DESCRIPTION

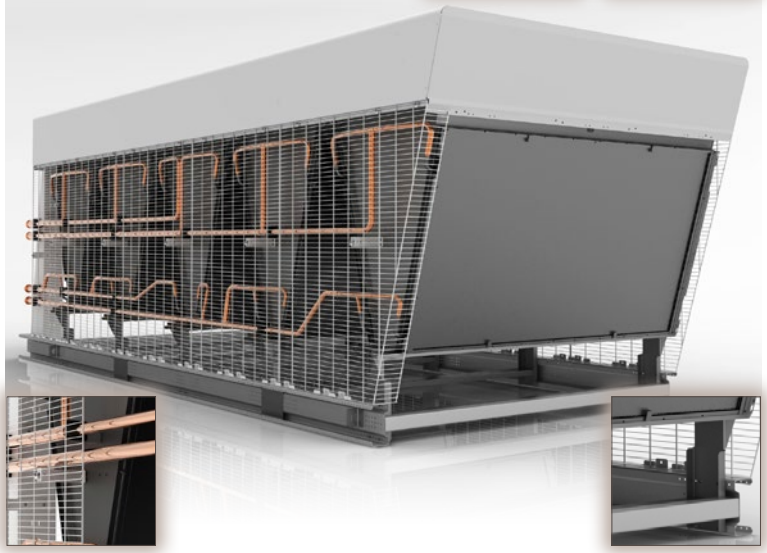
Casing
- Casing made of galvanised steel sheet metal painted with a white powdered polyester paint.
- Lateral anti-intrusive grilles painted with aesthetic design offering a protection against external impacts. (Option)
- Unit with attractive design and low height (< 2m) for a perfect integration into the surrounding environment.

Coil
- The MXW range is equipped with aluminum micro channel heat exchanger offering reliability and robustness (high mechanical fin resistance) and high corrosion resistance.
- This technology has proven its value in the automobile sector and is now used for its numerous advantages in the refrigeration sector and air conditionning sectors.
- These coils offer greater efficiency than traditional coils (copper tubes/aluminum fins). They are significantly lighter and the reduced weight renders them easier to handle. As the coil is brazed in a single operation, the risk of leakage is considerably reduced and the quality inspections are stringent: 100% of the products are tested.
- Special coating for the coils are available to ensure an improved corrosion resistance for aggressive atmospheres.

Micro channel technology

Aluminium micro channel heat exchanger with enhanced alloy system

Copper/aluminium connection with strengthened system



Protection guard
Aesthetic design and easily removable grilles offering protection against external impact

Smart construction
Elevated coils to fill properly the liquid receiver in case of installation on the floor

Ventilation
- The MXW range is equipped with high reliability external rotor fans.
- Fan guards are compliant with safety standard.

EC motors
- High reliability electronic switching fan motors (EC) enable optimized operation of your installation.
  - Ø 800 mm: EC1 (EC oversized motor) = up to 1020 rpm.
  - Ø 800 mm: EC2 = up to 730 rpm.
- This motor offers a reduction in energy consumption for a given power rating: a detailed comparison of the energy balance may be carried out for each project. (please consult us).
- The motor fan units are wired as standard and factory connected.

AC motors (option)
- Ø 800 mm : 06P (D/Y) heavy-duty motor = 910/730 rpm.
- Ø 800 mm : 06P (D/Y) = 885/685 rpm.
- Ø 800 mm : 08P (D/Y) = 660/485 rpm.
- Ø 800 mm : 12P (D/Y) = 435/340 rpm.
- Ø 800 mm : 16P (Y) = 255 rpm.
- These enclosed motors are 400V/3/50Hz, IP54, with 2-speed (star or delta connections), class F, compliant with standard EN 60529, permanently lubricated.
  Please contact us when the temperature exceeds 60°C.`

ADVANTAGES

Installation

Optimisation of installation costs:
The modular construction allows each module to be connected independently offering autonomous regulation of discharges of several compressorised racks. The user may use one single condenser that reduces the space requirement and installation time. In addition, the reduced charge refrigerant ensures a reduced costs.

Minimized Footprint:
The MXW ranged is optimized to minimize floor space required for installation by the combination of original design and innovative technology: The condenser is indeed built as modules around W-shaped micro-channels coils for easy installation in confined spaces.

Ideal for use is an urban environment:
Various ventilation solutions offered allowing significantly reduce noise level as low as 19 dB(A) at 10m per module. In addition, **SilenTop** hides fans and acts as acoustic enclosure.

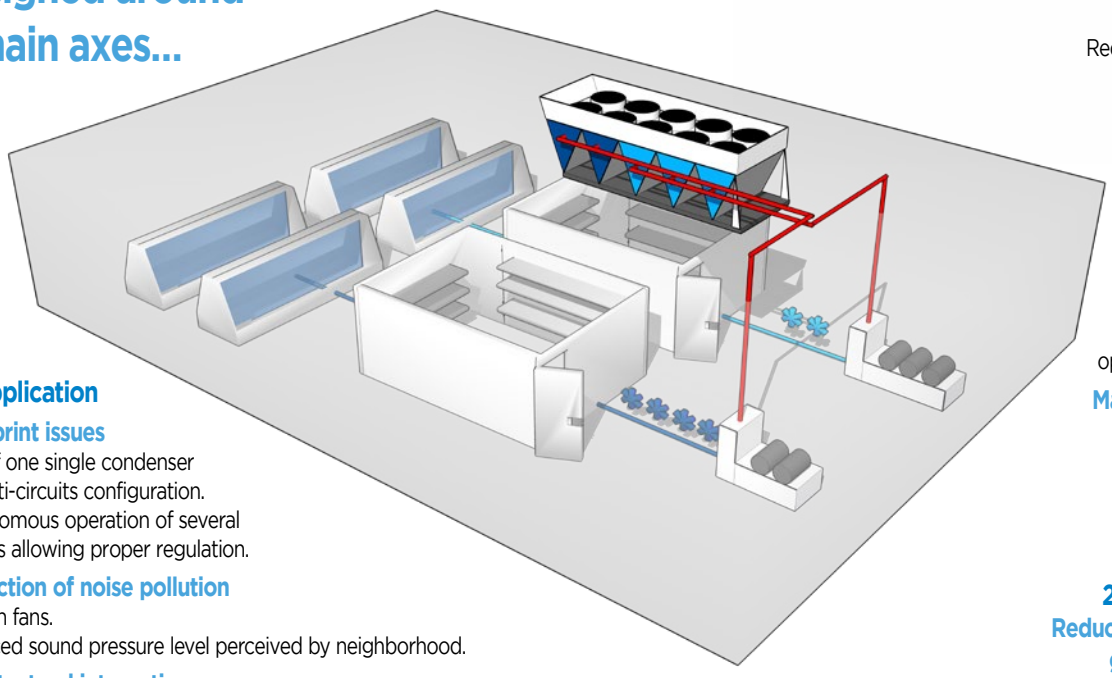
Servicing

Use of high pressure cleaners for easy coil servicing.

Maintenance

Easy access to the coil rendering maintenance easier.
The modules are composed of two coils easily removable for easy maintenance.

An innovative conception designed around 3 main axes...



1. Total cost of ownership

Installation costs reduced
Reduced total refrigerant charge up to -30%.
Reduced structural frame needs.

Installation time reduced
Factory pre-mounted components (options).
One single craning required (multi-circuits configuration).

Energy consumption reduced
High power density.
Reduced air pressure drop optimizing energy comsuption.

Maintenance costs reduced:
Easy access to the coil.
Unitarily replaceable coils.

2. Environmental impact

Reduction of direct and indirect greenhouse gas emissions

Actual and forthcoming legislative constraints
Tax on the refrigerant amount of refrigeration systems (depending on the country).
European directive F-Gas.

3. Application

Footprint issues
Use of one single condenser in multi-circuits configuration.
Autonomous operation of several circuits allowing proper regulation.

Reduction of noise pollution
Hidden fans.
Reduced sound pressure level perceived by neighborhood.

Architectural integration
Sleek design for a proper architectural integration.
Very low height (<2m).

Easy handling
Reduced unit weight up to -30%.

** Sound pressure level in dB(A) measured at 10 m, at fan height, in direct line of sight on a reflective surface.*

(1) Capacities are expressed in kW for R404A with DT1 = 15 K. They are equal to the capacities measured in accordance with standard CEN EN 327.
"DT1" represents the difference between the ambient air temperature and the condensation temperature considered equal at an equivalent condenser inlet pressure.
(2) Sound pressure level in dB(A), obtained in compliance with standard NF EN 13487 (parallelepiped reference surface).
(3) Sound pressure level in dB(A) measured at 10 m, line of sight, on a reflective parallelepiped measurement surface, given for information only.
Values measured under nominal operating conditions with clean coils and rated voltage.

Corner shops - Mini-markets
Hard Discount - Supermarkets - Hypermarkets

HFC

11 > **146** kW

CCT

- Centrifugal fans with available air pressure of up to 150 Pa.
- 2 blowing directions possible and 8 air inlet/outlet combinations.
- The unit may be removed (DEM option) for installation in difficult access zones.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

CCT - Centrifugal fan condenser

DESCRIPTION

Casing

- The casing is made of galvanized sheet steel.
- All components of the CCT range are designed for exposure to adverse weather conditions.

Ventilation

- Centrifugal fans: available pressure of up to 150 Pascals, performance adapted.
- Fans of the direct-drive, "double inlet" type with a rotation speed of 1,000 rpm.
- Enclosed motors with incorporated thermal overload protection, 230V/1/50Hz (230-400V/3/50Hz for CCT 1x12T B2 - 1x12T B5 - 2x12T B2 - 2x12T B5 - 3x12T B2 3x12T B5 - 4x12T B3 and 4x12T B5), IP 54, class F, permanently lubricated.
- Electrical connections factory-wired to an easily accessible switching box (three-phase motor: factory wired to 400V).
- In order to facilitate pressure control with fan stoppage, the turbines are separated with a baffler to avoid air by-pass.

Coil

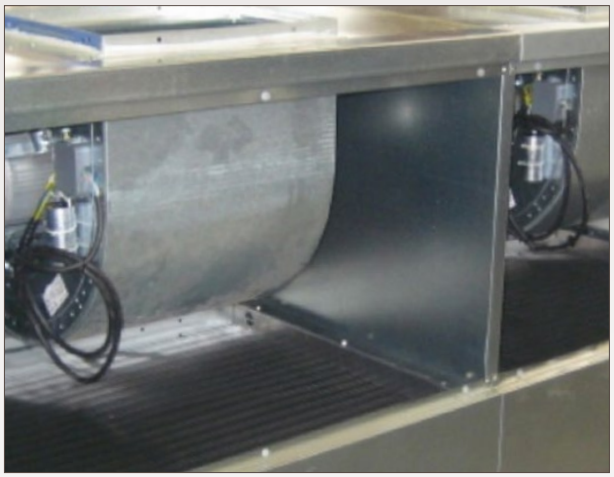
- The condensers of the CCT range are equipped with a high efficiency coil composed of profiled aluminium fins spaced at 2.12 mm, crimped onto staggered copper tubes 3/8" (9.53 mm) to optimize the heat transfer coefficient.
- Brazed connections.
- Pressure tapping point.

CERTIFICATIONS

DESIGNATION

CCT 1(1) **x12T**(2) **B2**(3)

(1) Number of centrifugal fans
(2) **12T** = Three-phase - **10M** = Single-phase
(3) Type of module



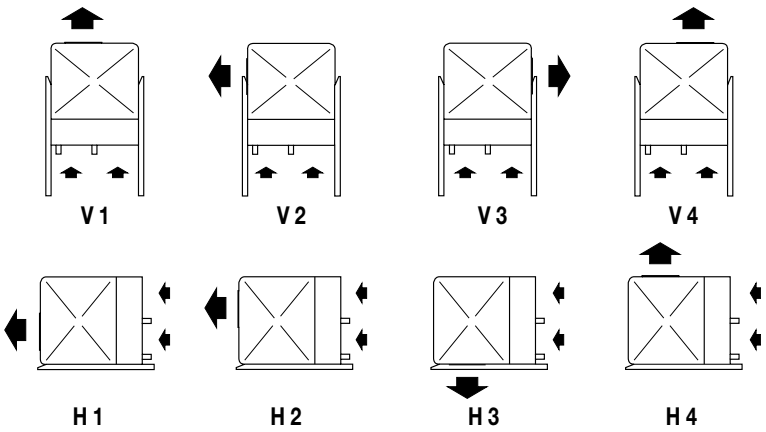
In order to facilitate pressure control with fan stoppage, the turbines are separated with a baffler to avoid air by-pass.

ADVANTAGES

Installation

For installations with difficult access, the condenser of the CCT range may be quickly removed and refitted on site.

Two installation positions, vertical air or horizontal air, with four blower outlet directions possible (to be specified when ordering):
V1, V2, V3, V4 or **H1, H2, H3, H4**



Possibility of modifying the air outlet position on site.

Servicing / Maintenance

Easy access to all components of the CCT range for commissioning, maintenance and cleaning.

HFC

60 > **290** kW

CCV

- Totally removable, the CCV is specifically designed for use in tight spaces and difficult access zones.
- Reduced height and footprint.
- EC motors as standard offering optimum control for a low energy consumption.
- Low noise.
- Available air pressure of up to 200 Pa.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

CCV - Centrifugal fan condenser

DESCRIPTION

Casing

- The casing is made of galvanized sheet steel.
- Hairpins and collectors are protected with removable sheet metal.
- Easy access to all components for commissioning, maintenance and cleaning.
- For installations with difficult access, the condenser may be quickly removed (coil, casing, fans) and refitted on site.
- Possibility to modify the air outlet position (V1, V2, V3, V4, V1+V4) using interchangeable panels (for combination V1+V4, a second set of "air outlet" panels is required, to be stipulated on the order form).

Ventilation

- Centrifugal fans: available pressure of up to 200 Pascals, performance adapted.
- Three-phase motor, Ø 630 mm, IP 54, 380-480V/3/50-60 Hz, 2.9kW, 4.6A, 1,200 rpm.
- The fans are equipped with an electronic switching (EC) device.
- Electrical connections factory-wired to an easily accessible junction box.
- Each turbine is separated with a baffler to avoid air "by-pass".

Coil

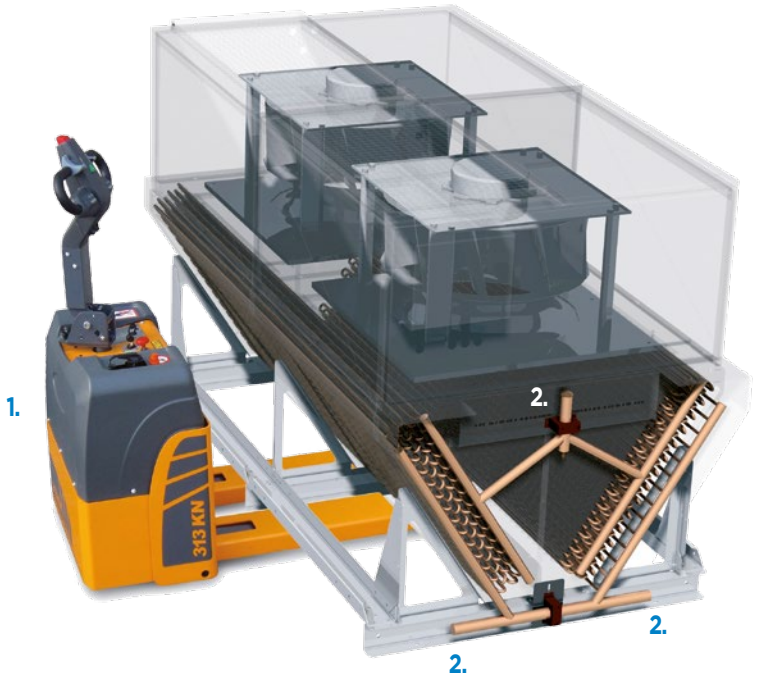
- The condensers of the CCV range are equipped with two high efficiency "V" configuration coils composed of profiled aluminium fins spaced at 2.12 mm, crimped onto staggered copper tubes 3/8" (9.53 mm) to optimize the heat transfer coefficient.
- Two coils, but only one inlet and one outlet.

Environmental respect

Motor with electronic switching (EC):

- Optimum control of condensation pressure,
- Energy saving,
- Low noise level.

CERTIFICATIONS



DESIGNATION

CCV 4(1) V2(2)

(1) Number of fans
(2) Air direction

ADVANTAGES

Installation

Easy handling: the frame structure allows easy passage of the pallet truck for transport (1).

The CCV may be removed in 3 parts to allow easy passage of standard doors of 80 cm in width.

Compact unit, 2 coils in "V" configuration to optimize the footprint in the machine room.

The condenser may be installed on a refrigeration rack to limit the footprint.

Rapid commissioning: One inlet/outlet collector for both coils requiring only one connection. Left or right as required (2).

Interchangeable sheet metal panels, 5 air outlet combinations.

Servicing / Maintenance

Easy maintenance and cleaning thanks to unimpeded access to components.

The coil becomes accessible for easy cleaning by simply removing the two panel elements.

FC / FI NEOSTAR

FC NEOSTAR "City"

- Compactness and high efficiency.

FI NEOSTAR "Industry"

- Low pressure drop and high capacity.
- Wide range up to 1,200 kW, optimized head loss.

Main applications:

- Air conditioning, free cooling, co-generation, power plants, process, industry ...
  and cooling all kinds of fluids compatible with copper, with a maximum inlet temperature of 100°C.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DESCRIPTION

Casing

- The casing is made of galvanized, as well as white pre-painted, galvanized sheet steel.
- The use of stainless steel screws guarantees excellent, long-lasting corrosion resistance (standard ISO 7253) and aesthetic quality.
- All models offer in standard (except A modules) to facilitate maintenance, a trapdoor between two fans for a direct access to the battery.
- All components used have successfully passed the salt mist corrosion and Kesternich tests.
- The units are delivered screwed to a wooden base.
- Full crate packaging in option.

Ventilation

- The FC/FI NEOSTAR range is equipped with motor fans:
- **Classe F** (standard): 2 speed external rotor fans units 400V/3/50Hz (star or delta coupling).
- **Class H**: 2 speed fans units 400V/3/50Hz (star or delta coupling).
- **EC**: electronic commutation motor fans to reduce energy consumption of your installation.
- The motor fan units are wired as standard and factory connected as follows:
- 1 to 3 electrical boxes for the models L (motors connected in series),
- 2 to 8 electrical boxes for the models P (motors connected in parallel).
- **We are also able to deliver the units unwired upon request (option SCU).**
- Fan guards are compliant with safety standards.
- Fans units with special voltage ratings (FC/FI NEOSTAR):
- **M60**: Fan motor 400V/3/60Hz, IP54, class F, in version 06P Ø 910 mm
- **M26**: Fan motor 230V/3/60Hz, IP54, class F, in version 06P Ø 910 mm

Coil

- The dry coolers are equipped with coils with the following characteristics :
- Special fins to reduce clogging and enables efficient maintenance to ensure a sustainable performance.
- Copper tubes in a staggered arrangement and corrugated aluminium fins for optimum heat transfer.
- Headers with air vents and drain plugs.
- Connections : steel pipe, flanges.
- In option:
- Vinyl protection (**BAE**) or Blygold Polual XT protection (**BXT**) offering greater corrosion resistance when used in aggressive atmospheres.
- Superposed circuits **HT / LT**.

Generalities

- The freezing point of the fluid must be at least 5K below the minimum winter ambient temperature of the site of installation.

Freezing risk

- A standard dry cooler cannot be fully drained simply by opening the drain fitting orifices.
- Always run the piping leak tests using the selected fluid.
- For an application with water (without anti-frost), and if the ambient temperature may drop below 0°C, the dry cooler must be suitably designed to allow complete draining of the unit (option **VID**).

Recommendations

- According to the professional regulations concerning :
- Vents and drains
- Surge tanks (**VEX** option)
- Flexible connexions
- Vibration protection
- Correct percentage of glycol
- Fan motor protection
- Connection on a closed loop water cooling circuit, thus eliminating any risk of corrosion due to oxygenation.
- When the water supply pipes are made of a non-ferrous metal, take all precautions necessary to avoid corrosion.

CERTIFICATIONS

(6) Fan arrangement :
L : fans in line - **P** : fans in parallel
(7) Number of fans
(8) Type of module

ADVANTAGES

Selection

As the performance of a dry cooler varies a lot with each working condition, it is not possible to present a selection method in this document.
Only the selection software, at your disposal on www.lennoxemea.com, will allow you to select the dry cooler which suits the best your needs.
In case of emergency, do not hesitate to consult us in specifying: capacity, maximum day/night noise level, type of fluid, ambient temperature, fluid inlet temperature, fluid outlet temperature (or flow), maximum allowed pressure drop, other external constraints.

Installation

Simple and cheap installation (steel pipes).

Servicing / Maintenance

Reduced maintenance due to direct driven fans.

Low maintenance costs.

Dry coolers advantages

Replace advantageously cooling towers :
- no air and water bacteria contamination
- no water consumption
- no steam production
- flexible use in winter time
- easy control of fluid temperature in winter time

An optimised solution (noise level, energy consumption, size, type of temperature control...) due to multiple selection possibilities.

FRIGA-BOHN

HK® REFRIGERATION

V-KING - V-shaped coil dry cooler

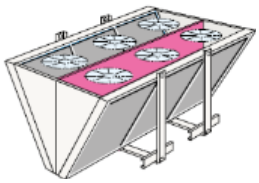
ACCESSORIES AND OPTIONS

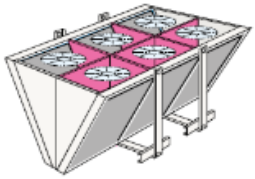
Adiabatic system

- Adiabatic system through indirect spraying on a polypropylene curtain in the opposite direction to the battery. Lowers the temperature of the air taken in by the battery without the risk of damage.

Horizontal or longitudinal separation

(or by fan, on request)





DESCRIPTION

Casing

- Self-supporting, highly rigid metal frame, with horizontal feed every 2 fans.
- Magnesium-zinc material 20 mm or 30/10 mm thick.
- Epoxy painted structure for maximum corrosion resistance, RAL 9003.

- Blowing direction:

Ventilation

- **Standard:** 400V/3/50Hz (class F) with external rotor, two-speed (delta-star connection).
- **Class H:** 400V/3/50Hz, two-speed (delta-star connection).
- **EC:** motor fan units with electronic switching to reduce your installation's energy consumption.
- Wiring path inside the product.

Coil

- Staggered copper tubes and embossed aluminum fins for optimal heat exchange.
- Pitch of 1.9 mm to 3 mm, depending on application and soiling constraints.
- Stacked HT/LT circuits possible.

Maintenance

- **Accessible fans:** 500 mm interior space on parallel models.
- Sustainable powers and easy cleaning thanks to non louvered fins.

Certifications

- **Eurovent** certification planned for summer 2017.

HK® REFRIGERATION

EC motor, control and protection cabinet

ELECTRONIC SWITCHING MOTOR (EC) NEOSTAR - FC / FI NEOSTAR

Description

- Motor fan unit with electronic switching.
- IP 55 cabinet.

This option is always proposed with the controller wired:
- motor power connections wired.
- 0 - 10V circuit wired (between motor and enclosure).
- The “motor fault” indicator wired to the electrical enclosure.

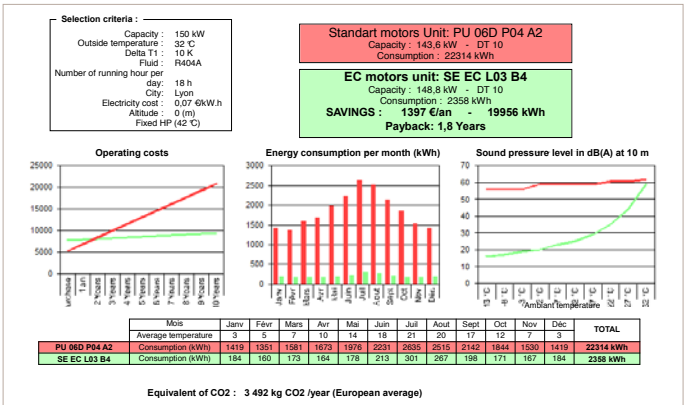
Additional options
In addition to the standard elements proposed above, other elements are also available:

MEC 1	Serial bus wiring of motors with addressing of the motor fan units.
MEC 2	Setting of max. speed parameter.
MEC 3	Setting of day/night operation parameters (clock and potentiometer).
	Back-up operation possible (please contact us for details).

Advantages

- Extremely low power consumption.
- Very low noise level.
- Control versatility.
- Reduction of operating costs.

Return on investment calculation tool:



Mois	Janv	Févr	Mars	Avr	Mai	Juin	Juil	Aout	Sept	Oct	Nov	Déc	TOTAL

Please contact us for comparative studies between the AC motor/EC motor:
quotation@lennoxemea.com

PROTECTION CABINET (CMP) AND RP/RT CONTROL

CMP enclosure

- IP54 cabinet.
- Fault protection: one normally open contact (NO) and one normally closed contact (NC).
- A main switch.
- One contactor per motor.
- Motor and supply packing glands.
- Wiring diagram.
- This enclosure is proposed as an optional extra fitted to the unit (floor support for those larger than H = 800 x L = 1,000) or supplied not fitted and packed separately. When delivered not fitted, the cable connecting the enclosure to the unit is provided by the installer.
- A support kit for floor mounting (**MSK**) is available as optional extra.
- In the **RP3 / RT3** version, it is recommendable to use the shielded cable connection.

Control by speed variation

RP3 / RT3 — With frequency speed controller

NEOSTAR	FC / FI NEOSTAR
• A frequency speed controller. • Protection of the speed controller with fuses. • Enclosure ventilation.	
• A pressure sensor with Schrader connector and shielded cable.	• A PT100 temperature sensor with finger sleeve.

Advantages
- Noise level.
- Optimized electrical power consumption.
- Control versatility.
- Simple programming adaptable to all types of processes.
- Fast installation.

Remarks:
If electrical power consumption is a key factor, give preference to the **MEC** option.
Contact us for a profitability study.

RP2 / RT2 — With voltage speed controller

NEOSTAR	FC / FI NEOSTAR
• A voltage speed controller. • Protection of the speed controller with fuses. • Enclosure ventilation.	
• A pressure sensor with Schrader connector and shielded cable.	• An NTC temperature sensor with finger sleeve.

Advantages
- Price

Remarks:
This enclosure cannot be ordered separately for later installation.
This control mode may generate noise at low rotation speeds.

If noise level is a key factor, give preference to the **RP3 / RT3** control system.

Control "On / Off"

RP1 / RT1 — In cascade

NEOSTAR	FC / FI NEOSTAR
• A pressure control switch.	• A thermostatic control switch.
• 1 or 2 pressure sensors with Schrader connector and shielded cable.	• 1 or 2 NTC temperature sensors with finger sleeve.

Advantages

1 to 4 control stages
- Capable of controlling two circuits.
- Setting of day/night operation parameter setting possible.

4 to 10 control stages
- Capable of controlling two circuits.
- Setting of day/night operation parameter possible.
- Date stamper incorporated.
- Capable of controlling a HP float type regulator.

LENNOX

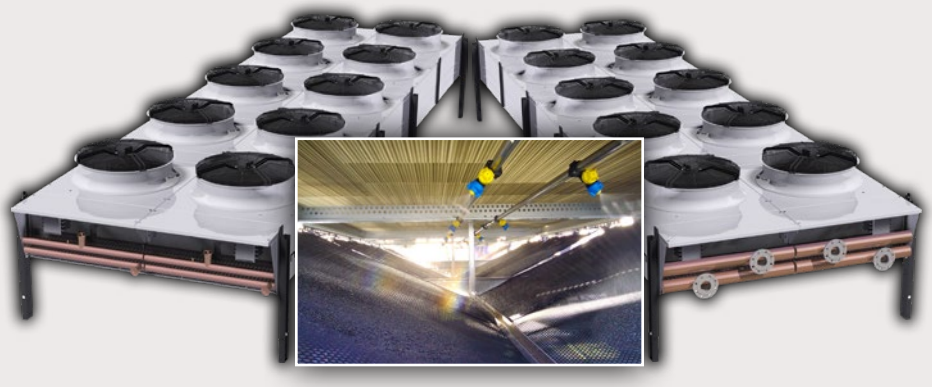
CONDENSER / DRY COOLER

INDUSTRIAL RANGE

ADVANCED ADIABATIC SYSTEM

- Adiabatic cooling system for air cooled condensers and dry-coolers
- Optimised water consumption
- Efficient selection software



www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DESCRIPTION

Operating principle

• The operating principle consists in spraying water in the opposite direction to the coil with an aim to reducing the temperature of the air sprayed.
The polypropylene curtain is used to maintain the water in the form of droplets.
• The system functions according to the lost water (no recycling) principle via the town water network.
• Generally, the pressure available in public networks in Europe (3 bar) is sufficient to spray without the need for treatment or a circulation pump.
• This unique system prevents water stagnation and eliminates all potential health hazards. Moreover, our system protects the coil from premature soiling.

Control

• Complete control cabinet IP55 supplied pre-fitted to the unit.
• Power supply 230V, 50/60Hz, ICC TN 50Ka.
• Regulator incorporated.
• 2 temperature sensors (S1: T° ambient and S2: T° condenser spraying).
• Water supply solenoid valve.

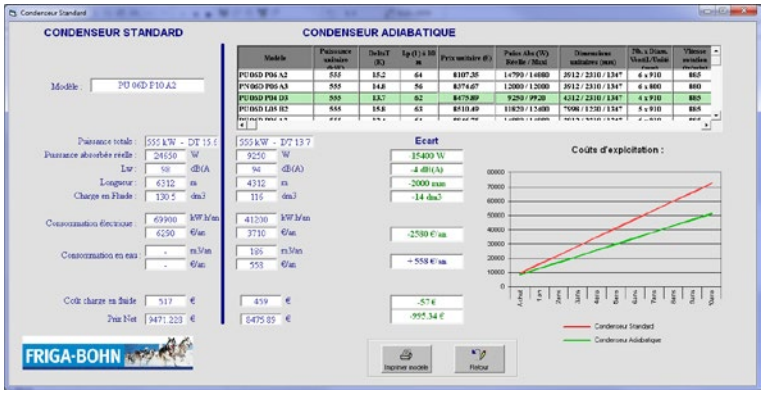
Spraying

• High-density polyethylene spray jets equipped with a high-resistance expansion membrane in case of ice formation in the water system.
• Stainless steel manifolds.
• Curtain guaranteeing homogenous spraying of cooled air over the entire spray surface thus improving system efficiency.
• Optional automatic drainage of the water circuit (supply of two NC, NO solenoid valves) and adapted regulator.

OPTIONS

• Installation and commissioning
• Automatic drainage

Case	Context / Advantages
Remodeling	• Increase in refrigeration needs. • Existing condenser units must be over-sized.
Retrofit	• Change of coolant in an existing installation. • Change-over from R22 (or R404A) to R407F/A resulting in an increase in condensation capacity.
Dimensional constraints	• Reduction of the unit footprint by 2.
Noise level constraints	• Reduction by up to 10 dB(A) of the acoustic pressure level.
Reduction of operating costs	• Reduction of electrical power consumption by around 40%. • Improvement of installation COP (decrease in condensation temperature).



ADVANTAGES

Indirect spray system

Water sprayed in the direction of the curtain guarantees a more homogenous temperature of the air sprayed than with the traditional systems whereby water is sprayed over a part of the coil only.

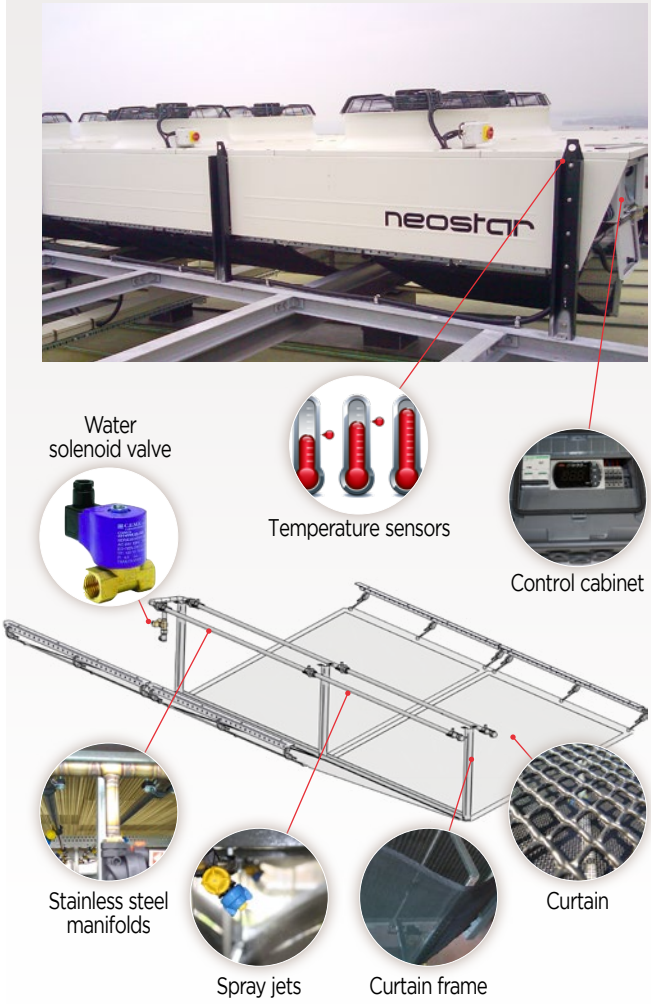
Avoids premature soiling of fins due to lime-scale deposit.
No treatment of coils necessary.
The curtain is anti-lime-scale and UV resistant.

Optimised water consumption

The water supply opening frequency is controlled by a temperature sensor placed on the coil inlet side. This offers a 70% to 90% reduction in water consumption compared to a traditional adiabatic system functioning in all-or-nothing mode.

Service

Installation and commissioning proposal.



EFFICIENT SELECTION TOOL

The high-performance selection tool contains a meteorological database enabling hourly estimation of condenser and dry-cooler operation 365 days a year in over 60 different geographic zones. In this way, the selection tool is used to calculate the exact running costs as well as the saving obtained thanks to use of the adiabatic cooling system in your installation.

Please contact us for a detailed case study.

EUROMON

- Complete "turnkey" monoblock unit designed for use in small cold rooms from 4 to 54 m^3.
- Mounted across the cold room panel; extremely compact unit cooler for optimum use of space in the cold room.
- Fast, easy and safe installation.
- Products assembled, tested and factory-preset according to the application.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

EUROMON - Refrigeration monoblock unit

DESCRIPTION

The genuine technical advantages offered by EUROMON monoblock generation earn it a place as leader in its market.

Fast installation

- The installation method for this unit is extremely simple. Simply slot the monoblock unit into the notches in the top panel of the cold room and secure it. Once in place, the unit is ready for use as soon as it is plugged into an electrical power point.
- Furthermore, the various control parameters are all factory-preset according to the application.

Total accessibility

- The front cover is designed in two parts rendering access to condensing unit components, in particular the compressor, condenser fans and re-evaporation heater, easier.
- The controller is equipped with a plug-in terminal rail for easy maintenance.

Energy saving

- The unit cooler electric defrost mode is approximately three times more economical than the hot gas defrost in terms of power consumption.
- Furthermore, it is independent of compressor operation which extends the operating life of this element.

Evaporation of condensation

- An electric immersion heater is used for this function which, contrary to the discharge gas solution, does not require the compressor and protects the piping against corrosion.
- Power consumption is minimized thanks to the self-adapting property of the heater.

Optimum use of room space

- The "ceiling unit" design form of the unit cooler not only guarantees better air distribution, but also provides more storage space for products in the cold room.

FRIGA-BOHN

HK® REFRIGERATION

CLIMACAVE - Split system for wine cellars

DESCRIPTION

Condensing unit

Casing

- Frame and casing made of pre-painted, sheet metal for outdoor floor or wall-mounted installation.

Condenser

- Copper/aluminium condenser coil with fan 230V/1 or 400V/3 - 1,500 rpm.

Switching cabinet

- Sealed IP 53 switching cabinet comprising: 1 switchboard to standard CEI 439-1 and APAVE approved, passage of electrical connections via packing glands, enclosure pre-wired with unit and unit cooler protection devices.

Other equipment

- Liquid line with dryer with accumulator and hygroscopic indicator.
- Operating valve with pressure tapping point (inlet/outlet on unit).
- Pre-filled with R404A.

Unit cooler

- Thick, recyclable ABS casing.
- Copper/aluminium coil, fins spaced at 4.23 mm and grooved tubes.
- Pre-fitted wide range expansion valve.
- Pre-filled with nitrogen.
- Wine cellar application with conservation at +12°C and controlled hygrometry.

Control

- Electronic control.
- Lighting control.
- Display and signalling of alarms.
- An additional programmable contact (door opening, trapped person safety...).

OPTIONS

Miscellaneous

KHE Magnetic port-hole lighting kit with door switch (not fitted).

CERTIFICATIONS

PED 97/23/CE

ADVANTAGES

Installation / Servicing / Maintenance
Ready-to-install units (operating valve, dryer, indicators, casing...) with user-friendly design offering easy access to components.
Compact and sturdy equipment for easy handling and installation in confined spaces.
Switching enclosure factory pre-wired and tested.
Unit cooler made of ASB with hinge-mounted casing, access to all internal components (coil, fan...) rendering setting and cleaning work easier.

VANGUARD

VANGUARD range

- This encased air condensing unit comprises 18 models:
  - 13 to meet chill application requirements,
  - 5 to meet low temperature application requirements.
- Coil using micro-channel technology:
  - made entirely of anti-corrosion treated and recyclable aluminium,
  - largely dimensioned for use at high outdoor temperatures.
  - with less internal refrigerant (30%).

SPLIT VANGUARD range

- The “ready-to-install” Split System model is proposed with various unit cooler types according to application requirements:
  ceiling unit (MR and MH), dual-discharge (TA), and cubic (3C-A).
- It covers the refrigeration requirements of cold rooms up to 170 m^3.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

VANGUARD - Condensing unit

VANGUARD is a "turnkey" encased condensing unit designed for outdoor use.

It may be used alone to supply refrigerated displays or cabinets or as a SPLIT VANGUARD system (with a fully fitted unit cooler + optimised control) for cold rooms or food preparation areas.

Furthermore, this "turnkey" unit also combines reliability and sturdiness with accessibility and silence. Indeed, all standard models in the VANGUARD range have a very low noise level. The power range is achieved with a small number of models, equipped with all elements required for system operation. This renders selection of a model much easier.

Size TA

Size TB

CONDENSING UNIT

Casing

- The casing is made of sheet steel, pre-painted in white, designed for outdoor use offering a high resistance to adverse weather conditions. For the size TB, the front and rear panels of the compressor compartment are made of sheet steel, pre-painted in black.

Compressor

- Two compressor technologies:
- H: Hermetic piston up to 1 ½ HP chill and 1 ¼ HP low temperature.
- Sc: Scroll. From 2 HP chill and 2 ½ HP low temperature.
- In the case of TB models, the compressor compartment is noise insulated to reduce the unit noise level.

Condenser

- The main innovative aspect of the VANGUARD condensing units resides in the use of new condenser coil technology. This aluminium, micro-channel coil technology has proven its value in the automobile sector and is now used for its numerous advantages in the refrigeration sector.
- Furthermore, the coils are largely dimensioned in order to function correctly at high ambient temperatures (+43°C).
- These coils offer greater efficiency than traditional coils (copper tubes/aluminium fins). They are much lighter and the reduced rack weight renders them easier to handle (less risk of damage or injury when installing the unit).
- Furthermore, they are extremely reliable and sturdy (high impact resistance) over a long period of time and offer an excellent corrosion resistance. An additional protection is provided with a special coating on the coils.
- As the coil is brazed in a single operation, the risk of leakage is considerably reduced and the quality inspections are stringent: 100% of the products are tested with helium.
- The coil is 100 % recyclable (a single metal) and the internal refrigerant volume is considerably reduced.
- Each model in the range is equipped with a single fan controlled with a voltage speed controller to help reduce system running noise at night.
- The three references of these fans (Ø 300 mm, Ø 400 mm Ø 600 mm) are all class F and index IP55.

Switching cabinet

- The switching box is made of ABS with protection rating IP66 and contains all protection and control components of the rack:
- Protection of compressor against overloads and surge voltages.
- Protection of fan against surge voltages.
- Controller supply and cold station terminals.
- Isolator switch.
- A fault relay for three-phase models.

Other equipment

- Speed controller: All models are equipped with a speed controller to guarantee optimum control of the condensation pressure.
- Liquid receiver (2l., 3l., 5l.) with shut-off valve at the receiver outlet.
- Liquid line with valve, dryer filter and hygroscopic indicator.
- LP pressure regulator and HP safety pressure switch.
- Casing heater.

ADVANTAGES

Installation

Electrical components supplied complete and factory pre-wired for fast installation.

Reduced size, compact and sturdy for easy handling and installation in confined spaces.

Servicing / Maintenance

All sheet metal casing elements are easily removed and offer total access to all unit components.

Once the casing elements have been removed (side, front and rear panels for the size TB), the unit structure is self-supporting thus simplifying any work on the unit (refer to illustration at top of page).

SPLIT SYSTEM

The VANGUARD range is also proposed in a Split System model, with 6 standard pre-selected applications (4 at medium temperature and 2 at low temperature), each equipped with a unit cooler adapted to specific requirements (cubic, ceiling unit, dual-discharge...).

Unit coolers

- Dual-discharge, or cubic ceiling-mounted unit coolers (low nose) according to the applications, with factory-fitted expansion and solenoid valves.
- The maximum distance between the condensing unit and the unit cooler is 20 m.

For further details, refer to our commercial unit coolers documentation.

Application 1 **Room temp. +8°C** **DT1 = 10 K**	**MR**	-	**TA**	-
Application 2 **Room temp. +6°C** **DT1 = 6 K**	**MR**	**MH**	-	**3C-A**
Application 3 **Room temp. +2°C** **DT1 = 8 K**	**MR**	**MH**	-	**3C-A**
Application 4 **Room temp. 0°C** **DT1 = 8 K**	**MR** + defrost **E1U**	-	-	**3C-A** + defrost **E1U**
Application 5 **Room temp. -20°C** **DT1 = 7 K**	**MRE**	-	-	**3C-A**
Application 6 **Room temp. -25°C** **DT1 = 6 K**	**MRE**	-	-	**3C-A**

Control

- Electronic control.
- Defrost control (air or electrical).
- Lighting control.
- Display and signalling of alarms.
- An additional programmable contact (door opening, trapped person safety...).
- Forced operation incorporated for rapid cooling or deep-freezing.

MAXI / MAXIBOREAL

MAXI range

- This encased air condensing unit model:
  - three compressor technologies,
  - a low noise model,
  - an oversized condenser model for hot climates.

MAXIBOREAL range

- The Split System model is proposed with various unit cooler types according to application requirements:
  - dual-discharge (TA),
  - cubic (3C-A).
- It covers the refrigeration requirements of cold rooms up to 400 m3.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MAXIBOREAL is a split system specifically designed to provide maximum comfort: Access to all components, low noise level option, oversized coil for hot climates.

Perfect control of the manufacturing process and numerous factory inspections guarantee optimum operation.

The 5 pre-selected applications are the following:

- **Dual-discharge unit cooler = chambers at +8°C / DT 10 K.**
- **Cubic unit coolers = chambers at +6°C / DT 6 K, +2°C / DT 8 K, 0°C / DT 8 K and -20°C / DT 7 K.**

The fin spacing and defrost mode is different for each application.

Select for each model:

- **The compressor technology:**
  - **SH (semi-hermetic piston),**
  - **or Sc (Scroll).**
- **The condenser:**
  - **standard**
  - **or S (oversized) for high ambient temperatures up to +43 °C.**
- **The noise level:**
  - **standard**
  - **or LN (low noise).**

DESIGNATION

MAXI(1) **SH**(2) **P**(3) **66**(4) **A**(5)

MAXIBOREAL(1) **SH**(2) **P**(3) **66**(4) **A**(5) / **T7R6P**(6)

(1) Condensing units / Split systems
(2) **SH** = Semi-hermetic compressor
Sc = Scroll compressor
(3) **P** = Chill range - **N** = Low temperature range
(4) Model
(5) **A** = Standard
AS = Oversized
ALN = Low noise level
(6) Unit cooler

CONDENSING UNIT

Casing

- This unit is specifically designed for outdoor installation with its pre-painted sheet metal protection casing.

Compressor

- A choice of semi-hermetic compressor or Scroll compressor. The following are supplied in all cases: suction and delivery valves, casing heater and oil level indicator.

Condenser

- 1 to 4 fans according to the models with various rotation speeds depending on the option retained.

Switching cabinet

- The switching enclosure is totally incorporated into the casing and the main isolator switch is protected in a corner case to prevent damage during transport.

Other equipment

- The receiver is supplied with a delivery valve. The liquid line comprises as standard a dryer filter, a hygroscopic indicator and an operating valve.
- LP control is provided with an adjustable pressure switch.
- HP safety is provided with an automatic-reset cartridge pressure switched.

ADVANTAGES

Installation

Particularly suitable in case of noise restrictions, the ALN model may be installed in an urban environment.

The oversized condenser of the AS model enables installation in zones with high ambient temperatures.

Electrical components supplied complete and factory pre-wired for fast installation.

Servicing / Maintenance

All sheet metal casing elements (side panels, flaps) are easily removed and offer total access to all unit components.

SPLIT SYSTEM

- The unit is pre-filled with refrigerant R404A.

Unit coolers

- Dual-discharge, low noise or cubic unit cooler according to the applications, with factory-fitted expansion and solenoid valves. **For further details, refer to our commercial unit coolers documentation.**

Control

- Electronic control.
- Defrost control (air or electric).
- Lighting control.
- Display and signalling of alarms.
- An additional programmable contact (door opening, trapped person safety...).
- Forced operation incorporated for rapid cooling or deep-freezing.

DUO CU MT / LT

- **Compact** and **low-noise**
- **Micro-channel technology:** 75% reduction in refrigerant volume
- **Two Scroll compressors**, one of which **Digital™**
- Available in fan versions **with** or **without available pressure** (indoor installation)
- **Multi-fluid:** R404A, R134a, R407F, R407A, R448A, R449A, R450A and R513A
- **Energy saving:** floating HP, heat recovery for MT models
- **Safety and reliability:**
  - Anti-corrosion treatment (according to the models)
  - Back-up operation with pressure control switch.
  - Electrical oil monitoring system.
- **Ready to install:** supplied with refrigeration and electrical systems complete
- **Easy maintenance:** total accessibility to components.

HK® REFRIGERATION

DUO CU MT / LT - Encased outdoor condensing unit

The DUO CU encased condensing units are comprised of 25 models and declined in fans with or without available pressure for medium temperature (MT) and low temperature (LT) applications.

DUO CU are compatible with the use of R404A, R134a, R407F, R407A, R448A, R449A, R450A, R513A for DUO CU MT and R404A, R407F, R448A, R449A for DUO CU LT

These units contain two Scroll compressors, one of which Digital™ providing modulation of the capacity from 10 to 100% suitable for multi-station cooling applications.

DESCRIPTION

Frame / Casing
- Thick and robust frame.
- The casing is made of painted sheet steel and Epoxy treated.
- The front and side panels may be easily removed.

Compressor
- Two Scroll compressors, one of which Digital™ (except DUO CU LT 26) enabling modulation of capacity.
- Shut-off valve on the suction and delivery sides, casing heater and rigid suspension elements.
- The compressors are equipped with a noise-insulating jacket.

Collectors
- Copper suction and delivery pipes.
- Filter on the suction side.

Oil line
- HP oil separator comprising an oil tank with high and low level indicators.
- HP oil return line with filter.
- Electrical oil monitoring system per compressor.

Condenser
- Coil with micro-channel technology (T1A / T1C - T3A / T3C - T4A / T4C) and Epoxy treated (T1A / T1C).
- Aluminium finned coil and copper tubes (T2A / T2C).
- Two axial or centrifugal condenser fans with speed controller or EC motors according to models.
- **Heat recovery system (only on DUO CU MT):**
  - Tapping with stand-by valves upstream of the condenser
  - Optional heat recovery module for production of ECS at 55°C or heating (contact us).
  - Regulation incorporated.

Liquid receiver
- Vertical receiver with a capacity of 18 or 45 l. and safety valve.
- Two inlet/outlet shut-off valves.
- Liquid outlet equipped with a dryer filter, an indicator and a liquid outlet valve.

Control and safety
- Complete electrical enclosure included.
- Electronic control with PLC and back-up operation with pressure switch
- Socalled "floating" HP regulator with exterior sensor.
- Idc 15kA
- Main isolator switch.
- Switch-over to back- up operation:
  - Automatic with LPE/HPE support pressure switches
  - Manual with a switch on the electrical enclosure door.
- 2 condenser fan protection outputs
- 4 cooling station outputs 2x10A

Monitoring devices
- 1 general LP safety pressure switch.
- 1 LPE support pressure switch (switch-over to back-up mode).
- 1 LP regulator pressure switch per compressor.
- 1 automatic-reset HP pressure switch per compressor.
- 1 HPE support pressure switch (switch-over to back-up mode).
- 1 HP and BP sensor.

DESIGNATION

DUO CU(1) MT(2) 45(3) A(4)

(1) Condensing unit
(2) **MT** = Medium Temperature range
LT = Low Temperature range
(2) Model (compressor)
(3) **A** = fans without available pressure
C = fans with available pressure

CERTIFICATIONS

PED 97/23/CE

ADVANTAGES

Installation
Unit ready to install, all components are factory pre-fitted.
Back-up operation with integrated pressure control switch.
Electrical elements supplied complete allowing rapid installation.
Regulator factory pre-set for multi-fluid use.
Maintenance
Total accessibility to main components.

DUO CU .. A - Fans without available pressure

DUO CU .. C - Fans with available pressure

DUO CU .. A - Fans without available pressure

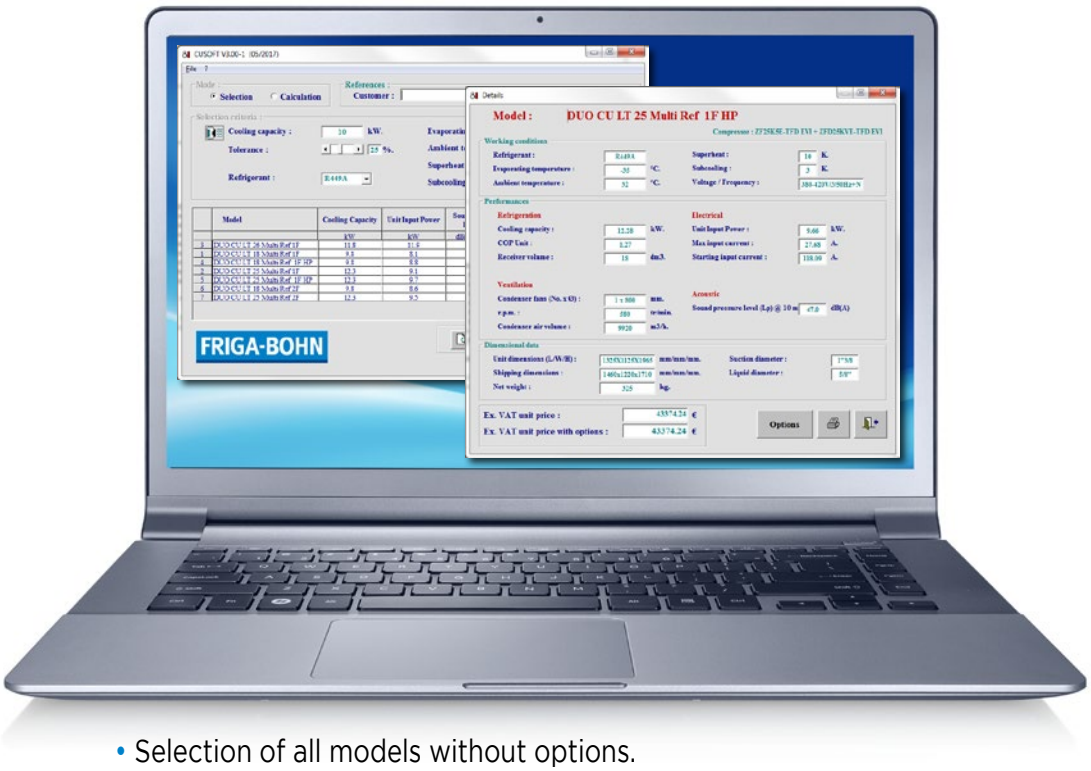
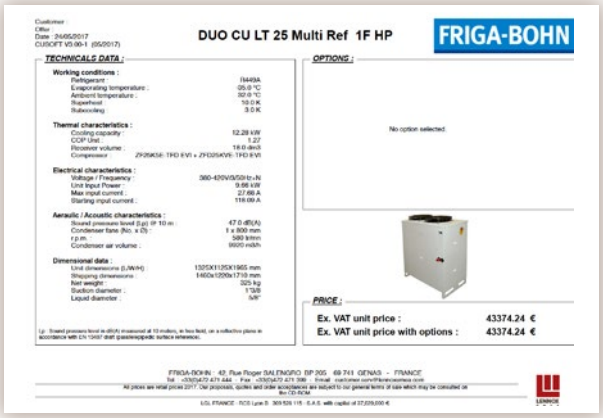
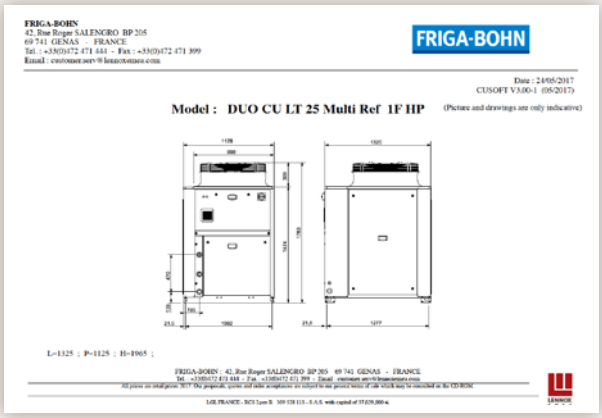
To help with all your choices and calculations, we propose our products software...



- Selection of all models without options.
- Thermodynamic calculations.
- Equipment dimensions on all sheets in digital format.
- Printing of data sheets for compilation of a price proposal.





Our software is available for:

commercial and industrial unit coolers, condensers, fluid coolers,
condensing units, split systems, compressor racks, encased outdoor units...

This software is updated several times a year and may be downloaded directly from our website:
www.lennoxemea.com/software/setup.exe

For further information, please do not hesitate to contact us:
42, rue Roger Salengro • BP 205 • 69741 Genas Cedex • France

ENCASED OUTDOOR CONDENSING UNIT

SINGLE-COMPRESSOR

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking
Food processing - Canteen kitchens

MEGA with CAR option

HFC

3.5 > **74** kW

MEGA

- Air condensing unit with:
  - equipment "tailored to needs",
  - casing (optional) for outdoor installation,
  - horizontal air blowing,
  - two compressor technologies,
  - a standard condenser,
  - or oversized for hot climates.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MEGA - Encased outdoor condensing unit

Composition of models
• Select for each model:
The compressor technology,
- SH (semi-hermetic piston)
- or Sc (Scroll).
The condenser:
- standard
- or S (oversized) for high ambient temperatures up to +43°C.

DESCRIPTION

Frame / Casing
• Rigid, thick sheet metal frame limiting transmission of vibrations.
• White pre-painted, sheet metal protection casing (**CAR** option).

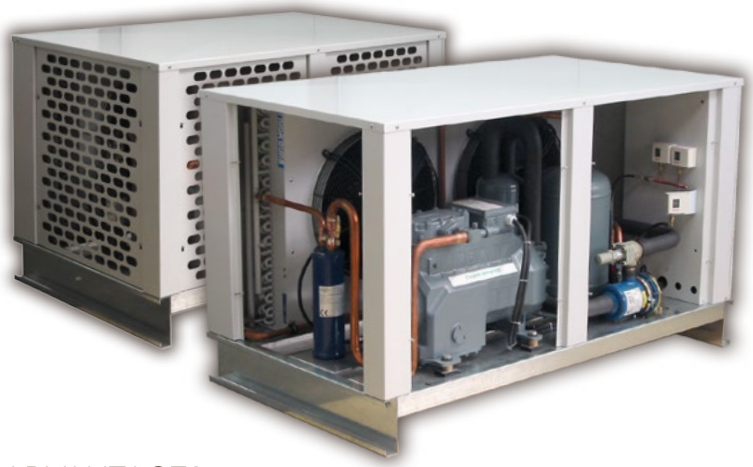
Compressor
• A choice of semi-hermetic compressor or Scroll compressor.
• The following are supplied in all cases: suction and delivery valves, casing heater and oil level indicator.

Condenser
• 1 to 4 fans according to the models.

Receiver
• The receiver is supplied with a delivery valve and safety valve (receiver ≥ 11 l.).

Control and safety
• The semi-hermetic compressor models are equipped with an oil differential pressure switch (except SH P100 - P170 - N85 - N105: oil presence sensor).
• LP control is provided with an adjustable pressure switch.
• HP safety is provided with 1 or 2 automatic-reset cartridge pressure switched. (compliant with standard EN 378-2:2009).

Wiring
• Wiring is provided to a junction box.



ADVANTAGES

Installation
Casing option (**CAR**) for installation of the unit outdoors.
Largely dimensioned liquid receiver: distance between the unit and the unit coolers up to 25 metres.
Oversized condenser for applications with high ambient temperatures.
Possibility of providing a wide range of factory-fitted optional extras to help reduce installation time on site.
Servicing / Maintenance
Easy maintenance and servicing thanks to unimpeded access to components.

DESIGNATION

MEGA SH(1) P(2) 85(3) AS(4)

(1) **SH** = Semi-hermetic compressor
Sc = Scroll compressor
(2) **P** = Chill range - **N** = Low temperature range
(3) Model
(5) **A** = Standard - **AS** = Oversized

CERTIFICATIONS

PED 97/23/CE

OPTIONS

Kit	Factory	
	CAC	Additional casing strap (**Scroll**).
	BAC	Suction accumulator.
	LIQ	Liquid line with dryer filter, hygroscopic indicator and operating valve.
	MAN	HP and LP manometers.
	RLS	Oversized receiver.
	RPC	Control of condensation pressure.
	SHU	Oil separator.
	VFA	Valve + suction filter.
	ARM	Switching enclosure with main isolator switch (compressor and condenser protection).
	CAR	Pre-painted galvanized sheet metal casing.
	EVL	Solenoid valve (not fitted).
	GPC	Condenser protection guard.
	ECC	Crate packaging (for the condensing units).

4 > **72** kW

MONOHAVANE

- Vertical-blowing encased air condensing units for outdoor installation on the floor or roof.
- This range offers a low noise model as well as an oversized condenser for use in hot climates.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MONOHAVANE - Encased, outdoor, single-compressor unit

Composition of models
• Select for each model:
The noise level,
- standard
- or LN (low noise), suitable when noise is a problem.
The condenser,
- standard
- or S and S+ (oversized) for high ambient temperatures.

DESIGNATION

MONOHV N(1) 75(2) AS(3)

(1) **P** = Chill range - **N** = Low temperature range
(2) Model
(3) **A** = Standard
AS = Oversized
AS+ = Oversized "plus"
ALN = Low noise level

DESCRIPTION

Frame / Casing
• Sheet metal frame and white pre-painted casing.
• Installed outdoors on the ground or roof.

Compressor
• Semi-hermetic piston of 7.5 to 50 HP with suction and delivery valves, casing heater and head fan for low-temperature applications.

Condenser
• From 2 to 4 fans with casing protection of hairpins.

Receiver
• With service and safety valves.

Liquid line
• Composed of a dryer filter cartridge, hygroscopic indicator and operating valve.

Control and safety
• LP control is provided with an adjustable LP pressure switch.
• HP control is provided with an adjustable HP pressure switch.
• HP safety is provided with 1 or 2 automatic-reset cartridge pressure switched (in accordance with standard EN 378-2): 2009).
• Oil differential pressure switch.

Switching enclosure
• Sealed, with main isolator switch on the side and "power on" indicator. Outputs and unit protection devices.
• Designed to accommodate as many cooling outputs.
• The cabinet is closed with a 1/4-turn screw.

ADVANTAGES

Installation
Condensing units delivered “turnkey” with factory pre-wired switching enclosure to help reduce installation time.
Oversized condenser for the AS model for installation in zones with high ambient temperatures.
The low noise ALN model is ideal for use in an urban environment.
Outputs and unit protection devices. Designed to accommodate as many cooling outputs as required.
Servicing / Maintenance
Side panels easily removed for unimpeded access to all components.
Possibility of placing the door in hood position for easy access during work inside the switching enclosure (see photo).

CERTIFICATIONS

PED 97/23/CE

OPTIONS

Low noise level
Silent condenser, noise insulated compressor compartment.
Contact us for the selection.

Oversized condenser
For use with high ambient temperatures up to 42°C,
as defined in the selection charts and up to 45°C after study.

OPTIONS

Kit	Factory	
	BAC	Suction accumulator.
	BPS	LP safety pressure switch
	MAN	HP and LP manometers.
	RLS	Oversized receiver.
	SHU	Oil separator.
	VFA	Valve + suction filter.
ANM		Lifting rings.
EVL		Solenoid valve.
	GPC	Condenser protection guard.
PAV		Anti-vibration pads.

ENCASED OUTDOOR CONDENSING UNIT

MONOBLOCK UNIT FOR PRODUCTIONS OF LOW AND CHILL TEMPERATURES

Hard Discount - Supermarkets - Hypermarkets

HFC CO_2

23 > **200** kW

MULTIWAVE

- Range with innovative design for installations where space may be a problem.
- Environmentally-friendly, natural refrigerant (CO2) for the production of cold in supermarkets.
- "Ready-to-install" range with cooling and electrical equipment grouped and connected on a common frame.
- Low energy consumption thanks to the use of EC motors, compressor speed variation and heat recovery (optional extras)
- Micro channel technology allowing a significant reduction of refrigerant charge.
- State of the art design with hidden fans for a perfect architectural integration.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

R134A CHILL TEMPERATURE CIRCUIT

Compressors
- Compressors using semi-hermetic piston technology equipped with:
  - Crankcase heater.
  - Suction and delivery shut-off valves.
  - HP and LP tapping points with Schrader connector.
- Optional 30 to 70 Hz speed controller on the first compressor.

Collectors
- A general suction filter unit with removable cartridge.
- Copper suction and delivery header for diameters of less than 3"1/8 and stainless steel for larger diameters.
- Thermal insulation of the suction header, filter and suction piping optional.

Connection pack
- 1 connection valve on the suction and liquid supply line.

Oil line
- Removable oil separator by-pass valve (option).
- Oil receiver with high and low indicator and shut-off valve.
- Oil return with filter and indicator.
- Float or electronic oil level monitoring system (optional).
- Non-adjustable, receiver degassing differential valve connected to the LP collector.
- Copper oil collector with flexible connection for each compressor.

Condenser
- Air condenser equipped with aluminium multi-channel coils positioned in "V" form offering greater compactness, long-term reliability and strength (very high impact resistance) as well as a high corrosion resistance.
- High reliability electronic switching fan motors (EC) enable optimized operation of your installation.
  - Ø 800 mm: EC1 (EC oversized motor) = up to 1020 rpm.
  - Ø 800 mm: EC2 = up to 730 rpm.

Liquid station
- Inclined horizontal liquid receiver with inlet/outlet shut-off valves equipped with liquid level indicators.
- 1 or 2 parallel dryer filters with removable filter cartridge and 3/8" SAE load valve
- 1 liquid outlet with indicator and shut-off valve.
- 1 or 2 blow-out valves on the 3-way valve to protect the receiver against pressure build-up.
- Liquid/steam exchanger with by-pass valves in suction side and liquid side.
- Refrigerant level alarm (optional).

Monitoring devices
- **Per compressor:**
  - LP pressure switch connected to the compressor (option).
  - 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to standard EN 378-2: 2009).
  - 1 LP adjustable pressure switch for back-up pressure operation.
  - Oil differential pressure switch.
  - INT safety thermistor box.
- **Per rack:**
  - General LP safety pressure switch.
  - General HP safety pressure switch.
  - Framing HP and LP pressure switch.
  - Set of HP and LP manometers, diameter 100 mm, class 1.
  - LP and HP sensors for normal operation control.
  - Additional HP probe for condenser fan back-up operation.

CO_2 LOW TEMPERATURE CIRCUIT

Compressors
- Compressors using semi-hermetic piston technology equipped with:
  - Crankcase heater.
  - Suction and delivery shut-off valves.
  - HP and LP tapping points with Schrader connector.
- Optional 30 to 70 Hz speed controller on the first compressor.

Collectors
- A general filter unit with tapping point and 2 maintenance valves (1/4" SAE).
- Copper suction and delivery collector.
- Liquid suction accumulator with oil return via siphon and discharge valve.
- Brazed plate liquid/steam heat-exchanger with by-pass valve on the liquid suction side.

Insulation
- Thermal insulation of the entire refrigeration circuit with the exception of delivery and oil lines.

Connection pack
- 1 connection valve on the suction and liquid supply line.

Oil line
- Removable oil separator by-pass valve (option) and discharge valve.
- Oil receiver with high and low indicator, shut-off valve and discharge valve.
- Oil return with filter and indicator.
- Electronic level controller with shut-off valve per compressor.
- Non-adjustable, receiver degassing differential valve connected to the LP collector.
- Copper oil collector with flexible connection for each compressor.

Condenser-unit cooler
- Thermally insulated brazed plate heat-exchanger.
- Electronic expansion valve with probe and sensor for control of superheating during normal operation.
- Thermostatic expansion valve coupled with a solenoid valve in parallel with an electronic expansion valve in back-up operation.
- Connection valves are included on the unit for connection of an optional air desuperheater.

Liquid station
- Inclined horizontal liquid receiver with inlet/outlet shut-off valves equipped with liquid level indicators.
- 2 blow-out valves on the 3-way valve to protect the receiver against pressure build-up.
- 1 dryer filter with removable filter cartridge with a 3/8" SAE load valve and 2 maintenance valves (1/4" SAE). Optional by-pass valve.
- Optoelectronic level alarm fitted to the liquid column in parallel with the receiver and height adjustable.
- 1 liquid outlet with indicator.
- Thermal insulation of the liquid station.

Safety unit
- Condensing unit filled with R134a with refrigerated connected to the CO_2 liquid receiver via a plate unit cooler.

Monitoring devices
- **Per compressor:**
  - LP pressure switch connected to the compressor.
  - 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to standard EN 378-2: 2009).
  - 1 LP adjustable pressure switch for back-up pressure operation.
  - INT safety thermistor box.
- **Per rack:**
  - General LP safety pressure switch.
  - General HP safety pressure switch.
  - Framing HP and LP pressure switch.
  - Set of HP and LP manometers, diameter 100 mm, class 1.
  - LP and HP sensors for normal operation control.

Electrical switching enclosure
- A dedicated switching enclosure for control of the unit.
- An optional electrical switching enclosure.

MULTIWAVE - Encased, outdoor, multi-compressor unit

DESIGNATION

MCU(1)-C(2) 3x(3) 4GE23(4) / 3x(5) 2JSL2(6) A(7) 1W(8) EC1(9)

(1) **MCU** = Encased outdoor condensing unit
MCO = Encased rack (separate condenser)
MMR = Machine room rack
(2) Fluid: **C** = Cascade R134a / Sub-critical CO_2
(3) Number of chill compressors
(4) Type of chill compressors
(5) Number of low temp. compressors
(6) Type of low temp. compressors
(7) Condenser version:
A = Standard
AS = Oversized condenser
LN = Low noise
LNS = Low noise with oversized condenser
(8) Number of condensers
(9) EC motors:
EC1 (EC oversized motor) = up to 1020 rpm.
EC2 = up to 730 rpm.

CERTIFICATIONS

PED 97/23/CE

ADVANTAGES

Installation

Optimisation of installation costs:
- Ready-to-install monoblock unit for productions of low and chill temperatures.
- Micro-channel technology for reduction of the coolant volume required.

Reduced size:
- Range designed to optimise the installation footprint with a combination of cutting-edge architecture and innovative technology. Use of micro-channel coils and associated layout.

Ideal for use in an urban environment:
- Use of EC motors with a low rotation speed associated with a compressor compartment with noise-proofing insulation considerably reduces noise levels.
- Added to this, the SilenTop (optional) is used to conceal the fans and serves as an acoustic enclosure.

Servicing

- The high mechanical resistance of the micro-channel coils enable fast and easy cleaning using a high-pressure cleaner.

Maintenance

- The door of the electrical switching enclosure is hinged for top opening which provides protection against rain and snow during maintenance work.
- The micro-channel coils are easily accessible and removable for easy maintenance.

OPTIONS

Kit	Factory	
		Connection
	PR2	External connection valves (1 delivery, 2 suction, 2 liquid)
	PR3	External connection valves (1 delivery, 3 suction, 3 liquid)
		Control
	BPS	LP safety pressure switch per compressor
	CS1	Additional 4-20mA sensor
	CS2	Additional 1-5V ratiometric sensor
	HPG	HP general pressure switch
	TXL	Electronic compressor oil level regulator
		Cooling circuit
	DS1	Air desuperheater (kit)
	DS2	Plate desuperheater
	SRL	Liquid sub-cooling
	RHS	Oversized oil receiver
	BSH	Oil separator by-pass
	BFA	By-pass Suction filter
		Receiver
	RLHS	Oversized horizontal receiver
		Liquid
	ALF	Electronic level alarm on the oil receiver.
	ALR	Opto-electronic refrigerant level alarm.
	BD1	Single liquid dryer by-pass
		Condenser
	ACR	SilenTop
	G2F	Protection guard (2 faces)
	BXT	Blygold Polual XT coil protection (please contact us)
	VAR	Compressor speed variation
		Miscellaneous
	ANM	Lifting rings
	CDC	Customer outlets cabinet module
	ECO	Container packaging

5 > **290** kW

MULTIHAVANE

- Vertical-blowing, multi-compressor, encased air condensing units for outdoor installation on the floor or roof.
- This range offers a low noise model as well as an oversized condenser for use in hot climates.
- Entire unit completely pre-wired including Scroll or Semi-hermetic compressors.
- Capacity ratings of the range:
  - High-temperature application from 100 to 290 kW
  - Medium-temperature application from 15 to 235 kW
  - Low temperature application from 5 to 70 kW

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MULTIHAVANE - Encased, outdoor, multi-compressor unit

FRIGA-BOHN HK REFRIGERATION

Composition of models

• Select for each model:

The compressor technology,

- OCT (Octagon semi-hermetic piston),
- or Sc (Scroll),
- or SH (Semi-Hermetic piston).

The noise level,

- standard
- or LN (low noise) suitable when noise is a problem (noise isolation of the compressor compartment and condenser with up to 16 fans).

The condenser,

- standard
- or S (oversized) for high ambient temperatures.

DESCRIPTION

Frame / Casing

- The frame base is made of folded, high resistance, galvanized sheet metal.
- The casing is composed of white pre-painted sheet metal.
- The casing panels may be easily removed with the ¼-turn latches.
- The base frame is equipped with lifting rings for easy handling.

Compressors

- The compressors are filled with R404A ester oil and equipped as indicated in the table below:

	SH Octagon	Scroll	SH
Number of compressors	2-3-4	2-3-4	2-3
Casing heater	Yes	Yes	Yes
Suction and delivery valves	Yes	Yes	Yes
HP safety pressure switch	Yes	Yes	Yes
Oil pump	From 4VC	No	Yes
Head fan	Low temp. range	No	Low temp. range

Collectors

- The suction and delivery collectors are made of stainless steel 304L for SH and copper for Sc and OCT, secured with polypropylene straps on the suction side and high temperature resistant polyamide straps on the delivery side.
- A general filter unit is used on the suction side or one per compressor according to model with removable cartridge(s).

Oil line

- LP oil return with removable oil separator and tank equipped with high/low level indicator, shut-off valve and calibrated degassing valve in the LP collector with shut-off valve.
- Oil level regulator with float system and a shut-off valve per compressor.

Condenser

- The MULTIHAVANE range includes condensers of the type NEOSTAR (L or P) and WA, which are controlled with cascade shutdown.

Receiver

- Horizontal liquid receiver with 2 inlet/outlet shutoff valves.
- Single or double safety valve with 3-way valve if the capacity is > or = to 100 l.

Liquid line

- Liquid line with dryer filter with removable cartridge(s), 3/8" SAE fill valve with hydroscopic indicator and shut-off valve(s).

Connection valves

- Liquid suction valve and delivery valve according on models.

Control and safety

- The unit is controlled as follows:
- For units with 2 Scroll or Octagon compressors: Pressure control with 1 LP pressure switch per compressor and 1 control HP pressure switch per condenser fan.
- For the other units: Electronic control with LP/HP sensors delivering a 4/20mA signal
- A general safety LP pressure switch.
- One oil differential pressure switch per compressor (only for semi-hermetic compressors and from compressor 4VC for OCT).
- 1 or 2 automatic reset HP pressure switch(s) per compressor. (compliant with standard EN 378-2: 2009) 2009)
- Two manometers (LP+HP).
- Connection of each element with 1/4" flexible hose.

Switching enclosure

- Switching enclosure with double swing doors and latching system.
- Main isolator switch on front panel with "Power on" indicator.
- All electrical components are connected to a board containing the condensing unit protection and control elements.

ADVANTAGES

Installation

Condensing units delivered ready for installation with factory pre-wired switching enclosure to help reduce installation time.

The base frame is equipped with lifting rings for easy handling.

Oversized condenser for the AS model for installation in zones with high ambient temperatures.

The low noise ALN model is ideal for use in an urban environment.

Servicing / Maintenance

The side panels may be simply removed with 1/4 turn latches offering easy access to all components.

The electrical enclosure has double swing doors for easy access during all interventions.

OPTIONS

Low noise level

Silent condenser, noise insulated compressor compartment.
Contact us for the selection.

Oversized condenser

For use with high ambient temperatures up to 43°C,
as defined in the selection charts.

DESIGNATION

MHV SH(1) 3(2) PHT(3)
D4DH250(4) ALN(5) C5(6) P(7)6(8)-9(9)

(1) Compressor technology:
SC = Scroll - **OCT** = Octagon - **SH** = Semi-hermetic
(2) Number of compressor
(3) **N** = Low temperature / **te = - 35°C**
P = Chill temperature / **te = - 10°C**
PHT = Chill (high-temperature) / **te = 0°C**
(4) Type of compressor
(5) Condenser model:
A = Standard - **AS** = Oversized - **ALN** = Low noise
(6) Type of casing: **C1 - C2 - C3 - C4 - C5**
(7) Fan arrangement:
L = in line - **P** = in parallel
(8) Number of fans
(9) Type of module or fan Ø:
A = 1200 - **B** = 1500 - **D** = 2000 - **5** = 500 mm - **6** = 630 mm

OPTIONS

Kit	Factory	
	PR2	2 suction return valves and 2 liquid delivery valves (for SH model only).
	BP1	Additional LP pressure switch.
	BPS	LP safety pressure switch per compressor (automatic reset).
	CDP	LP/HP pressure sensors, 4/20mA signal.
	HPG	General HP pressure switch.
	HPS	Additional HP pressure switch.
	BAC	Suction accumulator (except SC), with suction or gravity oil return system according to models.
	SIL	Muffler (for SH model only).
	TXL	Electronic compressor oil level regulator.
	RLS	Oversized liquid receiver.
	ALR	Opto-electronic refrigerant level alarm.
	SSD	Double safety valve with 3-way valve only for receivers with a capacity of less than 100L (standard for other models).
	BAE	Protection of fins.
	COQ	Noise insulation casing on Scroll (except ZF15, ZB38 and ZB45).
	GPC	Condenser protection guard.

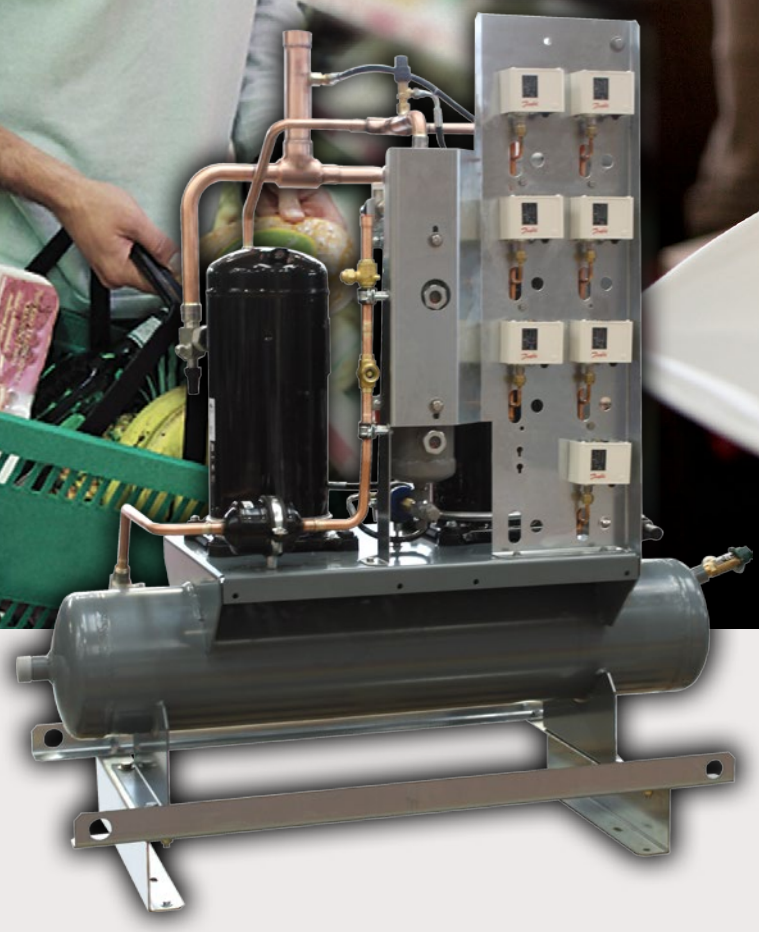
COMPRESSOR RECEIVER RACK

SCROLL COMPRESSORS

Bars - Restaurants - Corner shops - Mini-markets



HFC

8 > **55** kW

DUO MR

- A range specially designed to meet the needs and expectations of today's market, in particular with regard to compactness, reliability and noise level.
- The unit comprises 2 Scroll compressors, one of which DIGITAL™, enabling modulation of power according to multiple-station configurations.
- Supplied complete and ready to install.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DUO MR - Scroll compressor receiver rack

DESCRIPTION

Compressors
- 2 Scroll technology compressors, one of which equipped with a DIGITAL™ power controller.
- Equipped with shut-off valves on the suction and delivery sides, casing heater and rigid suspension elements.
- Unit factory pre-wired with a 3 m supply cable possible.

Collectors
- Copper suction and delivery pipes.

Oil line
- HP oil separator incorporated into the oil tank with high and low level indicators.
- HP oil return line with filter.
- Electronic oil level controller.

Liquid receiver
- Horizontal receiver with a capacity of 40L.
- 2 inlet/outlet shut-off valves.
- Liquid outlet equipped with a dryer filter, an indicator and a liquid outlet valve.
- Single safety valve.

Monitoring devices
- 1 general LP safety pressure switch.
- 1 LP regulator pressure switch per compressor.
- 1 automatic-reset HP pressure switch per compressor.
- 2 HP regulator pressure switches.
- 1 LPE and HPE support pressure switch (switch-over to back-up mode).
- 1 LP sensor.

Electrical enclosure (optional)
- Idc 15kA.
- Main isolator switch.
- Electronic control per PLC EC2-552.
- Pressure control value in back-up mode with anti-run cycle timer.
- Switch-over to back-up operation:
  - **Automatic** with LPE/HPE support pressure switches.
  - **Manual** with a switch on the electrical enclosure door.
- 5 cooling station outputs 2x10A
- 1 or 2 condenser fan outlets:

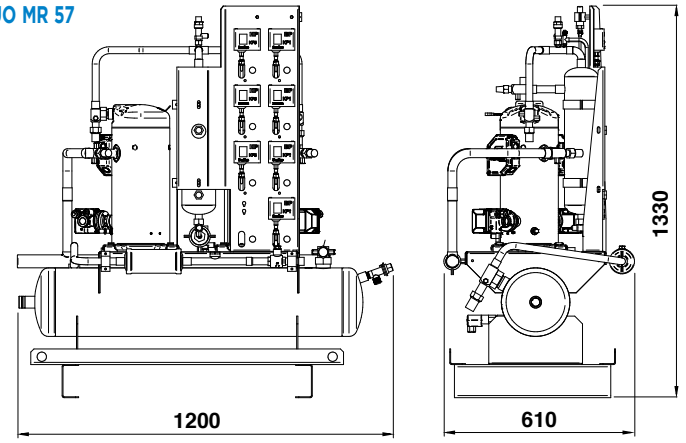
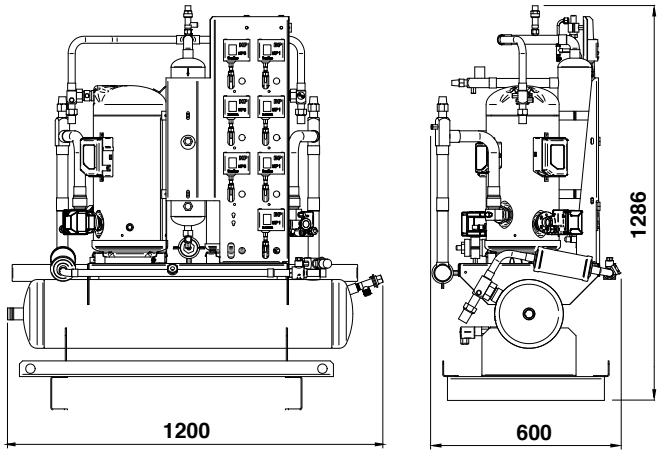
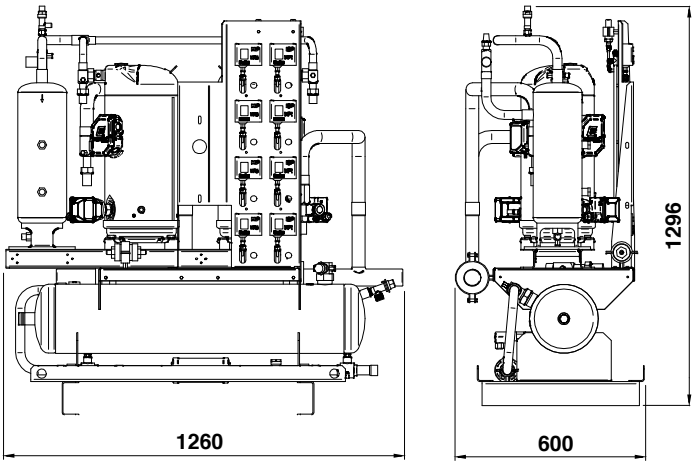
DUO MR 57



DUO MR 76



DUO MR 114



A complete solution for your refrigeration installation...

COMPRESSOR RECEIVER RACK

DUO MR

- Variation of power enabling precise adjustment of the capacity according to cooling requirement.
- Electronic oil regulation with oil separator with 2 l. receiver for safety and reliability.
- 40 l. largely dimensioned liquid receiver.
- Factory pre-wired with a 3 m cable.
- Noise insulation casing (optional) for a lower noise level: - 6 dB(A).

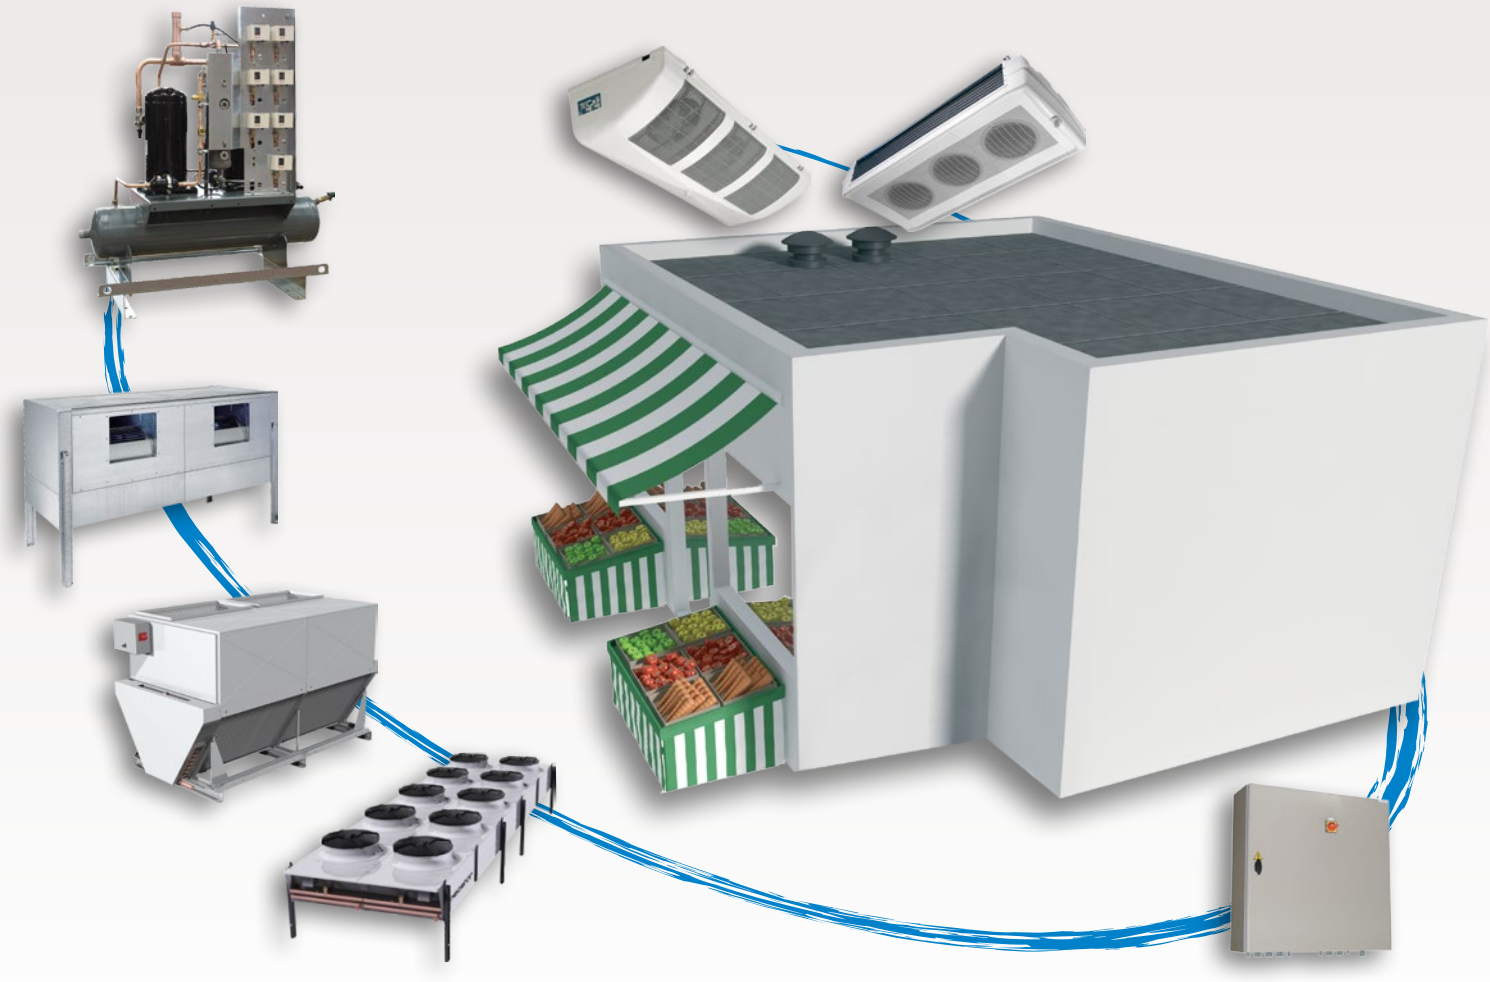
UNIT COOLERS

MR

- Low depth: only 209 mm enabling optimum use of storage space in the cold room.
- Robust and corrosion-resistant unit: coils totally anti-corrosion treated as standard, ABS casing and stainless steel screws.

TA

- Exceptionally low noise levels with the 6 or 8-pole versions.
- Low air speed guarantees comfort as well as precise control of temperature and hygrometry.
- Robust ABS casing with rounded corners combining hygiene and safety.



INDOOR CONDENSERS

CCT 2x12T B2

- Available air pressure up to 150 Pa.
- 8 air inlet/outlet combinations.
- The unit may be dismantled for installation in difficult access zones.
- Factory pre-wired fans.

CCV 1

- EC motors for optimised energy consumption.
- Low noise
- Available air pressure up to 200 Pa.
- The unit may be dismantled for installation in difficult access zones.
- Factory pre-wired fan.

OUTDOOR CONDENSER

NEOSTAR SU 16Y L02 B2

- Perfect incorporation in an urban environment, extremely quiet motors (Lp 22 dB(A) at 10m).
- Factory pre-wired fans.

ELECTRICAL ENCLOSURE

Electronic control EC2-552 with switch-over to back-up operation with automatic pressure control switch. Supplied with complete electrical system, refrigeration and condenser fan outputs are incorporated.

FRIGA-BOHN

HK® REFRIGERATION

eCO2Gen - CO2 Semi-Hermetic Piston rack

FRIGA-BOHN HK REFRIGERATION

DESCRIPTION

Frame
• Thick, folded, galvanized sheet steel monobock unit.

Compressors
• Compressors using semi-hermetic piston technology equipped with:
- Crankcase heater.
- Suction and delivery shut-off valves.
- HP and LP tapping points with Schrader connector.

Collectors
• A general filter unit with tapping point and by-pass valves and 2 maintenance valves (1/4" SAE).
• Copper suction and delivery collector.
• Liquid suction accumulator with oil return via siphon and discharge valve.

Insulation
• Thermal insulation of the entire refrigeration circuit with the exception of delivery and oil lines.

Oil line
• Removable oil separator by-pass valve and discharge valve.
• Oil receiver with high and low indicator, shut-off valve and discharge valve.
• Oil return with filter and indicator.
• Electronic level controller with shut-off valve per compressor.
• Non-adjustable, receiver degassing differential valve connected to the LP collector.
• Copper oil collector with flexible connection for each compressor.

Liquid station
• Horizontal liquid receiver with shutoff valves.
• Double safety shut-off valve with inverter switch.
• Removable cartridge dryer with by-pass valves and 2 maintenance valves (1/4" SAE).
• Optoelectronic level alarm fitted to the liquid column in parallel with the receiver and height adjustable.
• Liquid/steam exchanger with by-pass valves in suction side and liquid side.

Connection pack
• 1 connection valve on the suction and liquid supply line.

Monitoring devices
• **Per compressor:**
- LP pressure switch connected to the compressor.
- 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to standard EN 378-2: 2009).
- INT safety thermistor box.
• **Per rack:**
- General LP safety pressure switch.
- General HP safety pressure switch.
- Framing HP and LP pressure switch.
- Set of HP and LP manometers, diameter 100 mm, class 1.
- LP and HP sensors for normal operation control.
- LP and HP sensors for back-up operation control.

Condenser
• Multi-tube heat-exchanger with discharge valve(s).
• **Direct expansion model:**
Siemens "polycool" electronic expansion valve with probe and sensor for control of superheating during normal operation.
Thermostatic expansion valve coupled with a solenoid valve in parallel with an electronic expansion valve in back-up operation.
• **Glycol water model:**
Supply of a glycol water flow controller and thermostat kit.

Safety unit
• Condensing unit filled with R404A with refrigerated connected to the CO2 liquid receiver via a plate unit cooler.

FRIGA-BOHN

HK® REFRIGERATION

eCO / eMR - CO_2 compressor rack

FRIGA-BOHN HK REFRIGERATION

DESCRIPTION

Frame
- Compressor rack: monoblock frame designed to avoid vibration-related problems.
- Liquid station:
  - Folded galvanized sheet steel monobock unit.
  - Anti-vibration pads (kit).

Compressors
- Compressors using semi-hermetic piston technology equipped with:
  - Crankcase heater.
  - Suction and delivery shut-off valves.
  - HP and LP tapping points with Schrader connector.

Collectors
- A general filter unit or per compressor.
- Copper suction and discharge collector.
- Drip tray under suction collector.

Insulation
- Thick thermal insulation of liquid lines.

Oil line
- Removable oil separator with discharge valve.
- Oil receiver with high and low indicator, shut-off valve and discharge valve.
- Oil return with filter and indicator.
- Electronic level controller with shut-off valve per compressor.
- Non-adjustable, receiver degassing differential valve connected to the LP collector.
- Copper oil collector with flexible connection for each compressor.

Liquid station
- Horizontal liquid receiver with shutoff valves.
- Double safety shut-off valve with inverter switch.
- Removable cartridge dryer with maintenance valve (1/4" SAE).
- Optoelectronic level alarm fitted to the liquid receiver (high and low level).
- Liquid / vapor plate heat exchanger.
- Sight glass.

Connection pack
- 1 connection valve on the suction and liquid supply line.

Monitoring devices
- **Per compressor:**
  - LP pressure switch connected to the compressor.
  - 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to standard EN 378-2: 2009).
  - INT safety thermistor box.
- **Per rack:**
  - General LP safety pressure switch.
  - General HP safety pressure switch.
  - HP and LP pressure switch for automatic back-up operation control.
  - Set of HP and LP manometers, diameter 100 mm, class 1.
  - LP and HP sensors for normal operation control.
  - LP and HP sensors for back-up operation control.

Condenser
- Brazed plate exchanger.
- Supply of a glycol water flow controller and thermostat kit.
- Desuperheater (supplied separately) located upstream of the condenser.

Safety unit (option)
- Condensing unit filled with R134a with refrigerated connected to the CO_2 liquid receiver via a plate unit cooler.

HK® REFRIGERATION

eCO2Boost - CO2 Transcritical Booster Rack

MARKET SEGMENTS

Supermarkets and Hypermarkets

ADVANTAGES

Advantages of CO2 transcritical Solution

- HP circuit: 120 Bar
- Positive rack suction circuit and liquid receiver: 45 Bar
- Negative rack suction circuit: 30 Bar

Product advantages

Solid steel galvanized bent thick plate for installation in machine room.

DESCRIPTION

Operating pressure

- HP circuit: 120 Bar.
- Positive rack suction circuit and liquid receiver: 45 Bar.
- Negative rack suction circuit: 30 Bar.

Frame

- Thick, folded, galvanized sheet steel monobock unit for installation in machine room.

Compressors

- Bitzer or Copeland.
- Compressors using semi-hermetic piston technology (or scroll for negative racks with Copeland compressors) equipped with:
  - Crankcase heater.
  - Suction and delivery shut-off valves.
  - HP and LP tapping points with Schrader connector.

Collectors / Pipes

- A general filter unit on negative and positive rack suction.
- Copper or stainless steel manifold and piping depending on the diameters.
- Safety valve on:
  - negative rack suction manifold (30 Bar).
  - positive rack suction manifold (45 Bar).
  - positive rack discharge manifold (120 Bar).

Insulation

- Thermal insulation of the entire refrigeration circuit with the exception of delivery and oil lines.

Oil return system

- Removable oil separator of type combining oil level regulator and oil return electro-valve. By-pass of the oil separator.
- Oil receiver with high and low indicator, shut-off valve.
- Oil return with filter and indicator.
- INT280 KRIWAN level controller supply 230V with isolation valve.
- Copper oil collector with flexible connection for each compressor.

Liquid station

- Vertical liquid receiver with shutoff valves.
- Double safety shut-off valve with inverter switch.
- Removable cartridge dryer with by-pass valves.
- Gas cooler pressure control valve connected upstream of the liquid receiver.
- Flash gas valve for controlling liquid receiver pressure connected between liquid receiver and positive rack suction.
- Liquid sub-cooler with plate heat exchanger and equipped with an electronic thermostatic valve.

Connection pack

- 1 connecting valve on the suction of each rack and the general liquid discharge.

Monitoring and Security devices

- **Per compressor:**
  - 2 HP auto-reset pressure switches connected to the cylinder head.
  - INT safety thermistor case.
- **Per rack:**
  - LP general safety pressure switch.
  - LP ratiometric pressure sensor (-1/34 B) for standard operation.
  - LP pressure gauge diameter 100 mm class 1.
- **For positive rack:**
  - LP general safety pressure switch.
  - HP ratiometric pressure sensor (-1/159 B) for standard operation.
  - LP ratiometric pressure sensor (-1/59 B) for standard operation.
  - LP and HP pressure gauge diameter 100 mm class 1.
  - Frequency converter for the 1st compressor of the positive rack.

eCO2Boost - CO2 Transcritical Booster Rack

FRIGA-BOHN HK REFRIGERATION

Safety unit
- 1 kW refrigeration unit directly triggered by CO2 pressure via an auto-reset pressure switch and must be connected to the store's backup power supply.
- This unit functions at R134a and is delivered loaded and ready-to-use.

Electrical cabinet
- Electric cabinet mounted and electrically connected to the rack's frame.
- It houses the power for and control of the rack (outlets for cooling sites are not included).
- Management can be achieved with CAREL, DANFOSS or AOE PLCs.

CERTIFICATIONS

DESP 97/23/CE

OPTIONS

- Anti-vibration pads.
- Frequency converter for the 1st compressor of the negative rack or Digital scroll if Copeland compressor.
- Suction accumulator with oil return by siphon for negative rack.
- Suction accumulator with oil return by siphon for positive rack.
- Optoelectronic low-level alarm for the liquid receiver.
- Optoelectronic high-level alarm for the liquid receiver.
- Optoelectronic low-level alarm for the oil receiver.
- Double liquid receiver (PSxV < 10000 bar.L).

Heat recovery
The heat produced, instead of being carried away by the gas cooler may be used to create a complete store heating and refrigeration system:
- Heat recovery for store heating system: addition of high-pressure exchanger mounted and connected to the CO2 circuit with 3-way, servo-controlled valve.
- Heat recovery for domestic hot water: high-pressure exchanger mounted and connected to the CO2 circuit with 3-way, servo-controlled valve.

Backup operations **(different configurations available)**
- Backup controllers mounted and electrically connected in the electric cabinet. Switching via LP monitoring pressure switches on the positive and negative racks.
- Pre-programmed backup controllers delivered separately.
- HP control and flash gas valves delivered separately.
- HP control and flash gas valves insulated and connected to refrigeration and electricity with switching:
  - automatically if backup controllers present,
  - manually by power switch located on the cabinet door.

Performance enhancement and warm areas
- Parallel compression (consult us). This option consists of the addition of one or several compressors which are dedicated to the suction of flash gas vapors coming from the liquid receiver. They function as periodic replacement for the flash gas valve during warm periods of the year in order to improve the efficiency of the system.

Other options
- Ejectors, addition of cooling function upon existing the gas cooler (under additional cooling).

FEATURES

	Combinations	Power ratings
MT Compressors*	3 > 6	50 > 250KW
LT Compressors*	2 > 4	15 > 100 KW
Liquid receiver capacity	80 > 400l	

** Available brands: Copeland (semi sealed MT and scroll in LT) or Bitzer (semi sealed)*

L1 = 1533 mm > Single liquid receiver
L1 = 2041 mm > Single liquid receiver with heat recovery
L1 = 2041 mm > Double liquid receiver
L1 = 2447 mm > Double liquid receiver with heat recovery

L2 = 2041 mm > MT rack 3 compressors
L2 = 2549 mm > MT rack 4 compressors
L2 = 3057 mm > MT rack 5 compressors
L2 = 3565 mm > MT rack 6 compressors

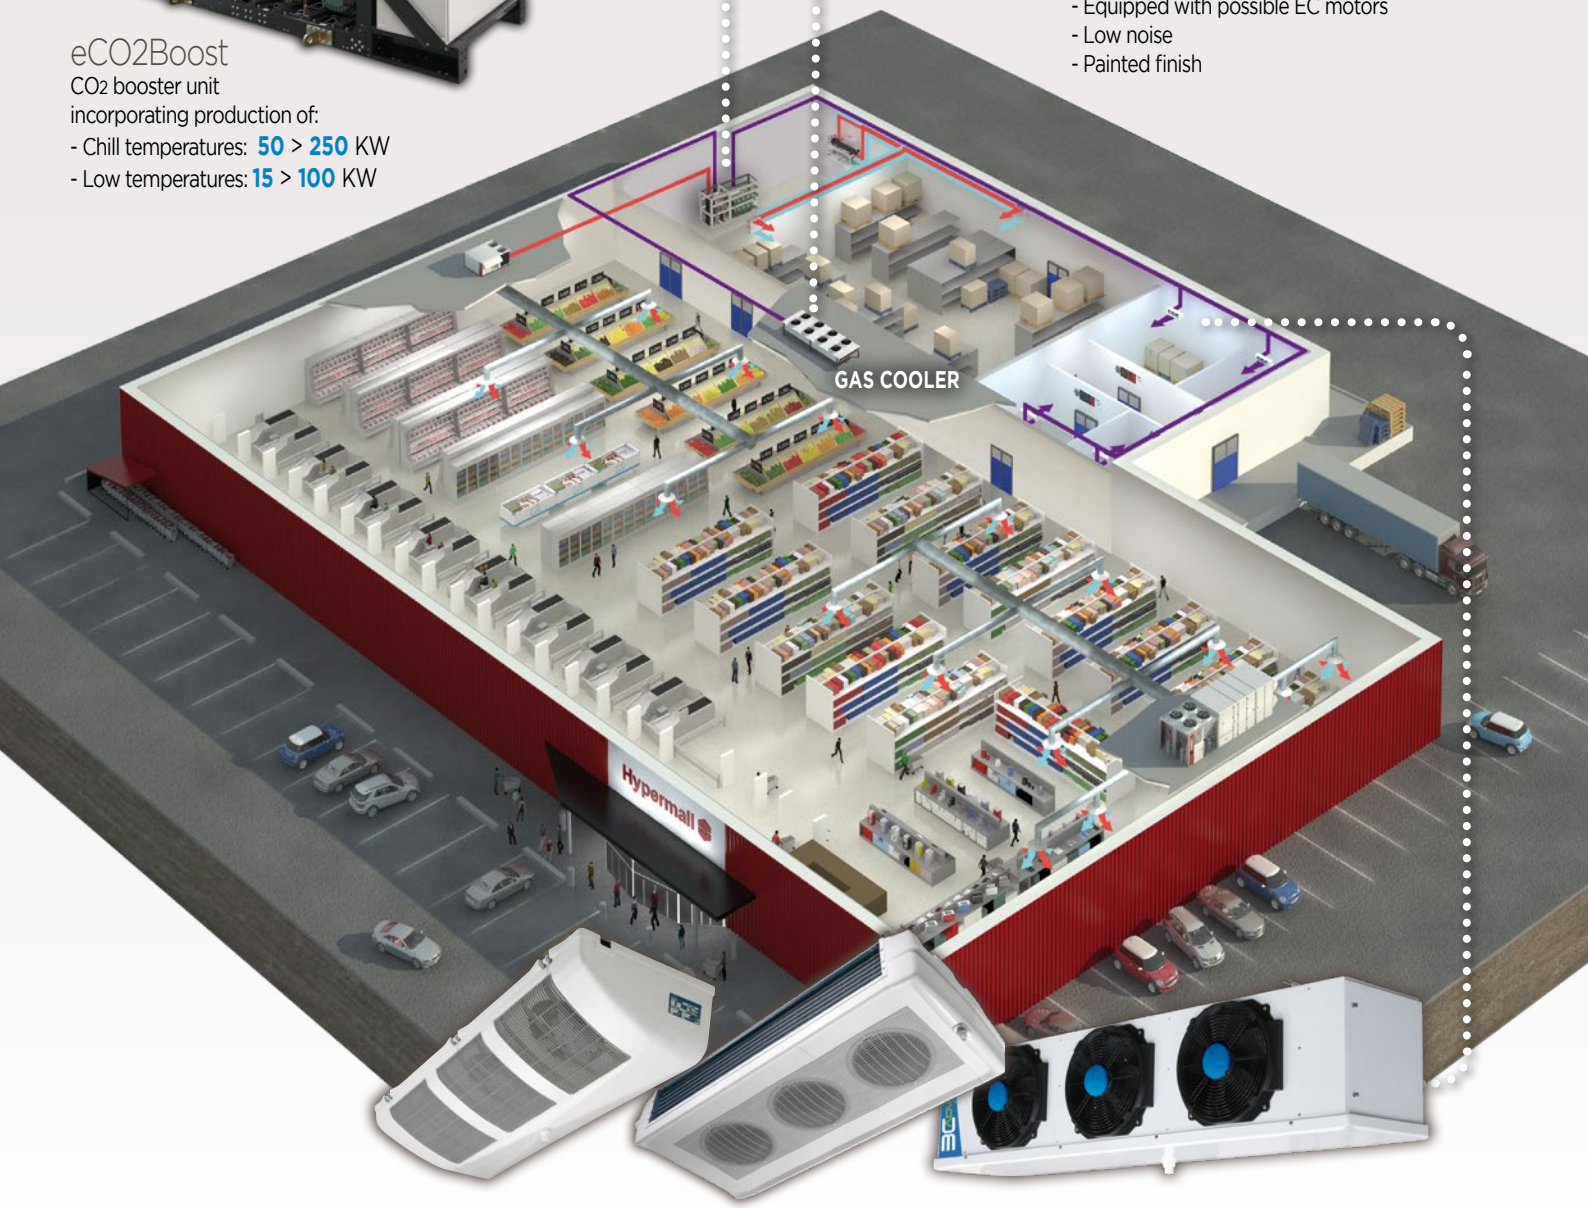
GLOBAL SOLUTION

eCO2Boost

CO_2 booster unit
incorporating production of:
- Chill temperatures: **50** > **250** KW
- Low temperatures: **15** > **100** KW

Gas cooler

Provision of standard Gas cooler or fitted with the vaporization option and treatment adjusted as follows:
- Equipped with possible EC motors
- Low noise
- Painted finish



A range of CO_2 unit coolers at 45 bar in the trading area for each zone

MR
Ceiling unit coolers
0.4 > **2.6** KW

- The MR range meets the requirements for small-scale cold rooms.
- Low height: Only 209 mm which enables optimal loading of the cold room.
- Robust appliance, corrosion resistant: battery fully anti-corrosion treated as standard, ABS body and stainless steel fasteners.

TA
Dual-discharge unit coolers
2.1 > **13.2** KW

- The TA range meets the requirements of laboratories, cutting and work rooms, airlocks, etc...
- Excellent level of acoustic comfort in 6 or 8 pole version.
- Low air velocity ensuring comfort and precise control of the temperature and the hygrometry.
- Optimized air projection up to 12 m.
- Robust ABS body with rounded corners combining hygiene and safety.
- Intermediate drip-trays avoiding condensation on the body.

3C-A
Cubic unit coolers
1.3 > **38** KW

- The 3C-A range is intended for commercial applications and semi-industrial refrigeration or storage at low temperatures.
- Numerous possibilities for defrosting: electric, hot water and hot gas.
- Large choice of options for applications in demanding environments (steamer, stainless steel, ...).
- Optional EC motorized fan enables noise and power consumption optimization.

LENNOX
EMEA

COMPRESSOR RACK

SEMI-HERMETIC PISTONS AND SCROLL

Hard Discount - Supermarkets - Hypermarkets
Food processing - Canteen kitchens

HFC

6 > **110** kW

COMPACT

- A range specially designed to meet the needs and expectations of today's market, in particular with regard to reliability and compactness.
- Racks include 2 to 4 Scroll or Octagon Semi-Hermetic compressors.
- Folded, galvanized steel monoblock frame eliminating vibrations.
- Liquid station delivered separately.
- Copper collector and oil control line.
- Supplied non-wired, wired or with a complete switching enclosure.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DESCRIPTION

Frame
- Monoblock frame designed to avoid vibration-related problems.

Compressors
- Compressor with scroll (Copeland) or semi-hermetic piston (Octagon) technology.
- Equipped with a shut-off valve on the suction and delivery sides, casing heater and rigid suspension elements.
- Head fan for semi-hermetic piston models used in low-temperature applications.

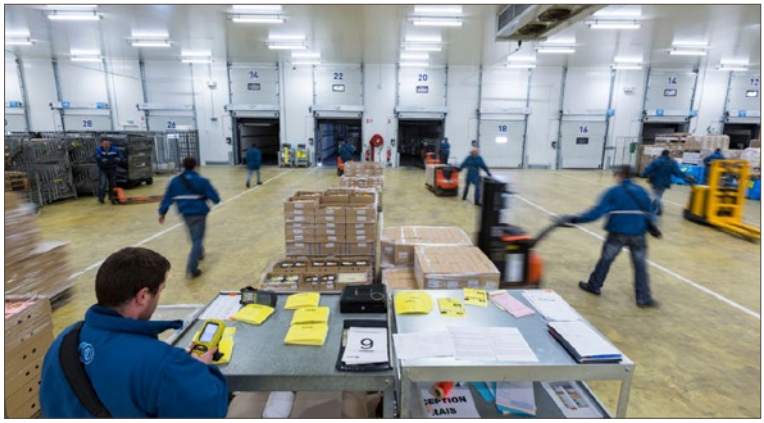
Collectors
- Copper suction and delivery pipes.
- Polypropylene fastening straps on the suction side and high-temperature resistant polyamide straps on the delivery side.
- A general filter unit on the suction side.

Oil line
- Oil separator with receiver high and low level indicator.
- Oil collector with flexible end connections.
- LP oil return line with filter and indicator.
- Oil level regulator with float system with shut-off valve per compressor for SH and electronical for Scroll.
- Degassing valve.

Liquid station
- Liquid station delivered separately.
- 2 inlet/outlet shut-off valves.
- Liquid line equipped with a removable filter dryer unit and indicator.
- Single safety valve or double (according to PED).

Connection pack
- 1 connection valve on the suction, delivery and liquid line.

Monitoring devices
- 1 general safety LP pressure switch.
- 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to EN 378-2: 2009).
- 2 manometers (LP+HP)
- 1 oil differential pressure switch per compressor for semi-hermetic piston compressor model 4TC to 4NC.



DESIGNATION

COM 2(1)P(2) / 4EES-4Y(3)

(1) Number of compressor
(2) **P** = Chill range – **N** = Low temperature range
(3) Type of compressor

CERTIFICATIONS

PED 97/23/CE

OPTIONS

Kit	Factory	
		Safety pack
	BPS	LP safety pressure switch per compressor.
	HPG	General HP safety pressure switch.
		Regulator pack
	BP1	LP pressure switch (automatic reset).
	HPS	Additional HP pressure switches.
	CDP	LP/HP pressure sensors, 4-20 mA signal.
		Miscellaneous
	BAC	Suction accumulator (only for semi-hermetic compressor).
	TXL	Traxoil oil regulator.
	RLS	Oversized liquid receiver.
	ALF	Height-adjustable refrigerant level alarm with float.
	ALR	Opto-electronic refrigerant level alarm.
	SSD	Double safety valve with 3-way valve (for receivers < 120 litres).
	BDR	Condensate drip tray under suction collectors.
PAV		Anti-vibration pads.
	ARM	Switching enclosure (contact us).

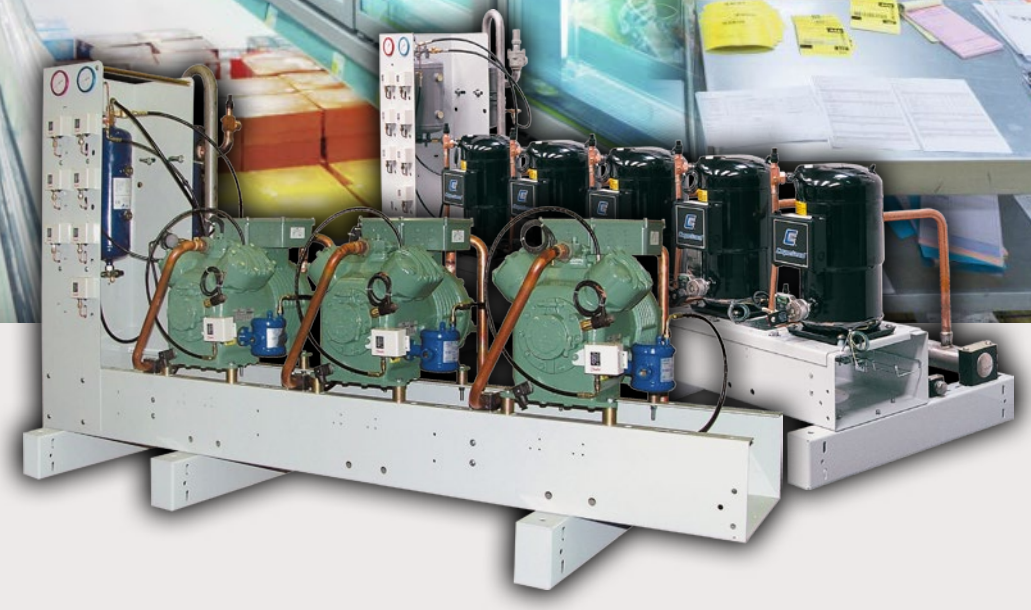
COMPRESSOR RACK

SEMI-HERMETIC PISTONS AND SCROLL

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres
Food processing



HFC

22 > **385** kW

MOPSH / MOSC

- Racks composed in standard:
  - MOPSH model with 2 to 5 semi-hermetic compressors,
  - MOSC model with 5 and 6 Scroll compressors.
- Supplied non-wired, wired or with a complete switching enclosure.
- Rack adapted for use in sites with difficult access.
- Low width 800 to 1,000 mm.
- Liquid station delivered separately.
- Painted, U-profile, monoblock frame to eliminate vibrations.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DESCRIPTION

Frame

MOPSH - MOSC

- Monoblock, painted, 4 mm thick, U-profile, folded sheet steel.

Compressors

MOPSH

- With ROTALOCK suction and delivery valves + head fan for low temperature applications, casing heater and oil pump.

MOSC

- Equipped with ROTALOCK suctions and delivery valves, casing heater, HP safety cartridge pressure switch and rigid suspension.
- The low temperature models are also equipped with an injection system with various configurations according to the compressors used: shut-off valve, filter, solenoid valve and capillary.

Collectors

MOPSH - MOSC

- Suction and delivery pipes made of stainless steel 304 L.
- Schrader pressure tapping point with a shut-off valve per collector (connection of mano-pressure switch, etc...).
- Polypropylene fastening straps on the suction side and high-temperature resistant polyamide straps on the delivery side.

MOPSH

- A general suction filter unit with removable cartridge up to 186 kW refrigeration capacity for chill and 47 kW for low temperature. One unit per compressor for higher capacities.

MOSC

- A removable cartridge filter fitted on the suction collector.

Oil line

MOPSH - MOSC

- Removable oil separator and oil receiver with high/low level Indicator and shut-off valves.
- Oil collector with flexible end connections.
- LP oil return line with filter, indicator and shut-off valve per compressor.
- Degassing valve.

MOPSH

- Level regulator with float.

Liquid station

- Liquid station delivered separately.
- Inlet/outlet shut-off valves.
- Liquid line equipped with a removable filter dryer unit ≤ 150 l. and 2 units in parallel with shut-off valves > 150 l.
- General line indicator and shut-off valve.
- Single safety valve or double (according to PED).

Monitoring devices

MOPSH - MOSC

- 1 general safety LP pressure switch.
- 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to EN 378-2: 2009).
- 2 manometers (LP+HP).

MOPSH

- Oil differential pressure switch per compressor.

DESIGNATION

MOSC 5(1)P(2) / ZB50(3)

(1) Number of compressor
(2) **P** = Chill range – **N** = Low temperature range
(3) Type of compressor

CERTIFICATIONS

PED 97/23/CE

OPTIONS

Kit	Factory	
		Connection pack
	PR1	External connection valves (1 delivery, 1 suction, 1 liquid).
	PR2	External connection valves (1 delivery, 2 suction, 2 liquid).
	PR3	External connection valves (1 delivery, 3 suction, 3 liquid).
		Safety pack
	BPS	LP safety pressure switch per compressor.
	HPG	HP general pressure switch (automatic).
		Regulator pack
	BP1	LP pressure switch (automatic) per compressor.
	HPS	Additional HP pressure switches.
	CDP	LP/HP pressure sensors, 4-20 mA signal.
		Miscellaneous
	TXL	Traxoil oil regulator (**MOPSH**).
	BD1	Single liquid dryer by-pass (1 filter) during operation.
	ALF	Height-adjustable refrigerant level alarm with float.
	ALR	Opto-electronic refrigerant level alarm.
	PAV	Anti-vibration pads (supplied with the rack not fitted).
	SSD	Double safety valve with 3-way valve (for receivers < 120 litres).
	RLS	Oversized liquid receiver.
	BDR	Condensate drip tray under suction collectors.
	VFA	Suction valve and filter on each compressor (**MOPSH**).
	CAR	Casing (with incorporated switching enclosure).
	SIL	Delivery muffler (1 per compressor) (**MOPSH**).
ANM		Rack lifting rings (supplied with the rack not fitted).
	BAC	Suction accumulator (**MOPSH**).
	EVH	Oil return solenoid valve.
	CCB	Control terminal rail wiring.
	ARM	Switching enclosure (contact us).

MOPSH - **Semi-Hermetic**

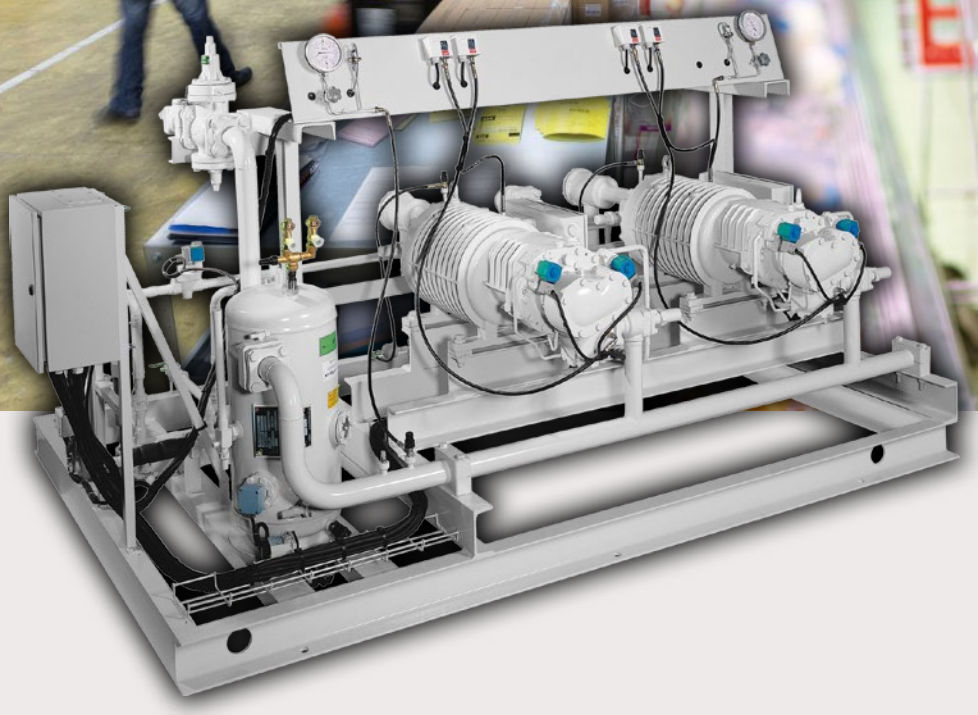
COMPRESSOR RACK

SEMI-HERMETIC SCREW COMPRESSOR

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres
Food processing



HFC

70 > **700** kW

MOVSH

- This range meets the needs and expectations of today's market in terms of reliability, efficiency and compactness.
- Various rack models with 2 to 6 screw compressors.
- Supplied with a complete switching enclosure.

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

MOVSH - Semi-hermetic screw compressor rack

DESCRIPTION

Compressors
- Screw compressors with part-winding start protection motors.
- Suction and delivery valves, non-return valve and capacity reduction.

Collectors
- 304L stainless steel suction collectors, low speed.
- Stainless steel delivery collectors.
- One suction filter with stainless steel sieve.
- Optional suction valve(s).

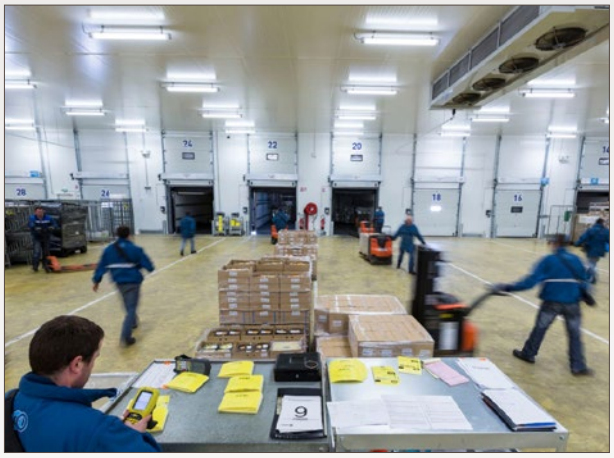
Liquid receiver
- Vertical separate from the rack.
- Inlet and outlet valves.
- Liquid indicator.
- Safety valve (double from 100 litres).

Liquid line
- Removable filter dryer.
- Operating valve.
- Liquid indicator.
- Optional liquid valve(s).

Oil circuit
- 3-way mixing valve for homogenous thermostatic oil control.
- Oil temperature max./min. safety thermostats.
- One oil indicator per compressor.
- Oil flow monitor.
- Solenoid valve.
- Manual shut-off valve.
- High-efficiency filter.

Oil separator
- Heaters.
- Control thermostat.
- Min. oil level detector.
- Indicator, safety valve, shut-off valve, non-return valve and filling valve.

Monitoring devices
- HP and LP manometers.
- 1 or 2 automatic reset HP cartridge pressure switch(s) per compressor (according to EN 378-2: 2009).
- HP pressure switch and automatic reset LP safety switch.
- Oil temperature safety and control thermostat.
- Oil temperature display thermometer.
- Delivery temperature, flow-rate and oil level protection relay.



OPTIONS

Miscellaneous
- Air or water oil cooling.
- System saver for chill racks.
- Oversized receiver.
- Water-cooled condenser fitted.
- Heat-exchanger.
- Hot-gas defrost in all its forms.
- Switching enclosure.

CERTIFICATIONS

PED 97/23/CE

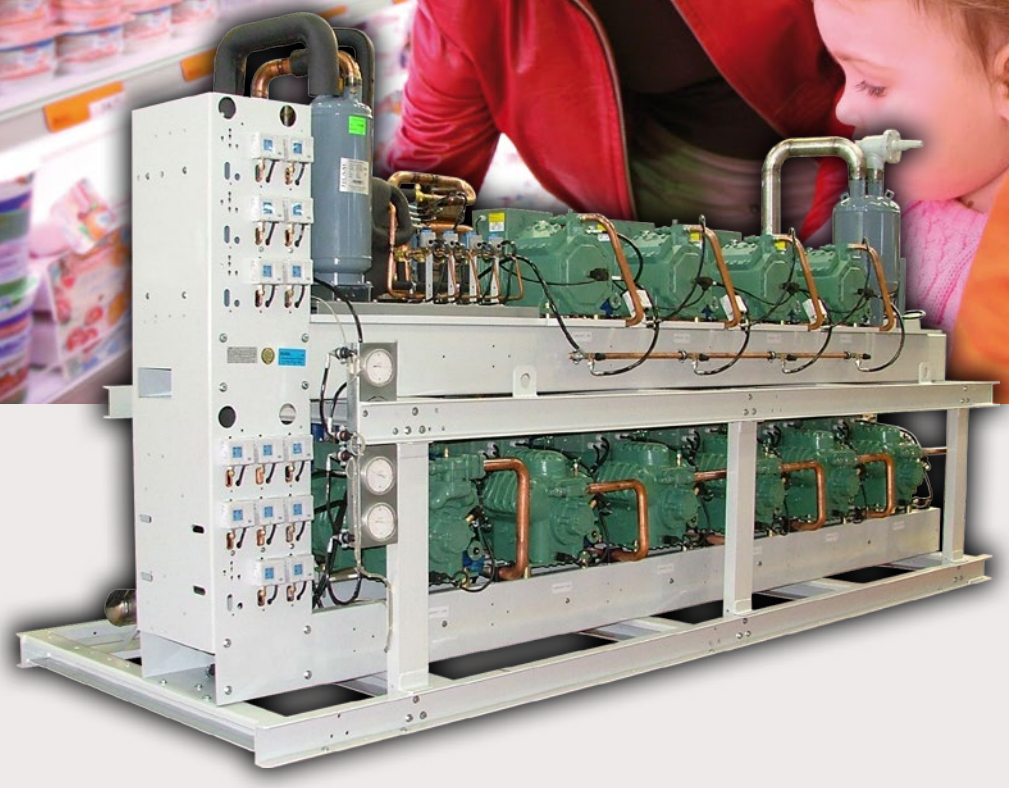
COMPRESSOR RACK

OTHER CONFIGURATIONS

Bars - Restaurants - Corner shops - Mini-markets
Hard Discount - Supermarkets - Hypermarkets



Specially adapted to suit dimensional, acoustic and energy efficiency constraints.

- **Duplex "Booster" rack.**
- **Stand-alone, duplex low-temperature and chill rack.**
- **Encased rack.**
- **Compressor rack with superimposed centrifugal fan condenser.**
- **Compressor unit with liquid receiver.**

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

DUPLEX "BOOSTER" RACK

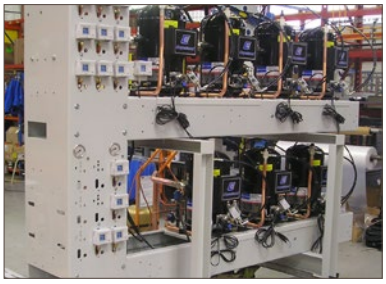
- Semi-hermetic or Scroll compressors.
- LP stage at the top and MP stage at the bottom on a superimposed or separate frame.
- Injection expansion valve, solenoid valve and desuperheating liquid suction accumulator.
- Liquid station delivered separatly with liquid subcooler exchanger (upon request).
- Regenerative heat-exchanger (upon request).
- Complete switching enclosure (not fitted).

Advantages

- Space saving in machine rooms, reduced footprint.
- 1 delivery and a single condenser for the LP and MP stages.
- Enhanced performance coefficient (COP).
- Reduced compressor size.
- Possibility to provide a removable frame to enable installation in narrow or difficult access sites (contact us for details).

STAND-ALONE, DUPLEX LOW-TEMPERATURE AND CHILL RACK

- Semi-hermetic or Scroll compressors.
- Superimposed frame with lifting rings.
- Low-temperature and chill racks with common delivery (upon request).
- Liquid station delivered separatly with liquid sub-cooler exchanger (upon request).
- Regenerative heat-exchanger (upon request).
- Complete switching enclosure (not fitted).



Advantages

- Space saving in machine rooms, reduced footprint.
- The choice of a common delivery offers a reduction in the roof space required with the installation of a single condenser unit.
- Possibility to provide a removable frame to enable installation in narrow or difficult access sites (contact us for details).

ENCASED RACK

- Semi-hermetic, Scroll or semi-hermetic screw compressors.
- Pre-paint, sheet-metal casing with removable panels secured with a ¼-turn latches, noise insulation on 6 sides with a cooling system connected to a rack available upon request.
- Frame with lifting rings.
- Incorporated switching enclosure.

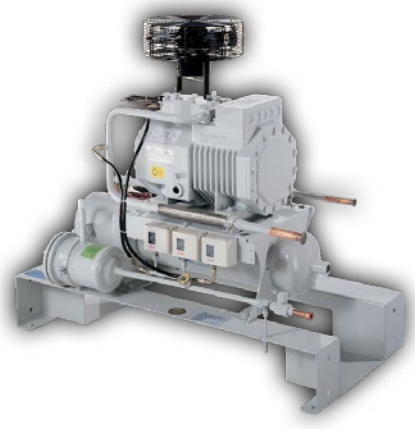
Advantages

- Designed for outdoor, floor or roof installation.
- The frame base lifting rings render handling operations easier.
- These encased racks are ideal for use in an urban environment thanks to their noise-insulated casing (upon request).
- Alternative to narrow machine rooms.

COMPRESSOR UNIT ON LIQUID RECEIVER

MONOSH

- Semi-hermetic compressor with casing heater and suction and delivery valves.
- 21 or 40-litre horizontal liquid receiver according to models with valves and safety shut-off valve.
- Optional:
- Head line (filter dryer, indicator, solenoid valve and shut-off valve),
- Suction line (suction accumulator and vibration dampers),
- Delivery line with vibration damper, muffler, oil separator
- Oil line (manual valve, indicator and solenoid valve),
- Switching enclosure (not fitted),
- Pre-painted sheet metal casing ideal for outdoor use (incorporated enclosure).



Advantages

- The MONOSH liquid receiver units have a reduced footprint.
- A wide choice of options enables adaptation of the unit to specific requirements.
- The units are delivered as standard with HP/LP pressure switches and oil differential switches, receiver shut-off valves, safety shut-off valve...
- Models with or without casing, the compressor is placed in the longitudinal direction on the receiver making it easier to extract and providing better access to the oil pump.

CHILLER

ICE WATER PRODUCTION

Hard Discount - Supermarkets - Hypermarkets
Refrigerated storage and transit stocking - Dispatch centres - Food processing
Canteen kitchens - Conservation of fruits, vegetables, flowers...

PEG / NEOSYS®

Ice water production range PEG

- Chiller with 1, 2 or 3 circuits up to 780 kW.
- Primary fluids: R134a/MEG 35% or MPG - R404A / Secondary fluids: 35% MEG or MPG.
- Installation in the machine room.
- Independent refrigeration circuits with remote air or incorporated water condenser.
- Semi-hermetic piston, Scroll or semi-hermetic screw compressors.

Encased outdoor ice water production range PEG / NEOSYS®

www.lennoxemea.com

FRIGA-BOHN

HK® REFRIGERATION

PEG 300 ... 760 RANGE

Ice water production

Refrigeration capacity

290 to 780 kW (glycol water -4°C/-8°C - +45°C condensation temperature)
280 to 690 kW (glycol water -5°C/-9ºC - +45°C condensation temperature)

Characteristics

- UPN hot-dip galvanized monoblock.
- 1, 2 or 3 separate refrigeration circuits.
- Capacity control up to 3 stages: 100% / 75% / 50%.
- One delivery valve per circuit.
- One vertical liquid receiver per circuit: liquid stations delivered on separate frames.
- Multi-tube heat-exchanger (copper tube bundle and rolled steel).
- Electronic expansion valves with regulator, probes, sensors and solenoid valves.
- Screw compressors (HSK or CSH).

EXAMPLES OF INSTALLATIONS

- Screw compressors with energy-saving plate heat-exchanger.
- Stainless steel condensate drip tray under the compressor.
- Total isolation, heat-exchanger and suction collector.
- Electronic expansion valve with complete control.
- Pre-wired switching cabinet.
- **One multi-tube or plate desuperheater per circuit.**

PEG 170 ... 320 RANGE

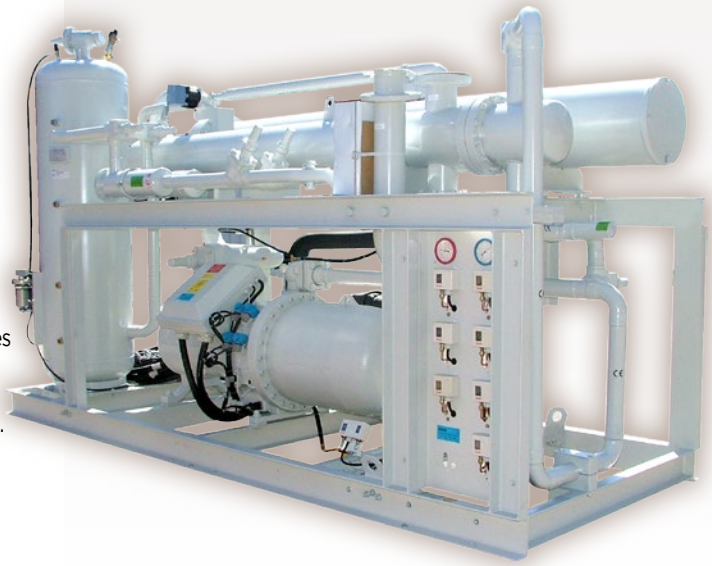
Ice water production

Refrigeration capacity

170 to 320 kW (glycol water -4°C/-8°C - +45°C condensation temperature)
180 to 330 kW (glycol water -3/-7ºC - +45°C condensation temperature)

Characteristics

- UPN hot-dip galvanized monoblock.
- 1 or 2 separate refrigeration circuits.
- One delivery valve per circuit.
- One vertical liquid receiver per circuit: liquid stations delivered on separate frames or fitted.
- Multi-tube heat-exchanger (copper tube bundle and rolled steel).
- 2 electronic expansion valves with regulator, probes, sensors and solenoid valves.
- Semi-hermetic piston: 3/4 or 5 compressors.



- Screw compressors with energy-saving plate heat-exchanger.
- Total isolation of heat-exchanger and suction collector (option).
- Electronic expansion valve with complete control
- Liquid receiver fitted.
- Pre-wired power + control circuits (upon request).
- **Paint RAL 9002 (upon request).**
- **Complete hydraulic equipment.**

ADVANTAGES

Servicing / Maintenance
The rack design is optimized to offer easy access to all components: compressors, plate heat-exchanger, desuperheater, by-pass valve,...
The by-pass valves are used to isolate the circuit to simplify operations during maintenance on the receiver, heat-exchanger,...
A condensate drip tray is placed under each compressor as standard in order to keep the machine room clean.

CERTIFICATIONS

PED 97/23/CE

PEG / NEOSYS® - Encased ice water production

PEG ENCASED, OUTDOOR RANGE

Glycol water (MEG/MPG) -4°C/-8ºC and -5°C/-9°C

- Pre-painted sheet-metal casing with removable panels secured with a ¼-turn latches, noise insulation on 6 sides with a cooling system connected to a rack available upon request.
- UPN galvanized frame with lifting rings.
- Multi-tube heat-exchanger with 2 refrigeration circuits.
- Total isolation of the heat-exchanger and suction collector.
- Liquid sub-cooling exchanger for screw compressor.
- Electronic expansion valve with complete control.
- Switching enclosure fitted.
- Complete hydraulic equipment and circuit (option).

Advantages

- Designed for outdoor floor or roof installation.
- Simple installation, the frame base lifting rings render handling operations easier.
- These encased units are ideal for use in an urban environment thanks to the noise-insulated casing (upon request).
- Alternative to narrow machine rooms.

CERTIFICATIONS

NEOSYS®

The ice water is produced with a compact, monoblock, liquid cooler with air condensation for discrete outdoor installation. This range is equipped with Scroll compressors filled with environmentally-friendly refrigerant R410A and variable-speed fans for optimized noise and energy efficiency.

Cold only

Nominal conditions

Water: +2°C/-2°C - 20% MEG - Air: +35°C

EUROVENT CERTIFIED PERFORMANCE www.eurovent-certification.com

120 kW **780 kW**

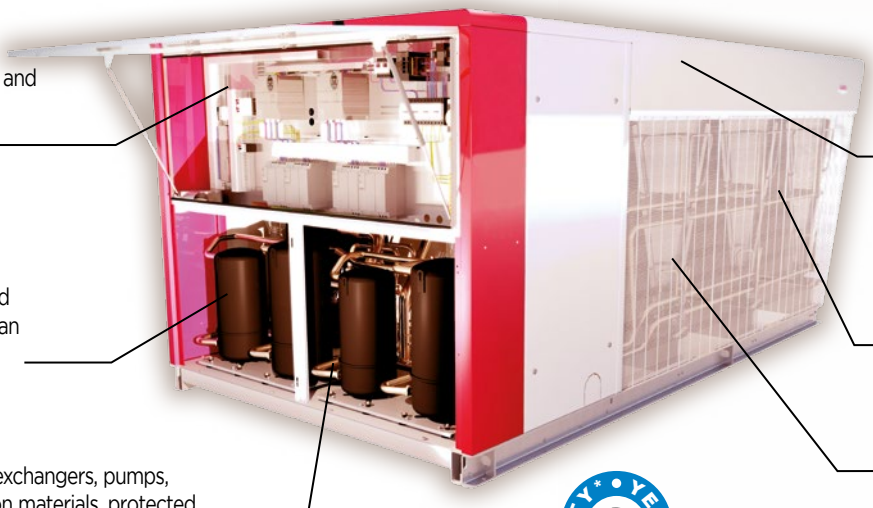
NEOSYS®

Switching enclosure with Butterfly™ door. Protection of components and persons in case of adverse weather conditions.

Multiple Compliant™ Scroll compressors, zero maintenance.

Axial and radial clearance enabling the compressor tolerate liquid hammerhead and injection of debris for an extended working life.

Technical compartment. Compressors, water heat-exchangers, pumps, thermal and noise insulation materials, protected against outdoor weather conditions and water splashing during cleaning of coils.



OWLET™ fan with ceramic blades to considerably increase fan longevity.

High corrosion-resistant, aluminium micro-channel coils. -40% less refrigerant.

V-form coils with protection guards. Protection against hailstone and impact damage.

3 YEAR WARRANTY*

- Two ranges for renovation and new installations
- Suitable for many types of sales area
- Several refrigerants available
- “Plug and Play” packaged solution for quick and easy installation

SRC - Combined recovery system

R404A R134a

Common product to airconditioning and refrigeration applications

The combined energy recovery system is a “Plug and Play” solution, developed by **LENNOX EMEA**.
In most cases, buildings equipped with food refrigeration systems waste heat outside through air cooled condensers.
The **SRC** allows to recover thermal energy rejected by the commercial refrigeration to heat the sales area, thus achieving significant energy savings over the annual heating consumption.
The **SRC** unit is equipped with a multi-tubular dual circuit exchanger using the cooling capacity available due to the closure of furniture which refreshed indirectly the sales floor in open mode, to cool it.
The return on investment depends on the type of building, installation, climatic conditions and energy costs at the place of installation.
The **SRC** solution is composed of two ranges (12 models):
"REMODEL" range and **"NEW INSTALLATION"** range.

The **"REMODEL"** range is designed for existing installations: It is designed to suit new thermal loads in an existing building (installation of doors on refrigerated display cabinets).
Heat recovery provides energy saving on winter heating consumption while using the cooling capacity excess available of the cold production plant for the refreshment in summer.

The **"NEW INSTALLATION"** range is designed for new buildings, buildings undergoing complete remodel or major extension with replacement of the complete refrigeration systems : This range takes into account the cooling and heating needs (central sizing). The energy gains realized during the heating season (heat recovery) are used to finance a portion of the facility and ensure no extra cost to refresh the sales area.

DESCRIPTION

- Multi-tubular heat exchanger with an isolated bi-circuit, specifically designed for heating and cooling.
- Compact chassis (900 mm wide max.).
- Hydraulic connection with flanges.
- Complete electrical cabinet, complying with EN-60204 standard, with a programmable controller and display.
- Complete control for heating and cooling mode with electronic expansion valve, valves, and sensors.
- Complete hydraulic module with variable flow dual pump, valves, flow switch, filters, expansion vessel.

Advanced control

- 3 control modes that can be selected through a three position manual switch:
  - Summer/Cooling mode,
  - Winter/Heating mode,
  - Dead zone.
- Variable speed dual pump regulation.
- Cooling capacity priority management.
- Freeze protection and flow switch.
- Floating head pressure management.
